- Xtandi (enzalutamide)

**OR**

**2.2.2.2** Provider attests that the patient is not an appropriate candidate for BOTH of the following:

- Erleada (apalutamide)
- Xtandi (enzalutamide)

**OR**

**2.3** BOTH of the following:

**2.3.1** ONE of the following:

- Disease is regional node positive (Any T, N1, M0)
- Patient is in a very-high-risk group receiving radiation therapy

**AND**

**2.3.2** ONE of the following:

- Life expectancy > 5 years
- Patient has symptomatic disease

**OR**

**2.4** ALL of the following:

**2.4.1** Disease is non-metastatic

**AND**

**2.4.2** Life expectancy > 5 years

**AND**

**2.4.3 ONE of the following:**

- Positive pelvic persistence/recurrence after radical prostatectomy (RP)
- Lymph node metastases after RP
- Studies positive for regional lymph nodes after radiation therapy

**AND**

**3 - Used in combination with prednisone**

**AND**

**4 - ONE of the following:**

- Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g. Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Vantas (histrelin), Firmagon (degarelix)]
- \Patient has had bilateral orchiectomy

| <p><b>Background</b></p> <p>Abiraterone acetate is a CPY17 inhibitor-indicated for use in combination with prednisone for the treatment of patients with metastatic castration-resistant prostate cancer and for high-risk metastatic castration-sensitive prostate cancer. Patients should also receive a gonadotropin-releasing hormone (GnRH) analog concurrently while taking abiraterone or should have had bilateral orchiectomy.</p> <p>The National Comprehensive Cancer Network (NCCN) also recommends the use of abiraterone in combination with prednisone and androgen deprivation therapy (ADT) as initial therapy for patients without metastases yet with regional node positive disease if life expectancy is greater than 5 years or symptomatic. In combination with ADT and radiation therapy as initial therapy in patients in very-high-risk group if life expectancy is greater than 5 years or symptomatic. In combination with prednisone and ADT if life expectancy is greater than 5 years for patients with non-metastatic positive pelvic persistence/recurrence after prostatectomy, non-metastatic undetectable PSA after radical prostatectomy and non-metastatic PSA recurrence or positive digital rectal exam. The NCCN also recommends the use of abiraterone in salivary gland tumors useful in certain circumstances as single-agent systemic therapy (used in combination with prednisone) for androgen receptor positive recurrent disease.</p> <p><b>Additional Clinical Rules</b></p> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class. Supply limits may be in place.</li> </ul> |

## 1 . Indications

**Drug Name: Actemra (tocilizumab), Actemra ACTPen (tocilizumab), Tyenne (tocilizumab-aazg)**

**Rheumatoid Arthritis** Indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

**Giant Cell Arteritis** Indicated for giant cell arteritis in adult patients.

**Polyarticular Juvenile Idiopathic Arthritis** Indicated for the treatment of active polyarticular juvenile idiopathic arthritis (PJIA) in patients 2 years of age and older.

**Active Systemic Juvenile Idiopathic Arthritis** Indicated for the treatment of active systemic juvenile idiopathic arthritis (SJIA) in patients 2 years of age and older.

**Systemic Sclerosis-Associated Interstitial Lung Disease** Indicated for slowing the rate of decline in pulmonary function in adult patients with systemic sclerosis-associated interstitial lung disease (SSc-ILD).

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                  |

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of moderately to severely active rheumatoid arthritis</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - ONE of the following:</p> <p><b>2.1</b> History of failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at</p> |                           |

maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)^

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]

**AND**

**3 - ONE of the following:**

**3.1** History of failure, contraindication, or intolerance to TWO of the following preferred products (Document drug, date, and duration of trial):

- One of the formulary adalimumab products [b]
- Simponi (golimumab)
- Olumiant (baricitinib)
- Rinvoq (upadacitinib)
- Xeljanz/Xeljanz XR (tofacitinib)

**OR**

**3.2 BOTH of the following:**

**3.2.1** Patient is currently on Actemra or Tyenne therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

**AND**

**3.2.2** Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Actemra or Tyenne\*

**AND**

**4** - Patient is not receiving Actemra or Tyenne in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**5** - Prescribed by or in consultation with a rheumatologist

| Diagnosis       | Systemic sclerosis-associated interstitial lung disease |
| Approval Length | 12 month(s)                                             |
| Therapy Stage   | Initial Authorization                                   |
| Guideline Type  | Prior Authorization                                     |

### Approval Criteria

1 - Diagnosis of systemic sclerosis-associated interstitial lung disease (SSc-ILD) as documented by ALL of the following criteria:[4]

1.1 ONE of the following:

1.1.1 Skin thickening of the fingers of both hands extending proximal to the metacarpophalangeal joints

**OR**

1.1.2 At least TWO of the following:

- Skin thickening of the fingers (e.g., puffy fingers, sclerodactyly of the fingers)
- Fingertip lesions (e.g., digital tip ulcers, fingertip pitting scars)
- Telangiectasia
- Abnormal nailfold capillaries
- Pulmonary arterial hypertension
- Raynaud's phenomenon
- SSc-related autoantibodies (e.g., anticentromere, anti-topoisomerase I, anti-RNA polymerase III)

**AND**

**1.2** Presence of interstitial lung disease as determined by finding evidence of pulmonary fibrosis on HRCT, involving at least 10% of the lungs

**AND**

**2** - Patient is not receiving Actemra or Tysabri in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**3** - Prescribed by or in consultation with a pulmonologist

## Approval Criteria

1 - Documentation of positive clinical response to Actemra or Tyenne therapy

**AND**

2 - Patient is not receiving Actemra or Tyenne in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Tocilizumab [Actemra (tocilizumab) and Tyenne (tocilizumab-aazg)] is an interleukin-6 (IL-6) receptor antagonist, available in both an intravenous and a subcutaneous formulation.

Subcutaneous formulations of tocilizumab are indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs). It is also indicated for giant cell arteritis in adult patients, the treatment of active polyarticular juvenile idiopathic arthritis (PJIA) and active systemic juvenile idiopathic arthritis (SJIA) in patients 2 years of age and older, and for slowing the rate of decline in pulmonary function in adult patients with systemic sclerosis-associated interstitial lung disease (SSc-ILD).

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Actimmune (interferon gamma-1b)</b>                                                                                                             |
| <b>Chronic granulomatous disease</b> Indicated for the treatment of chronic granulomatous disease to reduce the frequency and severity of serious infections. |
| <b>Osteopetrosis</b> Indicated in the treatment of severe, malignant osteopetrosis to delay the time to progression.                                          |
| <b>Other Uses:</b> The National Cancer Comprehensive Network (NCCN) recommends use of Actimmune in mycosis fungoides (MF) and Sezary syndrome (SS).           |

| <b>Background:</b><br><br>Actimmune (interferon gamma-1b) is indicated for reducing the frequency and severity of serious infections associated with chronic granulomatous disease (CGD). It is also indicated for delaying time to disease progression in patients with severe, malignant osteopetrosis (SMO). The National Cancer Comprehensive Network (NCCN) recommends use of Actimmune in mycosis fungoides (MF) and Sézary syndrome (SS).<br><br><b>Additional Clinical Rules:</b> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class</li> </ul> |

- Supply limits may apply.

| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 12 month(s)               |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Initial Authorization     |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Prior Authorization       |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderately to severely active rheumatoid arthritis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p><b>2.1</b> History of failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at the maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)</p> |                           |

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

**OR**

**2.3** BOTH of the following:

- Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab\*

**AND**

**3** - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving adalimumab in combination with another targeted immunomodulator. [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**5** - Prescribed by or in consultation with a rheumatologist

### Approval Criteria

**1** - Diagnosis of moderately to severely active polyarticular juvenile idiopathic arthritis

**AND**

**2** - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**3** - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Simponi (golimumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Otezla (apremilast), Rinvoq (upadacitinib)]

**OR**

**2.3 BOTH of the following:**

- Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab\*

**AND**

**3** - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**5** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Rheumatologist

| Product Name: Adalimumab [a] |                       |
| Diagnosis                    | Plaque Psoriasis      |
| Approval Length              | 12 month(s)           |
| Therapy Stage                | Initial Authorization |
| Guideline Type               | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate to severe chronic plaque psoriasis

**AND**

**2** - ONE of the following:

**2.1** ALL of the following:

**2.1.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis

**AND**

**2.1.2** History of failure to ONE of the following topical therapies, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Coal tar

**AND**

**2.1.3** History of failure to a 3 month trial of methotrexate at the maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**OR**

**2.3 BOTH of the following:**

- Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab\*

**AND**

**3** - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**5** - Prescribed by or in consultation with a dermatologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

[b] For a list of preferred adalimumab products please reference drug coverage tools

\* Patients requesting initial authorization who were established on therapy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from a manufacturer sponsored program SHALL BE REQUIRED to meet initial authorization criteria as if patient were new to therapy.

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of active ankylosing spondylitis</p> |                             |

**AND**

**2 - ONE of the following:**

**2.1** History of failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trials)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**OR**

**2.3 BOTH of the following:**

- Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab\*

**AND**

**3 -** If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**4 -** Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

| Guideline Type                                                                                                                                                                                                                                                                                                                                                          | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderately to severely active ulcerative colitis</p> <p><b>AND</b></p> <p>2 - ONE of the following:</p> <p><b>2.1</b> Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine)</p> <p><b>OR</b></p> |                       |

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as documented by claims history or submission medical records (Document drug, date, and duration of therapy) [e.g., Simponi (golimumab), ustekinumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**OR**

**2.3** BOTH of the following:

- Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab\*

**AND**

**3** - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist

| <p><b>Approval Criteria</b></p> |                               |

**1 - Diagnosis of moderate to severe hidradenitis suppurativa (i.e., Hurley Stage II or III)**

**AND**

**2 - ONE of the following:**

**2.1** History of failure to at least ONE oral antibiotic (e.g., doxycycline, clindamycin, rifampin) at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

**OR**

**2.2 BOTH of the following:**

- Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab\*

**AND**

**3 -** If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**4 -** Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**5 - Prescribed by or in consultation with a dermatologist**

## **Approval Criteria**

**1** - Diagnosis of non-infectious uveitis

**AND**

**2** - Uveitis is classified as ONE of the following:

- intermediate
- posterior
- panuveitis

**AND**

**3** - ONE of the following:

**3.1** BOTH of the following:

- History of failure to at least ONE corticosteroid (e.g., prednisolone, prednisone) at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)
- History of failure to at least ONE systemic non-biologic immunosuppressant (e.g., methotrexate, cyclosporine, azathioprine, mycophenolate) at up to a maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

**OR**

**3.2** BOTH of the following:

- Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab\*

**AND**

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**4** - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

**AND**

**5** - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**6** - Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Ophthalmologist

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

### 3 . Background

#### Clinical Practice Guidelines

##### Medication:

Adalimumab: Humira® (adalimumab), Abrilada™ (adalimumab-afzb), Adalimumab-aacf (unbranded Idacio), Adalimumab-aaty (unbranded Yuflyma), Adalimumab-adaz (unbranded Hyrimoz), Adalimumab-adbm (unbranded Cyltezo), Adalimumab-fkjp (unbranded Hulio), Adalimumab-ryvk (unbranded Simlandi), Amjevita™ (adalimumab-atto), Cyltezo®, (adalimumab-adbm), Hadlima™ (adalimumab-bwwd), Hulio® (adalimumab-fkjp), Hyrimoz® (adalimumab-adaz), Idacio® (adalimumab-aacf), Simlandi® (adalimumab-ryvk), Yuflyma® (adalimumab-aaty), Yusimry™ (adalimumab-aqvh)

#### Benefit/Coverage/Program Information

##### Background:

Adalimumab is a tumor necrosis factor (TNF) blocker indicated for:

- Rheumatoid Arthritis (RA): reducing signs and symptoms, inducing major clinical response, inhibiting the progression of structural damage, and improving physical function in adult patients with moderately to severely active RA. Adalimumab can be used alone or in combination with methotrexate or other non-biologic disease-modifying anti-rheumatic drugs (DMARDs).

- Juvenile Idiopathic Arthritis (JIA): reducing signs and symptoms of moderately to severely active polyarticular JIA in patients 2 years of age and older. Adalimumab can be used alone or in combination with methotrexate.
- Psoriatic Arthritis (PsA): reducing signs and symptoms, inhibiting the progression of structural damage, and improving physical function in adult patients with active PsA.
- Ankylosing Spondylitis (AS): reducing signs and symptoms in adult patients with active AS. Adalimumab can be used alone or in combination with non-biologic DMARDs.
- Crohn's Disease (CD): treatment of moderately to severely active Crohn's disease in adults and pediatric patients 6 years of age and older.
- Ulcerative Colitis (UC): treatment of moderately to severely active ulcerative colitis in adults and pediatric patients 5 years of age and older.
- Plaque Psoriasis (Ps): treatment of adult patients with moderate to severe chronic plaque psoriasis who are candidates for systemic therapy or phototherapy, and when other systemic therapies are medically less appropriate.
- Hidradenitis Suppurativa (HS): treatment of moderate to severe hidradenitis suppurativa in patients 12 years of age and older.
- Uveitis (UV): treatment of non-infectious intermediate, posterior, and panuveitis in adults and pediatric patients 2 years of age and older.

In ulcerative colitis, effectiveness has not been established in patients who have lost response to or were intolerant to TNF blockers.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**OR**

**3.2** BOTH of the following:

**3.2.1** Patient is currently on Adbry therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

**AND**

**3.2.2** Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Leo Pharma dermatology patient access program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Adbry\*

**AND**

**4** - Patient is NOT receiving Adbry in combination with EITHER of the following:

- Biologic immunomodulator [e.g., Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemoli-zumab-ilto)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

**5** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

\*Patients requesting initial authorization who were established on therapy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from the Leo Pharma dermatology patient access program shall be required to meet initial auth

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

| Adbry (tralokinumab-ldrm) is an interleukin-13 antagonist indicated for the treatment of moderate to severe atopic dermatitis in adult patients whose disease is not adequately controlled with topical prescription therapies or when those therapies are not advisable. Adbry can be used with or without topical corticosteroids. |                                      |                                 |              |

## 1 . Criteria

|                                                              |                          |
|--------------------------------------------------------------|--------------------------|
| Product Name:Medications requested for off-label indications |                          |
| Approval Length                                              | 12 month(s)              |
| Guideline Type                                               | Administrative Off-Label |

## **Approval Criteria**

**1** - A request for an off-label indication will be approved based on one of the following:

**1.1** The diagnosis is supported in DRUGDEX and one of the following:

**1.1.1** The drug has a Strength of Recommendation in the FDA Uses/Non-FDA Uses section rating of Class I, Class IIa, or Class IIb (see DRUGDEX Strength of Recommendation table in Background section)

**OR**

**1.1.2** Both of the following:

- The drug has a Strength of Recommendation of III or Class Indeterminate (see DRUGDEX Strength of Recommendation table in Background section)
- Efficacy is rated as "Effective" or "Evidence Favors Efficacy" (see DRUGDEX Efficacy Rating and Prior Authorization Approval Status table in Background section)

**OR**

**1.1.3** The diagnosis is supported in any other section in DRUGDEX. (Note: Supported use is considered to mean positive language in any section of the compendia that clearly indicates the drug has efficacy or is beneficial for an off-label use. If there is conflicting evidence, [e.g., use is not supported in the FDA Uses/Non-FDA Uses sections of DRUGDEX but has favorable support elsewhere within DRUGDEX] the favorable support would take precedence and the use would be accepted as a supported use)

**OR**

**1.2** The diagnosis is supported as a use in Clinical Pharmacology

**OR**

**1.3** The diagnosis is supported as a use in American Hospital Formulary Service Drug Information (AHFS DI)

**OR**

**1.4** The diagnosis is supported as a use in the National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium with a Category of Evidence and Consensus of 1, 2A, or 2B (see NCCN Categories of Evidence and Consensus table in Background section)

**OR**

**1.5** The diagnosis is supported as a use in United States Pharmacopoeia-National Formulary (USP-NF)

**OR**

**1.6** The diagnosis is supported as a use in Drug Facts and Comparisons

**OR**

**1.7** The diagnosis is supported as a use in Wolters Kluwer Lexi-Drugs

**OR**

**1.8** The diagnosis is supported in published practice guidelines and treatment protocols

**OR**

**1.9** The diagnosis is supported in peer-reviewed medical literature, including randomized clinical trials, outcomes, research data and pharmacoeconomic studies unless there is clear and convincing contradictory evidence presented in a major peer-reviewed medical journal

**AND**

**2** - The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (see technician note for the Exclusions and Limitations Grid URL).

| <p><b>BACKGROUND:</b></p> <p>This program is to be administered to medications of various formulary statuses where the requested use is not FDA approved. This policy is intended to ensure that medications subject to prior authorization, including those not listed on the Plan Formulary/PDL, are utilized in accordance with FDA indications and uses found in the compendia of current literature. This policy aims to foster cost-effective, first-line use of available formulary/PDL medications.</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>Supply limits may be in place.</li> </ul> |                                                                                                          |

**1 - Member is new to plan (within first 90 days of eligibility with the plan)\*\***

**AND**

**2 - ONE of the following:**

**2.1 BOTH of the following:**

- Requested drug is FDA-approved for the condition being treated
- Additional requirements listed in the "Indications and Usage" sections of the prescribing information (or package insert) have been met (e.g.: first line therapies have been tried and failed, any testing requirements have been met, etc.)

**OR**

**2.2 Meets Off-Label Administrative guideline criteria**

**AND**

**3 - Provider attestation to use of the requested medication prior to enrollment in the plan**

Notes

\*Note: Policy is to be applied if drug specific criteria are not met.

\*\*New to plan includes new members within the first 90 days of coverage, existing members who moved to a new state and are within the first 90 days of coverage under their new state IFP plan, and members had a lapse in coverage/re-enrolled and are within the first 90 days of coverage under their most recent enrollment.

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

This program is to be administered to members who are new to plan (within the past 90 days) and who have an authorization from a prior plan to allow a transitional fill for continuation of therapy.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### Approval Criteria

1 - BOTH of the following:

1.1 Diagnosis of ONE of the following:

- Neuroendocrine tumors of gastrointestinal origin
- Neuroendocrine tumors of lung origin

- Neuroendocrine tumors of thymic origin

**AND**

**1.2 ONE of the following:**

- Disease is unresectable
- Disease is locally advanced
- Disease is metastatic

**OR**

**2 - BOTH of the following:**

**2.1 Diagnosis of neuroendocrine tumors of pancreatic origin**

**AND**

**2.2 ONE of the following:**

- Used for the management of recurrent, locoregional advanced and/or metastatic disease
- Used for management to stabilize glucose levels of locoregional insulinoma

**OR**

**3 - ALL of the following:**

**3.1 Diagnosis of well-differentiated, grade 3 neuroendocrine tumor**

**AND**

**3.2 ONE of the following:**

- Disease is unresectable
- Disease is locally advanced
- Disease is metastatic

- Disease is hormone receptor positive (HR+) [i.e., estrogen-receptor-positive (ER+) or progesterone-receptor-positive (PR+)]
- Breast cancer is considered inflammatory

**AND**

**4 -** Disease is human epidermal growth factor receptor 2 (HER2)-negative

**AND**

**5 -** ONE of the following:

**5.1** Patient is a postmenopausal woman

**OR**

**5.2** BOTH of the following

- Patient is a premenopausal woman
- Patient is being treated with ovarian ablation/suppression

**OR**

**5.3** Patient is male

**AND**

**6 -** Used in combination with one of the following:

- Exemestane if progressed within 12 months or on a non-steroidal aromatase inhibitor [e.g., Arimidex (anastrozole), Femara (letrozole)]
- Fulvestrant
- Tamoxifen

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

| <p><b>Background:</b></p> <p>Afinitor® (everolimus) is a kinase inhibitor indicated for the treatment of postmenopausal women with advanced hormone receptor-positive, HER2-negative breast cancer in combination with Aromasin® (exemestane) after failure of treatment with Femara® (letrozole) or Arimidex® (anastrozole); in adults with progressive neuroendocrine tumors of pancreatic origin (PNET) and adults with progressive, well-differentiated, non-functional neuroendocrine tumors (NET) of gastrointestinal (GI) or lung origin that are unresectable, locally advanced or metastatic; adults with advanced renal cell carcinoma (RCC) after failure of treatment with Sutent® (sunitinib) or Nexavar® (sorafenib); adults with renal angiomyolipoma and tuberous sclerosis complex (TSC), not requiring immediate surgery; treatment of adult and pediatric patients aged 1 year and older with TSC who have subependymal giant cell astrocytoma (SEGA) that requires therapeutic intervention but cannot be curatively resected; and for the adjunctive treatment of adult and pediatric patients aged 2 years and older with TSC associated partial-onset seizures.<sup>1</sup> Torpenz is indicated for postmenopausal women with advanced hormone receptor-positive, HER2-negative breast cancer in combination with exemestane after failure of treatment with letrozole or anastrozole, for adults with renal angiomyolipoma and tuberous sclerosis complex (TSC), not requiring immediate surgery, and for adult and pediatric patients aged 1 year and older with TSC who have subependymal giant cell astrocytoma (SEGA) that requires therapeutic intervention but cannot be curatively resected.</p> <p>Afinitor is not indicated for the treatment of patients with functional carcinoid tumors.</p> <p>The National Cancer Comprehensive Network (NCCN) also recommends use of Afinitor in invasive and inflammatory breast cancer, Waldenström's macroglobulinemia / lymphoplasmacytic lymphoma, neuroendocrine tumors, kidney cancer, soft tissue sarcomas, osteosarcomas, gastrointestinal stromal tumors, thymomas and thymic carcinomas, Hodgkin lymphoma, follicular, oncocytic, and papillary thyroid carcinomas, subependymal giant cell astrocytoma (SEGA), meningioma, histiocytic neoplasms, and endometrial carcinoma.<sup>2</sup></p> |

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4/28/2025 | Annual review. Updated criteria for neuroendocrine tumors, breast cancer, Hodgkin lymphoma, thyroid cancer, and gastrointestinal stromal tumors per NCCN guidelines. Updated section on endometrial carcinoma and renamed uterine neoplasms. Consolidated sections for meningioma and subependymal giant cell astrocytoma (SEGA) and renamed central nervous system cancer. Consolidated sections for tuberous sclerosis complex (TSC)-associated renal cell carcinoma and advanced renal cell carcinoma and renamed kidney cancer. |

|----------------------------------|-----------------------------------|
| <b>Product Name: Agamree [a]</b> |                                   |
| Diagnosis                        | Duchenne Muscular Dystrophy (DMD) |
| Guideline Type                   | Non Formulary                     |

### Approval Criteria

1 - Published clinical evidence shows Agamree is likely to produce equivalent therapeutic results as other available corticosteroids (e.g., prednisone); therefore, Agamree is not medically necessary for treatment of Duchenne muscular dystrophy.

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Agamree (vamorolone) is a corticosteroid indicated for the treatment of Duchenne muscular dystrophy (DMD) in patients 2 years of age and older. [1]

The UnitedHealthcare Pharmacy and Therapeutics Committee has determined that Agamree is Therapeutically Equivalent to prednisone in the treatment of DMD. Data for FDA approval from relatively short-term randomized controlled trials were limited; and while adverse effect profiles may differ among glucocorticoids, vamorolone does not offer a clear advantage over other glucocorticoids for DMD with respect to efficacy and overall safety. [2-5]

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Alecensa® (alectinib) is a kinase inhibitor indicated for the treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive, metastatic non-small cell lung cancer (NSCLC) as detected by an FDA-approved test and for adjuvant treatment in adult patients following tumor resection of ALK-positive NSCLC (tumors  $\geq$  4 cm or node positive) as detected by an FDA-approved test. The NCCN also recommends Alecensa for ALK-fusion targeted relapsed/refractory, symptomatic Erdheim-Chester Disease, as second-line or initial palliative intent therapy and subsequent therapy for relapsed/refractory ALK+ anaplastic large cell lymphoma (ALCL), relapsed or refractory ALK-positive large B-Cell lymphoma, ALK-positive metastatic brain cancer from NSCLC, ALK-rearrangement positive pediatric diffuse high-grade glioma, and inflammatory myofibroblastic tumors with ALK translocation.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Aptiom (eslicarbazepine acetate), Briviact (brivaracetam), Vimpat (lacosamide) and Xcopri (cenobamate) are indicated in the treatment of partial-onset seizures. Vimpat is also indicated as adjunctive therapy in the treatment of primary generalized tonic-clonic seizures.

Banzel (rufinamide), Onfi (clobazam) and Sympazan (clobazam) are indicated for the adjunctive treatment of seizures associated with Lennox-Gastaut syndrome (LGS). There is some clinical evidence to support the use of clobazam for refractory partial onset seizures.

Diacomit (stiripentol) is indicated for seizures associated with Dravet syndrome in patients taking clobazam.

Epidiolex (cannabidiol solution) is indicated for seizures associated with Lennox-Gastaut syndrome, Dravet syndrome, or tuberous sclerosis complex.

Fintepla (fenfluramine) is indicated for seizures associated with Lennox-Gastaut syndrome and Dravet syndrome.

Fycompa (perampanel) is indicated for the treatment of partial-onset seizures with or without secondarily generalized seizures and as adjunctive therapy for the treatment of primary generalized tonic-clonic seizures.

Motpoly XR is indicated for the treatment of partial-onset seizures and as adjunctive therapy in the treatment of primary generalized tonic-clonic seizures in adults and in pediatric patients weighing at least 50 kg.

Nayzilam (midazolam) is indicated for the acute treatment of intermittent, stereotypic episodes of frequent seizure activity (i.e., seizure clusters, acute repetitive seizures) that are distinct from a patient's usual seizure pattern.

Sabril (vigabatrin), Vigadone (vigabatrin), Vigafyde (vigabatrin) and Vigpoder (vigabatrin) are indicated as adjunctive therapy for refractory complex partial seizures in patients who have inadequately responded to several alternative treatments and for infantile spasms for whom the potential benefits outweigh the risk of vision loss.

Adjunctive therapy is defined as treatment administered in addition to another therapy. Coverage will not be provided for Banzel as primary treatment.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Aqneursa (levacetylleucine) is indicated for the treatment of neurological manifestations of Niemann-Pick disease type C (NPC) in adults and pediatric patients weighing ≥15 kg.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

**AND**

**6** - In vitro susceptibility testing of recent (within 6 months) positive culture documents that the MAC isolate is susceptible to amikacin with a minimum inhibitory concentration (MIC) of less than or equal to 64 mcg/mL

**AND**

**7** - Prescribed by or in consultation with one of the following:

- Infectious disease specialist
- Pulmonologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name:Arikayce [a]

Approval Length 6 month(s)

Therapy Stage Reauthorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - One of the following:

**1.1** Documentation that the patient has achieved negative respiratory cultures

**OR**

**1.2** All of the following:

**1.2.1** Patient has not achieved negative respiratory cultures while on Arikayce

**AND**

**1.2.2** Physician attestation that patient has demonstrated clinical benefit while on Arikayce

**AND**

**1.2.3** In vitro susceptibility testing of most recent (within 6 months) positive culture with available susceptibility testing documents that the MAC isolate is susceptible to amikacin with a minimum inhibitory concentration (MIC) of < 64 mcg/mL

**AND**

**1.2.4** Patient has NOT received greater than 12 months of Arikayce therapy with continued positive respiratory cultures

**AND**

**2** - Submission of medical records (e.g., chart notes, laboratory values) documenting that the patient continues to receive a multidrug background regimen containing at least two of the following agents [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]:

- Macrolide antibiotic [e.g., azithromycin, clarithromycin]
- Ethambutol
- Rifamycin antibiotic [e.g., rifampin, rifabutin]

**AND**

**3** - Prescribed by, or in consultation with one of the following:

- Infectious disease specialist
- Pulmonologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background

Arikayce is an aminoglycoside antibacterial indicated in adults who have limited or no alternative treatment options, for the treatment of *Mycobacterium avium* complex (MAC) lung disease as part of a combination antibacterial drug regimen in patients who do not achieve negative sputum cultures after a minimum of 6 consecutive months of a multidrug background regimen therapy. As only limited clinical safety and effectiveness data for Arikayce are currently available, reserve Arikayce for use in adults who have limited or no alternative treatment options. This drug is indicated for use in a limited and specific population of patients.

This indication is approved under accelerated approval based on achieving sputum culture conversion (defined as 3 consecutive negative monthly sputum cultures) by Month 6. Clinical benefit has not yet been established.

Arikayce has only been studied in patients with refractory MAC lung disease defined as patients who did not achieve negative sputum cultures after a minimum of 6 consecutive months of a multidrug background regimen therapy. The use of Arikayce is not recommended for patients with non-refractory MAC lung disease.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Transthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM) |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 12 month(s)                                                             |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Initial Authorization                                                   |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Non Formulary                                                           |
| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of transthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM)</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - ONE of the following:</b></p> <p><b>2.1</b> Documentation that the patient has a pathogenic TTR mutation (e.g., V30M)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>2.2</b> Cardiac or noncardiac tissue biopsy demonstrating histologic confirmation of ATTR amyloid deposits</p> <p style="text-align: center;"><b>OR</b></p> <p><b>2.3</b> ALL of the following:</p> <ul style="list-style-type: none"> <li>• Echocardiogram or cardiac magnetic resonance imaging suggestive of amyloidosis</li> <li>• Radionuclide imaging (99mTc-DPD, 99mTc-PYP, or 99m Tc-HMDP) showing grade 2 or 3 cardiac uptake*</li> <li>• Absence of light chain amyloidosis</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3 - Patient has New York Heart Association (NYHA) Functional Class I, II, or III heart failure</b></p> |                                                                         |

**AND**

**4** - Physician attests that the patient has an N-terminal pro-B-type natriuretic peptide (NT-proBNP) level that, when combined with signs and symptoms, is considered definitive for a diagnosis of ATTR-CM

**AND**

**5** - ONE of the following:

- History of heart failure, with at least one prior hospitalization for heart failure
- Presence of signs and symptoms of heart failure (e.g., dyspnea, edema)

**AND**

**6** - Prescribed by or in consultation with a cardiologist

**AND**

**7** - Patient is not receiving Attruby in combination with an RNA-targeted therapy for ATTR amyloidosis [i.e., Amvuttra (vutrisiran), Onpattro (patisiran), Tegsedi (inotersen), Vyndaqel/Vyndamax (tafamadis), or Wainua (eplontersen)]

|       |                                                                                                                                                                                                                                                                                  |

|--------------------------|-------------------------------------------------------------------------|
| Product Name:Attruby [a] |                                                                         |
| Diagnosis                | Transthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM) |
| Approval Length          | 12 month(s)                                                             |
| Therapy Stage            | Reauthorization                                                         |
| Guideline Type           | Non Formulary                                                           |

### Approval Criteria

**1** - Documentation that the patient has experienced a positive clinical response to Attruby (e.g., improved symptoms, quality of life, slowing of disease progression, decreased hospitalizations, etc.)

**AND**

**2** - Documentation that patient continues to have New York Heart Association (NYHA) Functional Class I, II, or III heart failure

**AND**

**3** - Prescribed by or in consultation with a cardiologist

**AND**

**4** - Patient is not receiving Attruby in combination with an RNA-targeted therapy for ATTR amyloidosis [i.e., Amvuttra (vutrisiran), Onpattro (patisiran), Tegsedi (inotersen), Vyndaqel/Vyndamax (tafamadis), or Wainua (eplontersen)]

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Attruby is a transthyretin stabilizer indicated for the treatment of the cardiomyopathy of wild-type or variant transthyretin-mediated amyloidosis (ATTR-CM) in adults to reduce cardiovascular death and cardiovascular-related hospitalization.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**AND**

**3** - Patient has been screened for underlying depression and/or anxiety. If applicable, any underlying conditions have been or will be addressed

**AND**

**4** - ONE of the following:

- The patient has a history of failure, contraindication or intolerance to a trial of tramadol IR, unless the patient is already receiving chronic opioid therapy prior to surgery for postoperative pain, or if the postoperative pain is expected to be moderate to severe and persist for an extended period of time
- Patient is new to plan and currently established on Belbuca or Butrans for at least the past 30 days

**AND**

**5** - If the request for neuropathic pain (examples of neuropathic pain include neuralgias or neuropathies), ONE of the following:

**5.1** BOTH of the following:

- Unless it is contraindicated, the patient has not exhibited an adequate response to 8 weeks of treatment with gabapentin titrated to a therapeutic dose. (Document date of trial)
- Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose. (Document drug and date of trial)

**OR**

**5.2** The patient is new to the plan and is currently established on the requested long-acting opioid therapy for at least the past 30 days

|  | issued and a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quantity for transition to an alternative treatment. |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### 3 . Background

#### Benefit/Coverage/Program Information

##### Additional Clinical Rules:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

##### Background:

Buprenorphine is a partial opioid agonist. Belbuca and Butrans are buprenorphine products indicated for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment for which alternative treatment options are inadequate. Similar to other long-acting opioids, the use of Butrans and Belbuca should be reserved for use in patients for whom alternative treatment options (e.g. non-opioid analgesics or immediate-release opioids) are ineffective, not tolerated, or inadequate to provide sufficient management of pain. Belbuca and Butrans are not indicated as as-needed (prn) analgesics.

UnitedHealthcare employs opioid safety edits at point-of-sale (POS) to prompt prescribers and pharmacists to conduct additional safety reviews to determine if the member's opioid use is appropriate and medically necessary. Development of opioid safety edit specifications, to include cumulative MME thresholds, are determined by the plan taking into consideration clinical guidelines, regulatory/state requirements, utilization and P&T Committee feedback.

**1 - Diagnosis of active lupus nephritis**

**AND**

**2 - Patient is currently receiving standard immunosuppressive therapy for systemic lupus erythematosus [e.g., hydroxychloroquine, chloroquine, prednisone, azathioprine, methotrexate]**

**AND**

**3 - Patient does NOT have severe active central nervous system lupus**

**AND**

**4 - Patient is not receiving Benlysta in combination with ANY of the following:**

- Targeted Immunomodulator [e.g., Enbrel (etanercept), Humira (adalimumab), Cimzia (certolizumab), Kineret (anakinra)]
- Lupkynis (voclosporin)
- Saphnelo (anifrolumab-fnia)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

**Product Name: Benlysta [a]**

**Diagnosis** Active Lupus Nephritis

**Approval Length** 12 month(s)

**Therapy Stage** Reauthorization

**Guideline Type** Prior Authorization

**Approval Criteria**

**1 - Documentation of positive clinical response to Benlysta therapy**

**AND**

**2** - Patient is not receiving Benlysta in combination with ANY of the following:

- Targeted Immunomodulator [e.g., Enbrel (etanercept), Humira (adalimumab), Cimzia (certolizumab), Kineret (anakinra)]
- Lupkynis (voclosporin)
- Saphnelo (anifrolumab-fnia)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Benlysta is a B-lymphocyte stimulator (BLyS)-specific inhibitor indicated for the treatment of patients aged 5 years and older with active systemic lupus erythematosus (SLE) who are receiving standard therapy and in patients aged 5 years and older with active lupus nephritis who are receiving standard therapy.

Limitations of Use: The efficacy of Benlysta has not been evaluated in patients with severe active central nervous system lupus. Use of Benlysta is not recommended in this situation.

This program applies to the subcutaneous formulation of belimumab.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture is greater than 30%, hip fracture is greater than 4.5%)]

- Patient has a history of failure, intolerance or contraindication to other available osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate)

**AND**

**3 - ONE of the following:**

**3.1** Treatment duration has not exceeded a total of 24 months of cumulative use of parathyroid hormone analogs (e.g., Bonsity, Teriparatide Injection, Forteo, Tymlos)

**OR**

**3.2 BOTH of the following:**

- Patient is currently or has previously been treated with parathyroid hormone analogs (e.g., Bonsity, Teriparatide Injection, Forteo, Tymlos)
- The prescriber attests that the patient remains at or has returned to having a high risk for fracture

**AND**

**4 - Patient has a history of failure, intolerance or contraindication to Tymlos**

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Patient is at high risk of fracture [e.g., recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture >30%, hip fracture >4.5%)]
- Patient has a history of failure, intolerance or contraindication to other available osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate)

**AND**

**4 - ONE of the following:**

**4.1** Treatment duration has not exceeded a total of 24 months of cumulative use of parathyroid hormone analogs (e.g., Bonsity, Teriparatide Injection, Forteo, Tymlos)

**OR**

**4.2 BOTH of the following:**

- Patient is currently or has previously been treated with parathyroid hormone analogs (e.g., Bonsity, Teriparatide Injection, Forteo, Tymlos)
- The prescriber attests that the patient remains at or has returned to having a high risk for fracture

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Bonsity (teriparatide), Forteo (teriparatide) and Teriparatide Injection (teriparatide) are recombinant human parathyroid hormone with three FDA approved indications:<sup>1-2,5</sup></p> <p><b>Treatment of postmenopausal patients with osteoporosis at high risk of fracture :</b></p> <p>Bonsity, Forteo and Teriparatide Injection are indicated for the treatment of postmenopausal patients with osteoporosis who are at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.</p> <p><b>Increase of bone mass in men with primary or hypogonadal osteoporosis at high risk for fracture:</b></p> <p>Bonsity, Forteo and Teriparatide Injection are indicated to increase bone mass in patients with primary or hypogonadal osteoporosis at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.</p> <p><b>Treatment of patients with glucocorticoid-induced osteoporosis at high risk for fracture:</b></p> |

Bonsity, Forteo and Teriparatide Injection are indicated for the treatment of patients with osteoporosis associated with sustained systemic glucocorticoid therapy (daily dosage equivalent to 5 mg or greater of prednisone) at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.

Bonsity, Forteo and Teriparatide Injection for more than 2 years during a patient's lifetime should only be considered if a patient remains at or has returned to having a high risk for fracture.<sup>1-2,5</sup>

The American Association of Clinical Endocrinologists/American College of Endocrinology (AACE/ACE) recommend the use of teriparatide be considered for patients unable to use oral therapy and as initial therapy for patients at very high fracture risk defined as the following: patients with a recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture >30%, hip fracture >4.5%) or other validated fracture risk algorithm to be at very high fracture risk.<sup>3</sup> Additionally, the AACE/ACE and Endocrine Society both recommend to limit treatment with teriparatide to 2 years.<sup>3-4</sup>

Coverage will be provided for members who meet the above criteria.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Bosulif (bosutinib) is a kinase inhibitor indicated for the treatment of adult and pediatric patients 1 year of age and older with chronic phase Philadelphia-positive chronic myelogenous leukemia (Ph+ CML), newly diagnosed or resistant or intolerant to prior therapy. Bosulif is also indicated for the treatment of adult patients with accelerated, or blast phase Ph+ CML with resistance or intolerance to prior therapy. [1]

The National Comprehensive Cancer Network (NCCN) recommends use of Bosulif in follow-up therapy in CML after primary treatment with asciminib, imatinib, dasatinib, or nilotinib. NCCN also recommends Bosulif as primary treatment of CML in accelerated phase as a single agent, in combination with induction chemotherapy for lymphoid blast phase or myeloid blast phase, in combination with steroids for CML in lymphoid blast phase if not a candidate for induction chemotherapy, for CML in myeloid blast phase as a single agent if not a candidate for induction chemotherapy, as maintenance therapy with consolidation chemotherapy for non-candidates for allogeneic hematopoietic stem cell transplant (HCT) in remission for BP-CML, for CML patients that are post-transplant experiencing a cytogenetic or molecular relapse, for Philadelphia-positive acute lymphoblastic leukemia, and for treatment of myeloid/lymphoid neoplasms with eosinophilia and tyrosine kinase fusion genes. [2]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Vulvovaginal candidiasis</b> Indicated for the treatment of adult and post-menarchal pediatric females with vulvovaginal candidiasis (VVC). |

## 2 . Criteria

|                                     |                                             |
|-------------------------------------|---------------------------------------------|
| <b>Product Name:</b> Brexafemme [a] |                                             |
| Diagnosis                           | Treatment of Vulvovaginal candidiasis (VVC) |
| Approval Length                     | 3 month(s)                                  |
| Guideline Type                      | Non Formulary                               |

### Approval Criteria

1 - Diagnosis of vulvovaginal candidiasis (VVC)

**AND**

2 - One of the following:

2.1 Confirmed azole resistance demonstrated by culture and susceptibility testing

**OR**

2.2 Both of the following:

- Other causes (including but not limited to bacterial vaginosis or trichomoniasis) have been ruled out
- Failure of a 7-day course of oral fluconazole therapy defined as 100-mg, 150-mg, or 200-mg taken orally every third day for a total of 3 doses [days 1, 4, and 7] for the current episode of VVC

**AND**

3 - Prescribed by or in consultation with one of the following:

- Infectious disease physician
- Obstetrician/Gynecologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Brexafemme [a]

Diagnosis Recurrent vulvovaginal candidiasis (RVVC)

Approval Length 6 month(s)

| <b>Background:</b><br><br><p>Brukinsa (zanubrutinib) is a kinase inhibitor indicated for the treatment of patients with mantle cell lymphoma (MCL) who have received at least one prior therapy, relapsed or refractory marginal zone lymphoma (MZL) who have received at least one anti-CD20-based regimen, and relapsed or refractory follicular lymphoma (FL), in combination with obinutuzumab, after two or more lines of systemic therapy. These indications are approved under accelerated approval based on overall response rate. Continued approval for these indications may be contingent upon verification and description of clinical benefit in a confirmatory trial. Brukinsa is also indicated for the treatment of Waldenström's macroglobulinemia (WM) and chronic lymphocytic</p> |

leukemia (CLL) or small lymphocytic lymphoma (SLL).

NCCN recommends Brukinsa for relapsed/refractory hairy cell leukemia and as second-line and subsequent therapy for extranodal marginal zone lymphoma (EMZL) of the stomach, extranodal marginal zone lymphoma of nongastric sites (noncutaneous), nodal marginal zone, and splenic marginal zone lymphoma lymphomas.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Sodium Phenylbutyrate</b>                                                                                                                                                                                                                                        |
| <b>Urea cycle disorders</b> Indicated as adjunctive therapy in the chronic management of patients with urea cycle disorders involving deficiencies of carbamylphosphate synthetase (CPS), ornithine transcarbamylase (OTC), or argininosuccinic acid synthetase (AS).          |
| <b>Neonatal-onset deficiency</b> Indicated in all patients with neonatal-onset deficiency (complete enzymatic deficiency, presenting within the first 28 days of life).                                                                                                        |
| <b>Late-onset disease (partial enzymatic deficiency, presenting after the first month of life)</b> Indicated in patients with late-onset disease (partial enzymatic deficiency, presenting after the first month of life) who have a history of hyperammonemic encephalopathy. |

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                  |

| <p><b>Background:</b></p> <p>Sodium phenylbutyrate (Buphenyl) is indicated as adjunctive therapy in the chronic management of patients with urea cycle disorders involving deficiencies of carbamylphosphate synthetase (CPS), ornithine transcarbamylase (OTC), or argininosuccinic acid synthetase (AS). It is indicated in all patients with neonatal-onset deficiency (complete enzymatic deficiency, presenting within the first 28 days of life). It is also indicated in patients with late-onset disease (partial enzymatic deficiency, presenting after the first month of life) who have a history of hyperammonemic encephalopathy. Sodium phenylbutyrate must be used with dietary protein restriction and, in some cases, dietary supplements (e.g., essential amino acids, arginine, citrulline, protein-free calorie supplements).</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"><li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class</li><li>• Supply limits may be in place</li></ul> |

## 3 . Background

### Benefit/Coverage/Program Information

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

#### Background:

Bylvay® (odevixibat) is an ileal bile acid transporter inhibitor indicated for the treatment of pruritis in patients aged 3 months or older with progressive familial intrahepatic cholestasis (PFIC). Bylvay is also indicated for the treatment of pruritis in patients 12 months of age and older with Alagille syndrome (ALGS).

PFIC is a heterogeneous group of liver disorders of autosomal recessive inheritance, characterized by an early onset of cholestasis (usually during infancy) with pruritus and malabsorption, which rapidly progresses and ends up as liver failure. Pruritus is the most obvious and the most unbearable symptom in cholestasis. It has been proposed that it is

induced by the stimulation of nonmyelinated subepidermal free nerve ends because of increased serum bile acids.

ALGS is a rare genetic disorder caused by a mutation in the JAG1 or Notch2 genes which are involved in embryonic development in utero. In ALGS patients, multiple organ systems may be affected by the mutation. In the liver, the mutation causes the bile ducts to abnormally narrow, malform and reduce in number, leading to bile acid accumulation, cholestasis, and ultimately progressive liver disease. The cholestatic pruritus experienced by patients with ALGS is among the most severe in any chronic liver disease and is present in most affected children by the third year of life.

Conventional treatments for pruritis associated with PFIC or Alagille syndrome include uroxychoic acid (UCDA), antihistamines (e.g., diphenhydramine), bile acid sequestrants (e.g., cholestyramine), rifampin, naltrexone and sertraline.

*Limitation of Use:*

Bylvay may not be effective in a subgroup of PFIC type 2 patients with specific ABCB11 variants resulting in non-functional or complete absence of bile salt export pump protein (BSEP-3).

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Cabometyx (cabozantinib)</b>                                                                                                                                                                                                                                                                             |
| <b>Renal cell carcinoma (RCC)</b> Indicated for the treatment of patients with advanced renal cell carcinoma. Cabometyx is also indicated for the treatment of patients with advanced renal cell carcinoma as a first-line treatment in combination with Opdivo (nivolumab). [1]                                       |
| <b>Hepatocellular carcinoma (HCC)</b> Indicated for the treatment of patients with hepatocellular carcinoma who have been previously treated with Nexavar (sorafenib).                                                                                                                                                 |
| <b>Differentiated Thyroid Cancer</b> Indicated for the treatment of adult and pediatric patients 12 years of age and older with locally advanced or metastatic differentiated thyroid cancer (DTC) that has progressed following prior VEGFR-targeted therapy and who are radioactive iodine-refractory or ineligible. |
| <b>Neuroendocrine Tumors</b> Indicated for the treatment of adult and pediatric patients 12 years of age and older with previously treated, unresectable, locally advanced or metastatic, well-                                                                                                                        |

differentiated pancreatic neuroendocrine tumors (pNET). Indicated for the treatment of adult and pediatric patients 12 years of age and older with previously treated, unresectable, locally advanced or metastatic, well-differentiated extra-pancreatic neuroendocrine tumors (epNET).

## 2 . Criteria

|                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                  |

|                             |                                        |
|-----------------------------|----------------------------------------|
| Product Name: Cabometyx [a] |                                        |
| Diagnosis                   | Gastrointestinal Stromal Tumors (GIST) |
| Approval Length             | 12 month(s)                            |
| Therapy Stage               | Initial Authorization                  |
| Guideline Type              | Prior Authorization                    |

## Approval Criteria

1 - Diagnosis of GIST

**AND**

2 - Patient has ONE of the following:

- Gross residual disease (R2 resection)
- Unresectable primary disease
- Tumor rupture
- Recurrent/metastatic disease

**AND**

3 - Disease has progressed on ALL of the following^:

- imatinib (generic Gleevec)
- sunitinib (generic Sutent)
- Stivarga (regorafenib)
- Standard dose Qinlock (ripretinib)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.  
^Tried/failed alternative(s) are supported by FDA labeling and/or NCCN guidelines

### 3 . Background

## Benefit/Coverage/Program Information

### Background:

Cabometyx® (cabozantinib) is a kinase inhibitor indicated for the treatment of patients with advanced renal cell carcinoma (RCC); patients with advanced RCC as a first-line treatment in combination with Opdivo (nivolumab); patients with hepatocellular carcinoma (HCC) who have been previously treated with Nexavar (sorafenib tosylate); adult and pediatric patients 12 years of age and older with locally advanced or metastatic differentiated thyroid cancer (DTC) that has progressed following prior VEGFR-targeted therapy and who are radioactive iodine-refractory or ineligible; adult and pediatric patients 12 years of age and older with previously treated, unresectable, locally advanced or metastatic, well-differentiated pancreatic neuroendocrine tumors (pNET); and adult and pediatric patients 12 years of age and older with previously treated, unresectable, locally advanced or metastatic, well-differentiated extra-pancreatic neuroendocrine tumors (epNET).

The National Cancer Comprehensive Network (NCCN) recommends Cabometyx for the treatment of non-small cell lung cancer (NSCLC) with RET gene rearrangement and HCC as a single agent for progressive disease. Cabometyx is also recommended in NCCN guidelines for bone cancer, gastrointestinal stromal tumors (GIST), kidney cancer, soft tissue sarcoma and endometrial carcinoma.

### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## Approval Criteria

1 - Documentation of positive clinical response to Calquence therapy

### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background

Calquence® (acalabrutinib) is a kinase inhibitor indicated:

- In combination with bendamustine and rituximab for the treatment of adult patients with previously untreated mantle cell lymphoma (MCL) who are ineligible for autologous hematopoietic stem cell transplantation (HSCT).
- For the treatment of adult patients with MCL who have received at least one prior therapy.
- For the treatment of adult patients with chronic lymphocytic leukemia (CLL) or small lymphocytic lymphoma (SLL).

The National Comprehensive Cancer Network (NCCN) recommends the use of Calquence for the treatment of B-cell lymphomas, including splenic and nodal marginal zone lymphoma, extranodal marginal zone lymphoma (EMZL) of the stomach, extranodal marginal zone lymphoma of nongastric sites (noncutaneous), and Waldenström macroglobulinemia/lymphoplasmacytic lymphoma.

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Camzyos (mavacamten) is a cardiac myosin inhibitor indicated for the treatment of adults with symptomatic New York Heart Association (NYHA) class II-III obstructive hypertrophic cardiomyopathy (HCM) to improve functional capacity and symptoms.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Caprelsa (vandetanib)</b>                                                                                                                                                                                                                                                                                                                 |
| <b>Medullary thyroid cancer</b> Indicated for the treatment of symptomatic or progressive medullary thyroid cancer in patients with unresectable locally advanced or metastatic disease. [1] Caprelsa may be used in patients with indolent, asymptomatic or slowly progressing disease after careful consideration of the treatment related risks. [1] |
| <b>Off Label Uses: Follicular, Hurthle cell, Papillary carcinoma</b> The National Cancer Comprehensive Network (NCCN) recommends use of Caprelsa for the treatment of follicular, oncocytic, and papillary carcinomas.                                                                                                                                  |

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                       |

| <b>Background:</b><br><br>Caprelsa (vandetanib) is a kinase inhibitor indicated for the treatment of symptomatic or progressive medullary thyroid cancer in patients with unresectable locally advanced or |

metastatic disease.<sup>1</sup> The National Cancer Comprehensive Network (NCCN) recommends use of Caprelsa for the treatment of medullary, follicular, oncocytic, and papillary carcinomas.

Caprelsa may be used in patients with indolent, asymptomatic or slowly progressing disease after careful consideration of the treatment related risks.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

#### Benefit/Coverage/Program Information

**Background:**

Carbaglu (carglumic acid) is a Carbamoyl Phosphate Synthetase 1 (CPS 1) activator indicated in pediatric and adult patients as maintenance therapy for the treatment of chronic hyperammonemia due to N-acetylglutamate synthase (NAGS) deficiency, adjunctive therapy to standard of care for the treatment of acute hyperammonemia due to NAGS deficiency, and adjunctive therapy to standard of care for the treatment of acute hyperammonemia due to propionic acidemia (PA) or methylmalonic acidemia (MMA).

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Aimovig, Ajovy and Emgality 120 mg are calcitonin gene-related peptide receptor (CGRP) antagonists indicated for the preventive treatment of migraine in adults. The 100 mg strength of Emgality is indicated for the treatment of episodic cluster headache in adults.</p> |

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Approval Criteria</b></p> |                 |

1 - Documentation of positive clinical response to Cholbam therapy as evidenced by BOTH of the following:

- Improvement in liver function (e.g., aspartate aminotransferase [AST], alanine aminotransferase [ALT])
- Absence of complete biliary obstruction

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background

Cholbam (cholic acid) is a bile acid indicated for the treatment of bile acid synthesis disorders due to single enzyme defects (SEDs) and as an adjunctive treatment of peroxisomal disorders (PDs) including Zellweger spectrum disorders in patients who exhibit manifestations of liver disease, steatorrhea or complications from decreased fat soluble vitamin absorption.

Cholbam should be discontinued if liver function does not improve within 3 months of starting treatment, if complete biliary obstruction develops, or if there are persistent clinical or laboratory indicators of worsening liver function or cholestasis.

Limitation of use:

The safety and effectiveness of Cholbam on extrahepatic manifestations of bile acid synthesis disorders due to SEDs or PDs including Zellweger spectrum disorders have not been established.

##### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program.
- Supply limitations may be in place

**OR**

**2.1.2.2** Physician attests that systemic treatment with ALL of the following, FDA-approved chronic atopic dermatitis therapies is inadvisable (Document drug and contraindication rationale)^

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)
- Ebglyss (lebrikizumab-lbkz)
- Nemluvio (nemolizumab-ilto)

**OR**

**2.1.2.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria) [5]

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is currently on Cibinqo therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

**AND**

**2.2.2** Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer dermatology patient access program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Cibinqo\*

**AND**

**3** - Patient is NOT receiving Cibinqo in combination with any of the following:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]

| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 12 month(s)           |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Initial Authorization |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderately to severely active Crohn's disease</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following^:</p> <p><b>2.1</b> History of failure to ONE of the following conventional therapies at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):</p> <ul style="list-style-type: none"> <li>• Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)</li> <li>• 6-mercaptopurine (Purinethol)</li> <li>• Azathioprine (Imuran)</li> <li>• Methotrexate (Rheumatrex, Trexall)</li> </ul> <p style="text-align: center;"><b>OR</b></p> |                       |

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of Crohn's disease as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, ustekinumab, Skyrizi (risankizumab)]

**AND**

**3** - ONE of the following:

**3.1** History of failure, contraindication, or intolerance to TWO of the following preferred products (document drug, date, and duration of trial):

- One of the preferred adalimumab products [b]
- Skyrizi (risankizumab)
- Rinvoq (upadacitinib)
- One of the preferred ustekinumab products [c]

**OR**

**3.2** BOTH of the following:

- Patient is currently on Cimzia therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the UCB sponsored CIMplicity® program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Cimzia\*

**AND**

**4** - Patient is not receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist

Product Name:Cimzia [a]

Diagnosis Psoriatic Arthritis (PsA)

Approval Length 12 month(s)

Therapy Stage Initial Authorization

Guideline Type Prior Authorization

### Approval Criteria

**1 - Diagnosis of active psoriatic arthritis**

**AND**

**2 - ONE of the following:**

**2.1** History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept),

adalimumab, Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**3 - ONE of the following:**

**3.1** History of failure, contraindication, or intolerance to TWO of the following preferred products (document drug, date, and duration of trial):

- One of the preferred adalimumab products [b]
- Rinvoq (upadacitinib)
- Simponi (golimumab)
- Skyrizi (risankizumab)
- Taltz (ixekizumab)
- One of the preferred ustekinumab products [c]
- Xeljanz/Xeljanz XR (tofacitinib)

**OR**

**3.2 BOTH of the following:**

- Patient is currently on Cimzia therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the UCB sponsored CIMplicity® program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Cimzia\*

**AND**

**4 -** Patient is not receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), adalimumab, Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**5 -** Prescribed by or in consultation with ONE of the following:

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

|                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <h3>Approval Criteria</h3> <p>1 - Diagnosis of moderate to severe plaque psoriasis</p> <p><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 ALL of the following:</p> <p>2.1.1 Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis</p> |                       |

**AND**

**2.1.2** History of failure to ONE of the following topical therapies, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Coal tar

**AND**

**2.1.3** History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**AND**

**3** - ONE of the following:

**3.1** History of failure, contraindication, or intolerance to TWO of the following preferred products (document drug, date, and duration of trial):

- One of the preferred adalimumab products [b]
- Skyrizi (risankizumab)
- Taltz (ixekizumab)
- One of the preferred ustekinumab products [c]

**OR**

**3.2 BOTH of the following:**

- Patient is currently on Cimzia therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the UCB sponsored CIMplicity® program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Cimzia\*

**AND**

**4 -** Patient is not receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**5 -** Prescribed by or in consultation with a dermatologist

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Initial Authorization                               |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Prior Authorization                                 |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of non-radiographic axial spondyloarthritis</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - ONE of the following:</p> <p><b>2.1</b> History of failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trials)</p> |                                                     |

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib), Rinvoq (upadacitinib)].

**AND**

**3** - ONE of the following:

**3.1** History of failure, contraindication, or intolerance to BOTH of the following preferred products (document drug, date, and duration of trial):

- Rinvoq (upadacitinib)
- Taltz (ixekizumab)

**OR**

**3.2** BOTH of the following:

- Patient is currently on Cimzia therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the UCB sponsored CIMplicity® program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Cimzia\*

**AND**

**4** - Patient is NOT receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**5** - Prescribed by or in consultation with a rheumatologist

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.</p> |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Cimzia (certolizumab) is a tumor necrosis factor (TNF) blocker indicated for reducing signs and symptoms of Crohn's disease (CD) and maintaining clinical response in adult patients with moderately to severely active disease who have had an inadequate response to conventional therapy. Cimzia is also indicated for the treatment of adults with moderately to severely active rheumatoid arthritis (RA), treatment of adult patients with active psoriatic arthritis (PsA), treatment of adults with active ankylosing spondylitis (SpA), treatment of adults with moderate to severe plaque psoriasis (PS) who are candidates for systemic therapy or phototherapy, for the treatment of adults with active non-radiographic axial spondyloarthritis (nr-axSpA), with objective signs of inflammation, and for treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>This program is designed to provide coverage for these medications to be used in conjunction with Assisted Reproductive Technologies (ART, i.e., in vitro fertilization).</p> <p>Clomiphene citrate is a nonsteroidal fertility agent used to induce ovulation in infrequently ovulating or anovulatory women, including patients with polycystic ovary syndrome (PCOS). It is also used for controlled ovarian stimulation in ovulatory women. The drug is effective at producing ovulation in patients with an intact hypothalamic-pituitary-ovarian axis and with ovaries that are capable of functioning normally. Clomiphene therapy is not effective in patients with primary pituitary or ovarian failure. Dosage should generally not exceed 100 mg daily for 5 days. If ovulation has not occurred after 3 courses of therapy, the patient should be reevaluated. If pregnancy does not occur within a total of 6 cycles, clomiphene should be discontinued as prolonged administration is not recommended. [1-5]</p> <p>Clomiphene citrate is indicated for the treatment of ovulatory dysfunction in women desiring pregnancy. Impediments to achieving pregnancy must be excluded or adequately treated before beginning CLOMIPHENE therapy. Those patients most likely to achieve success with clomiphene therapy include patients with polycystic ovary syndrome, amenorrhea-galactorrhea syndrome, psychogenic amenorrhea, certain cases of secondary amenorrhea of undetermined etiology, and post-oral contraceptive amenorrhea. [6]</p> <p>Clomiphene may be used to evaluate a woman's ovulation and egg quality in what is referred to as the Clomiphene Challenge Test. [8,9] When given early in a woman's</p> |

menstrual cycle for 5 days, clomiphene elevates a woman's follicle-stimulating hormone (FSH) level. On the next day, an FSH blood level that has dropped back to normal is a sign of a normal ovarian reserve and ovulation. An elevated FSH is a sign of low ovarian reserve. Women who have a diminished ovarian reserve can use donor eggs, which greatly improves their chances of giving birth to a healthy child.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Attention Deficit Disorder (ADD)</b> FDA approved indication for Attention Deficit Disorder (ADD)                                  |
| <b>Narcolepsy</b> FDA approved indication for narcolepsy                                                                              |
| <b>Off Label Uses: Idiopathic hypersomnolence</b> There is evidence for off label use for idiopathic hypersomnolence.                 |
| <b>Fatigue associated with multiple sclerosis</b> There is evidence for off label use for fatigue associated with multiple sclerosis. |
| <b>Mental fatigue secondary to traumatic brain injury</b> There is evidence for off label use for                                     |

mental fatigue secondary to traumatic brain injury.

**Depression** There is evidence for off label use for depression.

**Weight Loss (Not Covered Benefit)** The potential use of these agents for weight loss is not a covered benefit.

**Drug Name: Vyvanse (lisdexamfetamine)**

**Moderate to Severe Binge Eating Disorder (BED)** Indicated for Moderate to Severe Binge Eating Disorder (BED).

**Attention Deficit Hyperactivity Disorder (ADHD)** Indicated for the treatment of Attention Deficit Hyperactivity Disorder (ADHD) in adults and pediatric patients 6 years and older.

## 2 . Criteria

Product Name:CNS Stimulants (Includes both brand and generic versions of the listed products unless otherwise noted: Products containing amphetamine, dexamethylphenidate, dextroamphetamine, methamphetamine, methylphenidate, serdexmethylphenidate or any combinations of the mentioned products) [a]

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

### Approval Criteria

1 - The patient is less than 18 years of age

**OR**

2 - BOTH of the following:

2.1 The patient is greater than or equal to 18 years of age

**AND**

**2.2** The patient has ONE of the following diagnoses:

- Attention-deficit hyperactivity disorder (ADHD) or attention-deficit disorder (ADD)
- Depression
- Narcolepsy
- Other hypersomnia of central origin
- Autism Spectrum Disorder
- Mental fatigue secondary to traumatic brain injury (e.g. post-concussion syndrome)
- Fatigue associated with medical illness in patients in palliative or end of life care
- Fatigue associated with multiple sclerosis

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Brand Vyvanse, generic lisdexamfetamine [a]

Approval Length 12 month(s)

Guideline Type Prior Authorization

**Approval Criteria**

1 - The patient is less than 18 years of age

**OR**

2 - BOTH of the following:

2.1 The patient is greater than or equal to 18 years of age

**AND**

2.2 ONE of the following:

2.2.1 BOTH of the following:

2.2.1.1 The patient has ONE of the following diagnoses:

- Attention-deficit hyperactivity disorder (ADHD) or attention-deficit disorder (ADD)
- Depression
- Narcolepsy
- Other hypersomnia of central origin
- Autism Spectrum Disorder
- Mental fatigue secondary to traumatic brain injury (e.g. post-concussion syndrome)
- Fatigue associated with medical illness in patients in palliative or end of life care
- Fatigue associated with multiple sclerosis

**AND**

**2.2.1.2** ONE of the following:

**2.2.1.2.1** History of failure, contraindication or intolerance to ONE of the following:

- amphetamine/dextroamphetamine salts extended-release (generic Adderall XR)
- methylphenidate extended-release tablet or capsule (e.g., generic Concerta or Metadate CD)
- dexmethylphenidate ER capsule (generic Focalin XR)

**OR**

**2.2.1.2.2** History of, or potential for, a substance abuse disorder

**OR**

**2.2.2** Diagnosis of Binge Eating Disorder (BED)

### 3 . Background

| Benefit/Coverage/Program Information |
|--------------------------------------|
| Background:                          |

This program will allow coverage for diagnoses supported by FDA labeling and clinical evidence. The CNS stimulants have a variety of FDA approved labeled indications, such as Attention Deficit Hyperactivity Disorder (ADHD), Attention Deficit Disorder (ADD), and narcolepsy. There is evidence for off label use for the stimulants in idiopathic hypersomnolence, fatigue associated with multiple sclerosis, mental fatigue secondary to traumatic brain injury, and depression. The potential use of these agents for weight loss is not a covered benefit. Because of the high abuse potential for this class of medications, their use should be closely monitored in certain age groups. In addition, if the member is less than 18 years of age, the prescription will automatically process without a coverage review.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may also be in place

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

This program is to be administered to members who are new to plan (within the past 120 days) and who have started an oncology or hepatitis C regimen prior to starting with the plan to allow continuation of therapy.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|                                                                                                           |                |
|-----------------------------------------------------------------------------------------------------------|----------------|
| Product Name:Compound Drugs                                                                               |                |
| Approval Length                                                                                           | 12 month(s)    |
| Guideline Type                                                                                            | Administrative |
| <b>Approval Criteria</b><br><br>1 - The compound route of administration is NOT an intravenous injectable |                |

**AND**

**2** - One of the following:

**2.1** Each active ingredient in the compound is/are FDA-approved for the requested indication

**OR**

**2.2** If requested for an off-label indication, the Off-Label guideline approval criteria have been met for the requested indication

**AND**

**3** - If a drug included in the compound requires prior authorization and/or step therapy, all drug specific clinical criteria must also be met

**AND**

**4** - If the drug component is no longer available commercially it must not have been withdrawn for safety reasons

**AND**

**5** - One of the following:

**5.1** A unique vehicle is required

**OR**

**5.2** A unique dosage form is required for a commercially available product due to patient's age, weight, or inability to take a solid dosage form

**OR**

**5.3** A unique formulation is required for a commercially available product due to an allergy or intolerance to an inactive ingredient in the commercially available product

**OR**

**5.4** There is a shortage of the commercially available product per the FDA Drug Shortage database or the ASHP Current Drug Shortages tracking log

**AND**

**6** - Coverage for compounds and bulk powders will NOT be approved for any of the following:

**6.1** For topical compound preparations (e.g., creams, ointments, lotions, or gels to be applied to the skin for transdermal, transcutaneous, or any other topical route), if the requested compound contains any FDA approved ingredient that is not FDA approved for TOPICAL use

**OR**

**6.2** Requested compound contains topical fluticasone. Topical fluticasone will NOT be approved unless:

**6.2.1** Topical fluticasone is intended to treat a dermatologic condition. Scar treatments are considered cosmetic and will not be covered

**AND**

**6.2.2** Patient has a contraindication to all commercially available topically fluticasone formulations

**OR**

**6.3** Requested compound is for cosmetic use or contains any ingredients when used for cosmetic purposes (see Appendix for examples)

**OR**

**6.4** Requested compound does NOT contain any ingredients which are on the FDA's Do Not Compound List  
(<https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?fr=216.24>)

**AND**

**7** - The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (see technician note in Background for the Exclusions and Limitations Grid URL)

**AND**

**8** - One of the following:

**8.1** If the request has one or more ACA/HCR ingredients, ACA/HCR criteria within the ACA/HCR Administrative guideline are met for ALL ingredients\*

**OR**

**8.2** The request does not contain any ACA/HCR ingredients^

Notes

Only ingredients that are available on formulary in one of the formulary tiers, or has a non-formulary status are approvable and should be included in the effectuation. If an approved compound contains an excluded drug such as OTC products, excipients, inactive ingredient that is a BULK chemical, injectable drugs covered under the medical benefit, etc. these ingredients should not be included in the effectuation. If the compound request includes an active ingredient that is a BULK chemical, the request should be denied as benefit exclusion. Injectable products (such as IV antibiotics, infusions, etc.) may be covered under the medical benefit and are excluded from the pharmacy benefit. These should be denied as benefit exclusion.

\*If compound and ACA/HCR criteria are met, approve the compound at \$0 cost share. If only compound criteria are met and not ACA/HCR criteria, deny the request for not meeting ACA/HCR and approve the compound at regular cost share.

^If all compound criteria are met, approve the compound at regular cost share.

## 2 . Background

## Benefit/Coverage/Program Information

### Background:

Compounded drugs that exceed \$50 in cost or contain an ingredient that is commercially available but is never supported by the standard references to be compounded will reject at point of sale as product service not covered. These compounds may be approved if criteria are met.

### Appendix:

Example topical compound preparations (e.g., creams, ointments, lotions or gels to be applied to the skin for transdermal, transcutaneous or any other topical route) that contain any FDA approved ingredient that are not FDA approved for TOPICAL use, including but NOT LIMITED TO the following:

- (1) Ketamine
- (2) Gabapentin
- (3) Flurbiprofen (topical ophthalmic use not included)
- (4) Ketoprofen
- (5) Morphine
- (6) Nabumetone
- (7) Oxycodone
- (8) Cyclobenzaprine
- (9) Baclofen
- (10) Tramadol
- (11) Hydrocodone
- (12) Meloxicam
- (13) Amitriptyline
- (14) Pentoxifylline
- (15) Orphenadrine
- (16) Piroxicam

- (17) Levocetirizine
- (18) Amantadine
- (19) Oxytocin
- (20) Sumatriptan
- (21) Chorionic gonadotropin (human)
- (22) Clomipramine
- (23) Dexamethasone
- (24) Hydromorphone
- (25) Methadone
- (26) Papaverine
- (27) Mefenamic acid
- (28) Promethazine
- (29) Succimer DMSA
- (30) Tizanidine
- (31) Apomorphine
- (32) Carbamazepine
- (33) Ketorolac
- (34) Dimercaptopropane-sulfonate
- (35) Dimercaptosuccinic acid
- (36) Duloxetine
- (37) Fluoxetine
- (38) Bromfenac (topical ophthalmic use not included)
- (39) Nepafenac (topical ophthalmic use not included)

Example compounds that contain ingredients for cosmetic purposes:

- (1) Hydroquinone
- (2) Acetyl hexapeptide-8
- (3) Tocopheryl Acid Succinate

- (4) PracaSil TM-Plus
- (5) Chrysaderm Day Cream
- (6) Chrysaderm Night Cream
- (7) PCCA Spira-Wash
- (8) Lipopen Ultra
- (9) Versapro
- (10) Fluticasone
- (11) Mometasone
- (12) Halobetasol
- (13) Betamethasone
- (14) Clobetasol
- (15) Triamcinolone
- (16) Minoxidil
- (17) Tretinoin
- (18) Dexamethasone
- (19) Spironolactone
- (20) Cycloserine
- (21) Tamoxifen
- (22) Sermorelin
- (23) Mederma Cream
- (24) PCCA Cosmetic HRT Base
- (25) Sanare Scar Therapy Cream
- (26) Scarcin Cream
- (27) Apothederm
- (28) Stera Cream
- (29) Copasil
- (30) Collagenase
- (31) Arbutin Alpha

- (32) Nourisil
- (33) Freedom Cepapro
- (34) Freedom Silomac Andydrous
- (35) Retinaldehyde
- (36) Apothederm

Example ingredients on the FDA's Do Not Compound List:

- (1) 3,3',4',5-tetrachlorosalicylanilide
- (2) Adenosine phosphate
- (3) Adrenal cortex
- (4) Alatrofloxacin mesylate
- (5) Aminopyrine
- (6) Astemizole
- (7) Azaribine
- (8) Benoxaprofen
- (9) Bithionol
- (10) Camphorated oil
- (11) Carbetapentane citrate
- (12) Casein, iodinated
- (13) Cerivastatin sodium
- (14) Chlormadinone acetate
- (15) Chloroform
- (16) Cisapride
- (17) Defenfluramine hydrochloride
- (18) Diamthazole dihydrochloride
- (19) Dibromsalan
- (20) Dihydrostreptomycin sulfate
- (21) Dipyrone

- (22) Encainide hydrochloride
- (23) Etretinate
- (24) Fenfluramine hydrochloride
- (25) Flosequinan
- (26) Glycerol, iodinated
- (27) Grepafloxacin
- (28) Mepazine
- (29) Metabromsalan
- (30) Methapyrilene
- (31) Methopholine
- (32) Methoxyflurane
- (33) Mibefradil dihydrochloride
- (34) Nomifensine maleate
- (35) Novobiocin sodium
- (36) Oxyphenisatin acetate
- (37) Oxyphenisatin
- (38) Pemoline
- (39) Pergolide mesylate
- (40) Phenacetin
- (41) Phenformin hydrochloride
- (42) Phenylpropanolamine
- (43) Pipamazine
- (44) Potassium arsenite
- (45) Propoxyphene
- (46) Rapacuronium bromide
- (47) Rofecoxib
- (48) Sibutramine hydrochloride
- (49) Sparteine sulfate

- (50) Sulfadimethoxine
- (51) Sweet spirits of nitre
- (52) Tegaserod maleate
- (53) Temafloxacin hydrochloride
- (54) Terfenadine
- (55) Ticrynafen
- (56) Tribromsalan
- (57) Trichloroethane
- (58) Troglitazone
- (59) Trovafloxacin mesylate:
- (60) Urethane
- (61) Valdecoxib
- (62) Zomepirac sodium

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Continuous Glucose System</b>                                                                                                                   |
| <b>Diabetes</b> Indicated for use by patients with diabetes who require glucose monitoring beyond what can be achieved with a standard blood glucose monitor. |

## 2 . Criteria

|                                            |                       |
|--------------------------------------------|-----------------------|
| Product Name:Continuous Glucose System [a] |                       |
| Approval Length                            | 12 month(s)           |
| Therapy Stage                              | Initial Authorization |
| Guideline Type                             | Prior Authorization   |

## Approval Criteria

1 - Diagnosis of diabetes

**AND**

2 - ALL of the following:

- Patient is motivated and knowledgeable about use of continuous glucose monitoring
- Patient is adherent to diabetic treatment plan
- Patient participates in ongoing education and support

**AND**

3 - ONE of the following:

**3.1** Patient is on an intensive insulin regimen (3 or more insulin injections per day or uses continuous subcutaneous insulin infusion pump)

**OR**

**3.2** ONE of the following:

- Patient has a history of a level 3 hypoglycemic event [glucose <54mg/dL (3.0mmol/L)] characterized by altered mental and/or physical state requiring third-party assistance for treatment of hypoglycemia
- Patient has a history of more than one level 2 hypoglycemia events [(glucose <54mg/dL (3.0mmol/L)] that persist despite multiple attempts to adjust medication(s) or modify diabetes treatment plan

**AND**

4 - Patient regularly monitors blood glucose 4 or more times per day

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background

Continuous glucose systems may be used by patients with diabetes who require glucose monitoring beyond what can be achieved with a standard blood glucose monitor.

##### Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p>1.1 Worsening heart failure in a diagnosis of stable, symptomatic chronic [e.g. New York Heart Association (NYHA) class II, III or IV] heart failure</p> <p style="text-align: center;"><b>AND</b></p> <p>1.2 Patient has a left ventricular ejection fraction (EF) less than or equal to 35%</p> <p style="text-align: center;"><b>AND</b></p> <p>1.3 The patient is in sinus rhythm</p> <p style="text-align: center;"><b>AND</b></p> <p>1.4 Patient has a resting heart rate greater than or equal to 70 beats per minute</p> <p style="text-align: center;"><b>AND</b></p> <p>1.5 ONE of the following:</p> <ul style="list-style-type: none"> <li>• Patient is on a stabilized dose and receiving concomitant therapy with a maximum tolerated beta blocker (e.g., carvedilol, metoprolol succinate, bisoprolol)</li> <li>• Patient has a contraindication or intolerance to beta-blocker therapy</li> </ul> |                                   |

**AND**

**1.6** ONE of the following:

- Patient is on a stabilized dose and receiving concomitant therapy with Jardiance, Farxiga, or Inpefa (includes combination products containing empagliflozin and dapagliflozin)
- Patient has a contraindication or intolerance to SGLT2 inhibitor therapy

**AND**

**1.7** ONE of the following:

**1.7.1** Patient is on a stabilized dose and receiving concomitant therapy with one of the following:

- angiotensin-converting enzyme (ACE) inhibitor (e.g. captopril, enalapril)
- angiotensin II receptor blocker (ARB) (e.g. candesartan, valsartan)
- angiotensin receptor-neprilysin inhibitor (ARNI) (e.g. Entresto)

**OR**

**1.7.2** Patient has a contraindication or intolerance to ACE inhibitors, ARBs, and ARNIs

**AND**

**1.8** ONE of the following:

- Patient is on a stabilized dose and receiving concomitant therapy with a maximally tolerated aldosterone antagonist (e.g. eplerenone, spironolactone)
- Patient has a contraindication or intolerance to aldosterone antagonist therapy

**AND**

**1.9** Prescribed by or in consultation with a cardiologist

**OR**

**2 - ALL of the following:**

- Diagnosis of stable symptomatic heart failure due to dilated cardiomyopathy (DCM)
- Patient is in sinus rhythm
- Patient has an elevated heart rate
- Prescribed by or in consultation with a cardiologist

**OR**

**3 - ALL of the following:**

**3.1** Diagnosis of inappropriate sinus tachycardia (IST)

**AND**

**3.2** Patient is in sinus rhythm

**AND**

**3.3** ONE of the following:

- Patient has tried and failed or had an inadequate response to a beta blocker (e.g., carvedilol, metoprolol succinate, bisoprolol)
- Patient has a contraindication or intolerance to beta-blocker therapy

**AND**

**3.4** Prescribed by or in consultation with a cardiologist

**OR**

**4 - Patient is currently established on Corlanor therapy**

| <p><b>Background:</b></p> <p>Corlanor (ivabradine) is a hyperpolarization-activated cycle nucleotide-gated channel blocker indicated to reduce the risk of hospitalization for worsening of heart failure in patients with stable, symptomatic chronic heart failure with left ventricular ejection fraction <math>\leq 35\%</math>, who are in sinus rhythm with resting heart rate <math>\geq 70</math> beats per minute and either are on maximally tolerated doses of beta-blockers or have a contraindication to beta-blocker use. It is also indicated to treat stable symptomatic heart failure due to dilated cardiomyopathy (DCM) in pediatric patients aged 6 months and older, who are in sinus rhythm with an elevated heart rate. Also, although not an FDA-approved indication, Corlanor has also shown to have efficacy in treating inappropriate sinus tachycardia (IST).</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> </ul> |

- Supply Limits may be in place.

| <b>Benefit/Coverage/Program Information</b>                                                                                                                                                     |
| <b>Background:</b><br><br>Cotellic (cobimetinib) is a kinase inhibitor indicated for the treatment of patients with unresectable or metastatic melanoma with a BRAF V600E or V600K mutation, in |

combination with Zelboraf (vemurafenib) and as a single agent for the treatment of patients with histiocytic neoplasms. [1]

The National Cancer Comprehensive Network (NCCN) also recommends the use of Cotellic in combination with Zelboraf® (vemurafenib) as treatment for Central Nervous System (CNS) Cancers.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 2 . Background

### Benefit/Coverage/Program Information

#### Background

Opioid (codeine or hydrocodone) containing cough and cold products are FDA labeled for use in adults 18 years of age and older. Use of prescription opioid cough and cold medicines containing codeine or hydrocodone should be limited in children younger than 18 years old due to serious risks associated with use. Coverage for patients age 18 or greater will process automatically.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

**AND**

**5** - Prescribed by an endocrinologist

**AND**

**6** - If the request is for Crenessity oral suspension, ONE of the following:

**6.1** Patient is unable to ingest a solid dosage form (e.g., an oral tablet or capsule) due to ONE of the following:

- Age
- oral-motor difficulties
- dysphagia

**OR**

**6.2** Patient utilizes a feeding tube for medication administration

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name:Crenessity oral capsule and oral suspension [a]

Approval Length 12 month(s)

Therapy Stage Reauthorization

Guideline Type Non Formulary

**Approval Criteria**

**1** - Documentation of positive clinical response to Crenessity therapy (e.g., reduction in total glucocorticoid daily dose, decreased androstenedione levels)

**AND**

**2** - Patient will continue to receive concomitant glucocorticoid replacement (e.g., dexamethasone, hydrocortisone, methylprednisolone, prednisone, prednisolone)

**AND**

**3** - Prescribed by an endocrinologist

**AND**

**4** - If the request is for Crenessity oral suspension, ONE of the following:

**4.1** Patient is unable to ingest a solid dosage form (e.g., an oral tablet or capsule) due to ONE of the following:

- Age
- oral-motor difficulties
- dysphagia

**OR**

**4.2** Patient utilizes a feeding tube for medication administration

**2 - Prescribed by or in consultation with ONE of the following:**

- Endocrinologist
- Geneticist
- Neurologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Ctexli (chenodiol) is a bile acid indicated for treatment of cerebrotendinous xanthomatosis (CTX) in adults.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Guideline Type           | Non Formulary   |

## Approval Criteria

1 - Documentation of positive clinical response to Cuvrior therapy

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Cuvrior (trientine tetrahydrochloride) is a copper chelator indicated for the treatment of adult patients with Wilson's disease who are de-coppered and tolerant to penicillamine.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

## 1 . Indications

|                                                                                                                                                          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Daraprim (pyrimethamine)</b>                                                                                                               |
| <b>Toxoplasmosis</b> Indicated for the treatment of toxoplasmosis when used conjointly with a sulfonamide, since synergism exists with this combination. |

## 2 . Criteria

|                                                         |                     |
|---------------------------------------------------------|---------------------|
| Product Name: Brand Daraprim, generic pyrimethamine [a] |                     |
| Approval Length                                         | 12 months*          |
| Guideline Type                                          | Prior Authorization |

### **Approval Criteria**

**1** - Daraprim will be approved based on submission of medical record (e.g., chart notes) documenting ONE of the following criteria:

**1.1** Treatment of severe acquired toxoplasmosis, including toxoplasmic encephalitis

**OR**

**1.2** Treatment of congenital toxoplasmosis

**OR**

**1.3** Secondary prophylaxis of toxoplasmic encephalitis

**OR**

**1.4** ALL of the following:

**1.4.1** Primary Pneumocystis pneumonia (PCP) prophylaxis in HIV-infected patients or as secondary prophylaxis in HIV-infected patients who have been treated for an acute episode of Pneumocystis pneumonia

**AND**

**1.4.2** Patient has experienced intolerance to prior prophylaxis with trimethoprim-sulfamethoxazole (TMP-SMX)^

**AND**

**1.4.3** ONE of the following:

- Patient has been re-challenged with trimethoprim-sulfamethoxazole (TMP-SMX)^ using a desensitization protocol and is still unable to tolerate

- Evidence of moderately severe or life threatening-reaction to trimethoprim-sulfamethoxazole (TMP-SMX)^ in the past (e.g., toxic epidermal necrolysis (TEN), Stevens-Johnson syndrome)

**OR**

**1.5** ALL of the following:

**1.5.1** Primary prophylaxis of toxoplasmic encephalitis

**AND**

**1.5.2** Toxoplasma IgG positive

**AND**

**1.5.3** CD4 count is less than or equal to 100 cells/mm<sup>3</sup> if initiating prophylaxis or CD4 count is less than 100-200 cells/mm<sup>3</sup> if reinstituting prophylaxis

**AND**

**1.5.4** Will be used in combination with dapsone or atovaquone

**AND**

**1.5.5** Patient has experienced intolerance to prior prophylaxis with trimethoprim-sulfamethoxazole (TMP-SMX)^

**AND**

**1.5.6** ONE of the following:

- Patient has been re-challenged with trimethoprim-sulfamethoxazole (TMP-SMX)^ using a desensitization protocol and is still unable to tolerate

|                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

### Approval Criteria

1 - Documentation of positive clinical response to Daybue therapy

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Daybue is a synthetic analog of the amino-terminal tripeptide of insulin-like growth factor-1 (IGF-1) indicated for the treatment of Rett syndrome (RTT) in adults and pediatric patients aged 2 years and older.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**1** - One of the following reasons that a preferred Test Strip/Glucometer (Accu-Chek, Contour, or OneTouch strip/meter) cannot be used:

- The member has a vision problem/blindness that requires the use of a special glucometer/test strip
- The member is currently on an insulin pump or an insulin delivery device (e.g., OmniPod) that requires a specific glucometer/test strip
- There is a medically necessary justification (e.g., an impairment of manual dexterity) requiring use of a special monitoring system and/or test strip

Notes

NOTE: a) Before approving/denying a product, please check for a previous approval on file for the member for a non-preferred product. If a n approval is on file, an automatic approval is appropriate. b) If a non-preferred test strip/meter is approved for a member, future requests fo r non-preferred test strip/meter products should also be approved.  
NOTE: Continuous Glucose Monitoring (CGM) and components (reader, sensor) should be reviewed using the Continuous Glucose Monitor guideline.

**Product Name:**Test Strips (preferred and non-preferred)

Approval Length

12 month(s)

Guideline Type

Quantity Limit

**Approval Criteria**

**1** - Quantities exceeding the plan's limit of 100 test strips per 30 days are approved for one of the following:

- The patient is insulin dependent or pregnant and the physician confirms the patient requires a greater quantity because of more frequent blood glucose testing (e.g., patients on intravenous insulin infusions)
- The patient is experiencing or is prone to hypoglycemia or hyperglycemia and requires additional testing to achieve glycemic control
- The patient's physician is adjusting medications and the patient requires additional blood glucose testing during this time
- The patient's physician is adjusting MNT (medical nutrition therapy) and the patient requires additional blood glucose testing during this time
- The patient requires additional testing due to fluctuations in blood glucose due to physical activity/exercise
- Other circumstances where prescribing physician confirms that the patient requires a greater quantity because of more frequent blood glucose testing (clinical review required by UnitedHealthcare reviewing pharmacist and/or medical director)

|       |                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | NOTE: Effectuate approvals with quantity limit that corresponds to the approved MDD (max daily dose) for test strips to the requested quantity. |

Product Name: Dojolvi [a]

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|               |                 |
|---------------|-----------------|
| Therapy Stage | Reauthorization |
|---------------|-----------------|

|                |               |
|----------------|---------------|
| Guideline Type | Non Formulary |
|----------------|---------------|

**Approval Criteria**

**1** - Documentation of positive clinical response to Dojolvi therapy (e.g., increased cardiac efficiency, decreased left ventricular wall mass, decreased incidence of rhabdomyolysis, etc.)

**AND**

**2** - Patient is not receiving Dojolvi in combination with any other medium-chain triglyceride (MCT) products

**AND**

**3** - Prescribed by a board certified medical geneticist experienced in the treatment of long-chain fatty acid oxidation disorders (LC-FAOD)

**AND**

**4** - Target recommended daily dosage does not exceed 35% of the patient's total prescribed daily caloric intake (DCI)

**AND**

|                                                                    |                                                                                                                                                                                                                  |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>5 - Patient is receiving disease related dietary management</b> |                                                                                                                                                                                                                  |
| Notes                                                              | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

| Effective Date:    | 11/1/2025                                                     |
| P&T Approval Date: | 8/18/2023                                                     |
| P&T Revision Date: | 03/20/2024 ; 07/17/2024 ; 10/01/2024 ; 07/24/2025 ; 9/25/2025 |

## 1 . Indications

|                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Ceqa (cyclosporine 0.09% ophthalmic solution), Restasis (cyclosporine 0.05% ophthalmic emulsion), Restasis Multidose (cyclosporine 0.05% ophthalmic emulsion)</b>                                          |
| <b>Keratoconjunctivitis sicca</b> Indicated to increase tear production in patients whose tear production is presumed to be suppressed due to ocular inflammation associated with keratoconjunctivitis sicca.            |
| <b>Drug Name: Miebo (perfluorohexyloctane ophthalmic solution), Tryptyr (acoltremon ophthalmic solution), Tyrvaya (varenicline nasal spray), Vevye (cyclosporine 0.1%) , Xiidra (lifitegrast 5% ophthalmic solution)</b> |
| <b>Dry eye disease</b> Indicated for the treatment of the signs and symptoms of dry eye disease.                                                                                                                         |

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                       |

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Cequa™ (cyclosporine 0.09% ophthalmic solution), Restasis® (cyclosporine 0.05% ophthalmic emulsion) and Restasis Multidose (cyclosporine 0.05% ophthalmic emulsion) are indicated to increase tear production in patients whose tear production is presumed to be suppressed due to ocular inflammation associated with keratoconjunctivitis sicca.

Miebo (perfluorohexyloctane ophthalmic solution), Tryptyr (acotremone ophthalmic solution), Tyrvaya (varenicline nasal spray), Vevye (cyclosporine 0.1%) and Xiidra™ (lifitegrast 5% ophthalmic solution) are indicated for the treatment of the signs and symptoms of dry eye disease.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Duopa (carbidopa/levodopa) enteral suspension is indicated for the treatment of motor fluctuations in patients with advanced Parkinson's disease.

Duopa should be administered continuously via an infusion pump over 16 hours through a procedurally-placed tube. Duopa may be administered through a naso-jejunal (NJ) tube for a short period of time until a gastrostomy tube can be placed.<sup>1,2,3</sup>

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderate-to-severe asthma</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 ALL of the following:</p> <p>2.1.1 Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)</li> <li>Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months</li> <li>Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)</li> <li>Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])</li> <li>Patient is currently dependent on oral corticosteroids for the treatment of asthma</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p>2.1.2 Dupixent will be used in combination with ONE of the following:</p> <p>2.1.2.1 ONE maximally dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., fluticasone propionate/salmeterol, Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]</p> |                       |

**OR**

**2.1.2.2** Combination therapy including BOTH of the following:

- ONE maximally dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]
- ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or salmeterol (Serevent); leukotriene receptor antagonist – montelukast (Singulair); theophylline]

**AND**

**2.1.3** ONE of the following:

- Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting that asthma is an eosinophilic phenotype as defined by a baseline (pre-dupilumab treatment) peripheral blood eosinophil level greater than or equal to 150 cells/uL (microliter)
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

**OR**

**2.2** BOTH of the following:

- Patient is currently on Dupixent therapy
- Patient has not received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Sanofi and Regeneron Pharmaceuticals sponsored Dupixent MyWay program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Dupixent\*

**AND**

**3** - Patient is not receiving Dupixent in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]

## **Approval Criteria**

**1 - ONE of the following:**

**1.1** Diagnosis of chronic rhinosinusitis with nasal polyposis (CRSwNP) defined by ALL of the following:

**1.1.1** TWO OR MORE of the following symptoms for longer than 12 weeks duration:

- Nasal mucopurulent discharge
- Nasal obstruction, blockage, or congestion
- Facial pain, pressure, and/or fullness
- Reduction or loss of sense of smell

**AND**

**1.1.2** ONE of the following findings using nasal endoscopy and/or sinus computed tomography (CT):

- Purulent mucus or edema in the middle meatus or ethmoid regions
- Polyps in the nasal cavity or the middle meatus
- Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

**AND**

**1.1.3** ONE of the following:

- Presence of bilateral nasal polyposis
- Patient has previously required surgical removal of bilateral nasal polyps

**AND**

**1.1.4** ONE of the following:

**1.1.4.1** Patient has required prior sinus surgery

**OR**

**1.1.4.2** Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for CRSwNP in the previous 2 years

**OR**

**1.1.4.3** Patient has been unable to obtain symptom relief after trial of TWO of the following classes of agents:

- Nasal saline irrigations
- Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)
- Antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)

**OR**

**1.2** ALL of the following:

- Diagnosis of chronic rhinosinusitis with nasal polypsis (CRSwNP)
- Patient is currently on Dupixent therapy
- Patient has not received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Sanofi and Regeneron Pharmaceuticals sponsored Dupixent MyWay program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Dupixent\*

**AND**

**2** - Patient will receive Dupixent as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

**AND**

**3** - Patient is NOT receiving Dupixent in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

|                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of eosinophilic esophagitis</b></p> <p><b>AND</b></p> <p><b>2 - Patient is experiencing symptoms related to esophageal dysfunction (e.g., dysphagia, food impaction, chest pain that is often centrally located and may not respond to antacids, gastroesophageal reflux disease-like symptoms/refractory heartburn, upper abdominal pain)</b></p> |                          |

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting eosinophil-predominant inflammation on esophageal biopsy, consisting of a peak value of greater than or equal to 15 intraepithelial eosinophils per high power field (HPF) (or 60 eosinophils per mm<sup>2</sup>)

**AND**

**4** - Secondary causes of esophageal eosinophilia have been ruled out

**AND**

**5** - Mucosal eosinophilia is isolated to the esophagus and symptoms have persisted after an 8-week trial of at least ONE of the following:

- Proton pump inhibitors (e.g., pantoprazole, omeprazole)
- Topical (esophageal) corticosteroids (e.g., budesonide, fluticasone)

**AND**

**6** - Patient is not receiving Dupixent in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by ONE of the following:

- Allergist
- Gastroenterologist

**3.2** COPD exacerbation(s) occurred while receiving maintenance therapy with ONE of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)

**AND**

**4** - Symptoms of chronic productive cough for at least 3 months in the past year

**AND**

**5** - Dupixent will be used as add-on maintenance therapy with ONE of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)

**AND**

**6** - Patient is not receiving Dupixent in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by ONE of the following:

- Allergist

**3** - Patient is not receiving Dupixent in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

Product Name: Dupixent [a]

Diagnosis Chronic Spontaneous Urticaria

Approval Length 12 month(s)

Therapy Stage Initial Authorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - Diagnosis of chronic spontaneous urticaria

**AND**

**2** - ONE of the following:

**2.1** Patient remains symptomatic despite at least a 2-week trial of, or history of

contraindication or intolerance to, TWO H1-antihistamines [e.g., Allegra (fexofenadine), Benadryl (diphenhydramine), Claritin (loratadine)]^

**OR**

**2.2** Patient remains symptomatic despite at least a 2-week trial of, or history of contraindication or intolerance to BOTH of the following taken in combination^:

**2.2.1** A second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

**AND**

**2.2.2** ONE of the following:

- A different second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]
- A first generation H1-antihistamine [e.g., Benadryl (diphenhydramine), Chlor-Trimeton (chlorpheniramine), Vistaril (hydroxyzine)]
- An H2-antihistamine [e.g., Pepcid (famotidine), Tagamet HB (cimetidine), Zantac (ranitidine)]
- A leukotriene modifier [e.g., Singulair (montelukast)]

**AND**

**3** - Patient is not receiving Dupixent in combination with Xolair (omalizumab) for treatment of the same indication

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Allergist
- Dermatologist
- Immunologist

**Benefit/Coverage/Program Information**

**Background:**

Dupixent® (dupilumab) is an interleukin-4 receptor alpha antagonist indicated for treatment of patients aged 6 months and older with moderate-to-severe atopic dermatitis whose disease is not adequately controlled with topical prescription therapies or when those therapies are not advisable. Dupixent can be used with or without topical corticosteroids. Dupixent is also indicated as an add-on maintenance treatment in patients with moderate-to-severe asthma aged 6 years and older with an eosinophilic phenotype or with oral corticosteroid dependent asthma, as an add-on maintenance treatment in adult and pediatric patients aged 12 years and older with inadequately controlled chronic rhinosinusitis with nasal polyposis (CRSwNP), for the treatment of adult and pediatric patients aged 1 year and older, weighing at least 15 kg, with eosinophilic esophagitis (EoE), and for adult patients with prurigo nodularis (PN), as add-on maintenance treatment of adult patients with inadequately controlled chronic obstructive pulmonary disease (COPD) and an eosinophilic phenotype, for the treatment of adult and pediatric patients aged 12 years and older with chronic spontaneous urticaria (CSU) who remain symptomatic despite H1 antihistamine treatment, and for the treatment of adult patients with bullous pemphigoid.

*Limitation of Use:*

Dupixent is not for the relief of acute bronchospasm or status asthmaticus and is not indicated for other forms of urticaria.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

**OR**

**3.2** Patient is currently on Ebglyss therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

**AND**

**4** - Ebglyss will be used in combination with a topical corticosteroid and/or topical calcineurin inhibitor

**AND**

**5** - Patient is NOT receiving Ebglyss in combination with either of the following:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupxient (dupilumab)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

**6** - Prescribed by, or in consultation with, ONE of the following:

- Dermatologist
- Allergist
- Immunologist

## Approval Criteria

1 - Documentation of positive clinical response to Ebglyss therapy

**AND**

2 - Patient is NOT receiving Ebglyss in combination with either of the following:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupxient (dupilumab)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

3 - Prescribed by, or in consultation with, ONE of the following:

- Dermatologist
- Allergist
- Immunologist

## 1 . Indications

|                                                                                                      |
|------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Egaten (triclabendazole)</b>                                                           |
| <b>Fascioliasis</b> Indicated for the treatment of fascioliasis in patients over the age of 6 years. |

## 2 . Criteria

|                                 |                     |
|---------------------------------|---------------------|
| <b>Product Name:</b> Egaten [a] |                     |
| <b>Approval Length</b>          | 1 month(s)          |
| <b>Guideline Type</b>           | Prior Authorization |

## Approval Criteria

### 1 - Diagnosis of fascioliasis

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

#### Background

Egaten (triclabendazole) is an anthelmintic, indicated in the treatment of fascioliasis in patients over the age of 6 years.

### **Background**

Egrifta SV (tesamorelin) is a growth hormone releasing factor (GHRF) analog indicated for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy.

#### Limitations of Use:

- Long-term cardiovascular safety of Egrifta SV has not been established.
- Not indicated for weight loss management.
- There are no data to support improved compliance with anti-retroviral therapies in HIV-positive patients taking Egrifta SV.

### 3 . Background

### Benefit/Coverage/Program Information

**Background:** Ekterly® (sebetralstat) is a plasma kallikrein inhibitor indicated for the treatment of acute attacks of hereditary angioedema (HAE) in adult and pediatric patients aged 12 years and older.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### Approval Criteria

1 - Published clinical evidence shows Emflaza is likely to produce equivalent therapeutic results as other available corticosteroids (e.g., prednisone); therefore, Emflaza is NOT MEDICALLY NECESSARY for treatment of Duchenne muscular dystrophy

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background

Emflaza (deflazacort) is a corticosteroid indicated for the treatment of Duchenne muscular dystrophy (DMD) in patients 2 years of age and older. [1]

In a report from the Guideline Development Subcommittee of the American Academy of Neurology, regarding selection of prednisone versus deflazacort in the treatment of DMD, the following statement is made: “prednisone and deflazacort are possibly equally effective for improving motor function in patients with DMD. [3] Three Class III studies directly compared prednisone and deflazacort. In one study, deflazacort and prednisone were shown to have equally beneficial effects on functional motor outcomes, pulmonary function, and development of scoliosis over 5.49 years (SD 1.98). [4] In another study, prednisone and deflazacort were equally effective in improving motor function and functional performance over a 12- month treatment period. [5] A final study reported equivalent cardiac outcome in deflazacort- and prednisone-treated groups over a mean follow-up period of 3.0 years (SD 2.5). [6]

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Empaveli (pegcetacoplan) is a complement inhibitor indicated for the treatment of adult patients with paroxysmal nocturnal hemoglobinuria (PNH).

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Entresto (valsartan-sacubitril), Entresto sprinkles (valsartan-sacubitril)</b>                                                                                                                                                                                                                                                                                                       |
| <b>Heart Failure</b> Indicated to reduce the risk of cardiovascular death and hospitalization for heart failure. Benefits are most clearly evident in patients with left ventricular ejection fraction (LVEF) below normal. It is also indicated for the treatment of symptomatic heart failure with systemic left ventricular systolic dysfunction in pediatric patients aged one year and older. |

## 2 . Criteria

|                                                                |             |
|----------------------------------------------------------------|-------------|
| Product Name: Brand Entresto, generic sacubitril/valsartan [a] |             |
| Approval Length                                                | 12 month(s) |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                       |

## 3 . Background

### Benefit/Coverage/Program Information

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may be in place.

#### Background:

Entresto (valsartan-sacubitril) is indicated to reduce the risk of cardiovascular death and hospitalization for heart failure. Benefits are most clearly evident in patients with left ventricular ejection fraction (LVEF) below normal. It is also indicated for the treatment of symptomatic heart failure with systemic left ventricular systolic dysfunction in pediatric patients aged one year and older.

| <p><b>Background:</b></p> <p>Erleada (apalutamide) is an androgen receptor inhibitor indicated for the treatment of patients with non-metastatic castration-resistant prostate cancer. It is also indicated for the treatment of metastatic castration-sensitive prostate cancer. Patients should also receive a gonadotropin-releasing hormone (GnRH) analog concurrently while taking Erleada or should have had bilateral orchiectomy. [1]</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>Supply limits may be in place.</li> </ul> |

| <p><b>Approval Criteria</b></p> |                                                                          |

**1 - Diagnosis of chronic fibrosing interstitial lung disease (ILD) with a progressive phenotype as documented by BOTH of the following criteria:**

**1.1** Presence of fibrotic ILD as determined by finding evidence of pulmonary fibrosis on HRCT, involving at least 10% of the lungs

**AND**

**1.2** Patient is presenting with clinical signs of progression as defined by ONE of the following in the previous 24 months:

**1.2.1** Forced vital capacity (FVC) decline of greater than 10%

**OR**

**1.2.2** TWO of the following:

- FVC decline of greater than or equal to 5%, but less than 10%
- Patient is experiencing worsening respiratory symptoms
- Patient is exhibiting increasing extent of fibrotic changes on chest imaging

**AND**

**2 - Ofev is not being used in combination with Esbriet or pirfenidone**

**AND**

**3 - The prescriber is a pulmonologist**

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Non Formulary |
| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of spinal muscular atrophy (SMA)</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Submission of medical records (e.g., chart notes, laboratory values) confirming the mutation or deletion of genes in chromosome 5q resulting in ONE of the following:</b></p> <ul style="list-style-type: none"><li>• Homozygous gene deletion or mutation of SMN1 gene (e.g., homozygous deletion of exon 7 at locus 5q13)</li><li>• Compound heterozygous mutation of SMN1 gene (e.g., deletion of SMN1 exon 7 [allele 1] and mutation of SMN1 [allele 2])</li></ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3 - Patient is not dependent on either of the following:</b></p> <ul style="list-style-type: none"><li>• Invasive ventilation</li><li>• Use of non-invasive ventilation beyond use for naps and nighttime sleep</li></ul> <p style="text-align: center;"><b>AND</b></p> <p><b>4 - Patient is not receiving concomitant chronic survival motor neuron (SMN) modifying therapy [e.g., Spinraza (nusinersen)]</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>5 - ONE of the following:</b></p> <p><b>5.1 Patient has not previously received gene replacement therapy for the treatment of SMA [e.g., Zolgensma (onasemnogene abeparvovec-xioi)]</b></p> <p style="text-align: center;"><b>OR</b></p> |               |

**5.2 BOTH of the following:**

**5.2.1** Patient has previously received gene replacement therapy [e.g., Zolgensma (onasemnogene abeparvovec-xioi)] for the treatment of SMA

**AND**

**5.2.2** Submission of medical records (e.g., chart notes, laboratory values) documenting a clinically meaningful functional decline (e.g., loss of motor milestone) since receiving gene replacement therapy [e.g., Zolgensma (onasemnogene abeparvovec-xioi)]

**AND**

**6 -** Submission of medical records (e.g., chart notes, laboratory values) documenting the baseline assessment of at least ONE of the following exams (based on patient age and motor ability) to establish baseline motor ability (baseline motor function analysis could include assessments evaluated prior to receipt of previous chronic SMN modifying therapy if transitioning therapy)\*:

- Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP INTEND)
- Hammersmith Infant Neurological Exam Part 2 (HINE-2)
- Hammersmith Functional Motor Scale Expanded (HF MSE)
- Revised Upper Limb Module (RULM) Test
- Motor Function Measure 32 (MFM-32) Scale

**AND**

**7 -** Prescribed by or in consultation with a neurologist with expertise in the treatment of SMA

| Notes | <p>* Baseline assessments for patients less than 2 months of age requesting Evrysdi are not necessary in order to not delay access to initial therapy in recently diagnosed infants. Initial assessments shortly post-therapy can serve as baseline with respect to efficacy reauthorization assessment.</p> <p>[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.</p> |

| <p><b>Approval Criteria</b></p> <p>1 - Submission of medical records (e.g., chart notes, laboratory values) with the most recent results documenting a positive clinical response to Evrysdi compared to pretreatment baseline status (inclusive of baseline assessments prior to receipt of previous chronic SMN modifying therapy) as demonstrated by at least one of the following exams:</p> <p><b>1.1 CHOP INTEND: ONE of the following:</b></p> <ul style="list-style-type: none"> <li>Improvement or maintenance of previous improvement of at least a 4 point increase in score from pretreatment baseline</li> <li>Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2 HINE-2: ONE of the following:</b></p> <ul style="list-style-type: none"> <li>Improvement or maintenance of previous improvement of at least 2 point (or maximal score) increase in ability to kick</li> <li>Improvement or maintenance of previous improvement of at least 1 point increase in any other HINE-2 milestone (e.g., head control, rolling, sitting, crawling, etc.), excluding voluntary grasp</li> <li>The patient exhibited improvement, or maintenance of previous improvement in more HINE motor milestones than worsening, from pretreatment baseline (net positive improvement)</li> <li>Patient has achieved and maintained any new motor milestones when they would otherwise be unexpected to do so</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p><b>1.3 HFMSE: ONE of the following</b></p> <ul style="list-style-type: none"> <li>Improvement or maintenance of previous improvement of at least a 3 point increase in score from pretreatment baseline</li> </ul> |                 |

- Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so

**OR**

**1.4 RULM: ONE of the following:**

- Improvement or maintenance of previous improvement of at least a 2 point increase in score from pretreatment baseline
- Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so

**OR**

**1.5 MFM-32: ONE of the following:**

- Improvement or maintenance of previous improvement of at least a 3 point increase in score from pretreatment baseline
- Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so

**AND**

**2 - Patient is not dependent on either of the following:**

- Invasive ventilation
- Use of non-invasive ventilation beyond use for naps and nighttime sleep

**AND**

**3 - Patient is not receiving concomitant chronic survival motor neuron (SMN) modifying therapy [e.g., Spinraza (nusinersen)]**

**AND**

**4 - Prescribed by or in consultation with a neurologist with expertise in the treatment of SMA**

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of primary immunoglobulin A nephropathy (IgAN) confirmed by renal biopsy</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Patient is at risk of rapid disease progression [e.g., generally a urine protein-to-creatinine ratio (UPCR) greater than or equal to 1.5 g/g, or by other criteria such as clinical risk scoring using the International IgAN Prediction Tool]</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - Used to reduce proteinuria</p> <p style="text-align: center;"><b>AND</b></p> <p><b>4</b> - Estimated glomerular filtration rate (eGFR) is greater than or equal to 30 mL/min/1.73 m<sup>2</sup></p> <p style="text-align: center;"><b>AND</b></p> <p><b>5</b> - ONE of the following:</p> <p><b>5.1</b> Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following:</p> <ul style="list-style-type: none"> <li>Maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)</li> <li>Maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p><b>5.2</b> Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs</p> |                       |

**AND**

**6 - ONE of the following:**

- Patient is on a stabilized dose and receiving concomitant therapy with a maximally tolerated sodium-glucose cotransporter-2 (SGLT2) inhibitor [e.g., Jardiance (empagliflozin)]
- Patient has an allergy, contraindication, or intolerance to SGLT2 inhibitors

**AND**

**7 - History of failure, contraindication or intolerance to a 30-day trial of a glucocorticoid (e.g., methylprednisolone, prednisone)**

**AND**

**8 - Prescribed by or in consultation with a nephrologist**

**AND**

**2** - Disease is considered to be moderate to severe based on proteinuria  $\geq 1.5$  g/day and/or abnormal kidney function

**AND**

**3** - Used to reduce proteinuria

**AND**

**4** - History of failure, contraindication or intolerance to a glucocorticoid (e.g., methylprednisolone, prednisone)

**AND**

**5** - ONE of the following:

**5.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following:

- Maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- Maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)

**OR**

**5.2** Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs

**AND**

**6** - Patient has not undergone a solid-organ or cell transplant, including kidney transplant

**AND**

**7 - Prescribed by or in consultation with a nephrologist**

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Background:</b><br><br>Fabhalta (iptacopan) is a complement factor B inhibitor, indicated for the treatment of adults with paroxysmal nocturnal hemoglobinuria (PNH) the reduction of proteinuria in adults with primary immunoglobulin A nephropathy (IgAN) at risk of rapid disease progression, generally a urine protein-to-creatinine ratio (UPCR) $\geq 1.5$ g/g; and for the treatment of adults with complement 3 glomerulopathy (C3G), to reduce proteinuria. [1] |

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

| Product Name:Fasenra (benralizumab) [a]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                       |
| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Severe Asthma         |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 12 month(s)           |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Initial Authorization |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Non Formulary         |
| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p>1.1 Patient has been established on therapy with Fasenra under an active UnitedHealthcare medical benefit prior authorization for the treatment of severe asthma</p> <p style="text-align: center;"><b>AND</b></p> <p>1.2 Documentation of positive clinical response to Fasenra therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"><li>• Reduction in the frequency of exacerbations</li><li>• Decreased utilization of rescue medications</li><li>• Increase in percent predicted FEV1 from pretreatment baseline</li><li>• Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)</li><li>• Reduction in oral corticosteroid requirements</li></ul> <p style="text-align: center;"><b>AND</b></p> <p>1.3 Fasenra is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]</p> <p style="text-align: center;"><b>AND</b></p> |                       |

**1.4** Patient is not receiving Fasenra in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**1.5** Prescribed by ONE of the following:

- Pulmonologist
- Allergist
- Immunologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of severe asthma

**AND**

**2.2** Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:

- Poor symptom control ((e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**2.3** Submission of medical records (e.g., chart notes, laboratory values, etc.) confirming asthma is an eosinophilic phenotype as defined by a baseline (pre-treatment) peripheral blood eosinophil level  $\geq 150$  cells/ $\mu$ L

**AND**

**2.4** Fasenra will be used in combination with ONE of the following:

**2.4.1** ONE maximally dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**OR**

**2.4.2** Combination therapy including BOTH of the following:

- ONE maximally dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]
- ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist – montelukast (Singulair); theophylline]

**AND**

**2.5** Patient is not receiving Fasenra in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.6** Prescribed by ONE of the following:

- Pulmonologist
- Allergist

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Non Formulary                                        |
| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p>1.1 Patient has been established on therapy with Fasenra under an active UnitedHealthcare medical benefit prior authorization for the treatment of EGPA</p> <p style="text-align: center;"><b>AND</b></p> <p>1.2 Documentation of positive clinical response to Fasenra therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Reduction in the frequency and/or severity of relapses</li> <li>• Reduction or discontinuation of doses of corticosteroids and/or immunosuppressant</li> <li>• Disease remission</li> <li>• Reduction in severity or frequency of EGPA-related symptoms</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p>1.3 Patient is not receiving Fasenra in combination with ANY of the following for treatment of the same indication:</p> <ul style="list-style-type: none"> <li>• Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]</li> </ul> |                                                      |

- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**1.4 Prescribed by ONE of the following:**

- Pulmonologist
- Rheumatologist
- Allergist
- Immunologist

**OR**

**2 - ALL of the following:**

**2.1 Diagnosis of relapsing or refractory EGPA as defined by ALL of the following:**

**2.1.1 Diagnosis of EGPA**

**AND**

**2.1.2 Past medical history or presence of asthma**

**AND**

**2.1.3 Presence of at least TWO of the following characteristics typical of EGPA:**

- Histopathological evidence of: Eosinophilic vasculitis, Perivascular eosinophilic infiltration, Eosinophil-rich granulomatous inflammation
- Neuropathy, mono or poly (motor deficit or nerve conduction abnormality)
- Pulmonary infiltrates, non-fixed
- Sino-nasal abnormality
- Cardiomyopathy (established by echocardiography or MRI)
- Glomerulonephritis (hematuria, red cell casts, proteinuria)
- Alveolar hemorrhage
- Palpable purpura
- Anti-neutrophil cytoplasmic antibody (ANCA) positive

**AND**

**2.2** History of relapsing or refractory disease defined as ONE of the following:

- Relapsing disease as defined as a past history (within the past 2 years) of at least one EGPA relapse (requiring additional or dose escalation of corticosteroids or immunosuppressant, or hospitalization)
- Refractory disease as defined as failure to attain remission within the prior 6 months following induction treatment with standard therapy regimens

**AND**

**2.3** Patient is currently taking standard therapy [i.e., systemic glucocorticoids (e.g., prednisone, methylprednisolone) with or without immunosuppressive therapy (e.g., cyclophosphamide, rituximab)]

**AND**

**2.4** Patient is not receiving Fasenra in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.5** Prescribed by ONE of the following:

- Pulmonologist
- Rheumatologist
- Allergist
- Immunologist
