

Update your new patient indicator in the Network Directory

A recent review has shown that some new patient indicators in our network directory are incorrect.

Access to accurate, up-to-date information within health plan network directories is crucial for both patients and health care professionals. For this reason, there are new federal and state regulations requiring health plans to regularly validate information on each participating provider in their directories.

Review and update your information

It is important that you review and update your new patient indicator in the CAQH database as this information impacts what is displayed in the UHCCP Directory. The new patient indicator should also match what your office is telling your potential, new and existing patients.

How to access the CAQH database:

- Existing users: Log in to your [CAQH ProView](#)
- New users: Go to [CAQH ProView](#) to create a new, secure account and review the [CAQH step-by-step video and user guide](#)
