| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p><b>1.1</b> Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of COPD</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Documentation of positive clinical response to Nucala therapy</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3</b> Patient will continue to receive Nucala as add-on maintenance therapy</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.4</b> Patient is not receiving Nucala in combination with ANY of the following for treatment of the same indication:</p> |                                              |

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

**OR**

**2 - ALL of the following:**

**2.1 Diagnosis of COPD**

**AND**

**2.2 Submission of medical records (e.g., chart notes) documenting ALL of the following:**

- Post-bronchodilator forced expiratory volume (FEV1) / forced vital capacity (FVC) ratio less than 0.7
- Post-bronchodilator FEV1 % predicted greater than or equal to 30% and less than or equal to 70%
- Patient has an eosinophilic phenotype defined by a baseline (pre-mepolizumab treatment) peripheral blood eosinophil level  $\geq 300$  cells/ $\mu$ L

**AND**

**2.3 Uncontrolled or inadequately controlled COPD demonstrated by BOTH of the following:**

**2.3.1 ONE of the following:**

- Two or more COPD exacerbations in the previous year requiring treatment with systemic corticosteroids and/or antibiotics
- One or more COPD exacerbation(s) that resulted in hospitalization or observation for over 24 hours in an emergency department or urgent care facility in the past year

**AND**

**2.3.2 COPD exacerbation(s) occurred while receiving maintenance therapy with ONE of the following:**

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)

**AND**

**2.4** Symptoms of chronic productive cough for at least 3 months in the past year

**AND**

**2.5** Nucala will be used as add-on maintenance therapy in combination with ONE of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)

**AND**

**2.6** Patient is not receiving Nucala in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin-4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.7** Prescribed by ONE of the following:

- Allergist
- Immunologist

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Non Formulary                                |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Documentation of a positive clinical response to Nucala therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>Reduction in the frequency of COPD exacerbations</li> <li>Increase in percent predicted FEV1 from pretreatment baseline</li> <li>Reduction in severity or frequency of COPD-related symptoms (e.g., dyspnea, wheezing, cough, sputum volume, decrease in sputum purulence)</li> <li>Reduction in oral corticosteroid requirements</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Nucala is being used as add-on maintenance therapy in combination with ONE of the following:</p> <ul style="list-style-type: none"> <li>Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)</li> <li>Dual therapy with a long-acting muscarinic antagonist (LAMA) and long-acting beta agonist (LABA) (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)</li> </ul> <p style="text-align: center;"><b>AND</b></p> |                                              |

**3** - Patient is not receiving Nucala in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin-4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Nucala (mepolizumab) is an interleukin-5 receptor antagonist indicated for add-on maintenance treatment of patients aged 6 years and older with severe asthma and with an eosinophilic phenotype, for add-on maintenance treatment of adult patients 18 years and older with chronic rhinosinusitis with nasal polyps (CRSwNP), the treatment of adult patients with eosinophilic granulomatosis with polyangiitis (EGPA), for add-on maintenance treatment of adult patients with inadequately controlled chronic obstructive pulmonary disease (COPD) and an eosinophilic phenotype, and the treatment of adult and pediatric patients aged 12 years and older with hypereosinophilic syndrome (HES) for ≥6 months without an identifiable non-hematologic secondary cause[1].

Limitations of use:

Nucala is not for relief of acute bronchospasm of status asthmaticus.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.
- The single-dose vial is typically covered under the medical benefit. Please refer to the United Healthcare Medical Benefit Drug Policy: “Respiratory Interleukins (Cinqair®, Fasentra®, and Nucala®)”.

## Approval Criteria

### 1 - Documentation of positive clinical response to therapy

|       |                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Nuedexta, a combination product containing dextromethorphan hydrobromide and quinidine sulfate, is indicated for the treatment of pseudobulbar affect (PBA). PBA occurs secondary to a variety of neurologic conditions, and is characterized by involuntary, sudden, and frequent episodes of laughing and/or crying. PBA episodes typically occur out of proportion or are inappropriate to the underlying emotional state. PBA is a specific condition, distinct from other types of emotional lability that may occur in patients with neurological disease or injury.

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

**OR**

**3.2** Patient has less than 4 migraine days per month

**OR**

**3.3** Patient has greater than or equal to 4 migraine days per month and has contraindication or intolerance to ONE of the following prophylactic therapies:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig (erenumab), Ajovy (fremanezumab), Emgality (galcanezumab), Qulipta, Vyepti (eptinezumab-jjmr)]
- Divalproex sodium (Depakote/Depakote ER)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- OnabotulinumtoxinA (Botox) [Note: Coverage of onabotulinumtoxinA (Botox) may be subject to additional benefit and coverage review requirements]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**4** - Medication will not be used in combination with another acute calcitonin gene-related peptide receptor (CGRP) antagonist (e.g., Nurtec ODT, Zavzpret)

|       |                                                                                                                                                                                                                  |

| Guideline Type            | Prior Authorization   |
| Approval Criteria         |                       |

**1 - Used for acute treatment of migraine**

**AND**

**2 - History of therapeutic failure (after at least 3 migraine episodes and a minimum of a 30-day trial), contraindication or intolerance to BOTH of the following (document name and date tried):**

- TWO formulary 5-HT<sub>1</sub> receptor agonist (triptan) alternatives (e.g., sumatriptan, rizatriptan, or naratriptan with step therapy), one of which must be sumatriptan nasal spray
- Ubrelvy

**AND**

**3 - ONE of the following:**

**3.1 Patient is currently treated with one of the following prophylactic therapies:**

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig (erenumab), Ajovy (fremanezumab), Emgality (galcanezumab), Qulipta, Vyepti (eptinezumab-jjmr)]
- Divalproex sodium (Depakote/Depakote ER)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- OnabotulinumtoxinA (Botox) [Note: Coverage of onabotulinumtoxinA (Botox) may be subject to additional benefit and coverage review requirements]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**3.2 Patient has less than 4 migraine days per month**

**OR**

**3.3 Patient has greater than or equal to 4 migraine days per month and has contraindication or intolerance to ONE of the following prophylactic therapies:**

- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig (erenumab), Ajovy (fremanezumab), Emgality (galcanezumab), Qulipta, Vyepti (eptinezumab-jjmr)]
- Divalproex sodium (Depakote/Depakote ER)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- OnabotulinumtoxinA (Botox) [Note: Coverage of onabotulinumtoxinA (Botox) may be subject to additional benefit and coverage review requirements]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**1.4.2** Patient has less than 4 migraine days per month

**OR**

**1.4.3** Patient has greater than or equal to 4 migraine days per month and has contraindication or intolerance to one of the following prophylactic therapies:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig (erenumab), Ajovy (fremanezumab), Emgality (galcanezumab), Qulipta, Vyepti (eptinezumab-jjmr)]
- Divalproex sodium (Depakote/Depakote ER)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- OnabotulinumtoxinA (Botox) [Note: Coverage of onabotulinumtoxinA (Botox) may be subject to additional benefit and coverage review requirements]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**1.5** Medication will not be used in combination with another acute calcitonin gene-related peptide receptor (CGRP) antagonists (e.g., Ubrelvy, Zavzpret)

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of episodic migraines with greater than or equal to 4 migraine days per month

**AND**

**2.2** Used for preventive treatment of migraines

**AND**

**2.3** Failure (after a trial of at least three months), contraindication or intolerance to Aimovig (document name and date tried)

**AND**

**2.4** History of failure (after a trial of at least two months), contraindication or intolerance to TWO of the following prophylactic therapies (document name and date tried):

- One of the following beta-blockers: atenolol, metoprolol, nadolol, propranolol, or timolol
- Divalproex sodium (Depakote/Depakote ER)
- Topiramate (Topamax)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**2.5** Medication will not be used in combination with another CGRP antagonist or inhibitor used for the preventive treatment of migraines (e.g., Aimovig, Ajovy, Emgality, Qulipta, Vyepti)

**1** - Diagnosis of migraine consistent with The International Classification of Headache Disorders, 3rd edition

**AND**

**2** - ONE of the following:

**2.1** 4 to 7 migraine days per month and at least ONE of the following:

- Less than 15 headache days per month
- Provider attests this is the member's predominant headache diagnosis (i.e., primary driver of headaches is not a different, non-migrainous condition)

**OR**

**2.2** Greater than or equal to 8 migraine days per month

**AND**

**3** - Failure (after a trial of at least two months), contraindication or intolerance to TWO of the following prophylactic therapies (document name and date tried):

- One of the following beta-blockers: atenolol, metoprolol, nadolol, propranolol, or timolol
- Divalproex sodium (Depakote/Depakote ER)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- OnabotulinumtoxinA (Botox) [Note: Coverage of onabotulinumtoxinA (Botox) may be subject to additional benefit and coverage review requirements]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**4** - Failure (after a trial of at least three months), contraindication or intolerance to Aimovig (document name and date tried)

**AND**

| <p><b>Background:</b></p> <p>Nurtec ODT (rimegepant), Ubrelvy (ubrogepant) and Zavzpret (zavegepant) are calcitonin gene-related peptide receptor antagonists indicated for the acute treatment of migraine with or without aura in adults. Nurtec ODT is also indicated for the preventive treatment of</p> |

episodic migraine in adults and Qulipta (atogepant) is indicated for the preventive treatment of migraine in adults.

The American Headache Society recommends the use of NSAIDs (including aspirin), non-opioid analgesics, acetaminophen, or caffeinated analgesic combinations (e.g., aspirin/acetaminophen/caffeine) for mild-to-moderate attacks and migraine-specific agents (i.e., triptans, dihydroergotamine [DHE]) for moderate or severe attacks and mild-to-moderate attacks that respond poorly to NSAIDs or caffeinated combinations.

Preventive treatment selection is based on evidence of efficacy, tolerability, patient preference, headache subtype, and comorbidities. The American Academy of Neurology guidelines note that antiepileptic drugs (divalproex sodium, valproate sodium, topiramate) and beta-blockers (metoprolol, propranolol, timolol) have established efficacy and that antidepressants (amitriptyline, venlafaxine) and beta-blockers (atenolol, nadolol) are probably effective for the preventive treatment of migraine headache.

This program requires a member to try lower cost options prior to receiving coverage for Nurtec ODT, Qulipta, Ubrelvy or Zavzpret.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Modafinil (Provigil) and armodafinil (Nuvigil) are wakefulness-promoting agents for oral administration. Both products are approved by the Food and Drug Administration (FDA) to improve wakefulness in patients with excessive sleepiness associated with narcolepsy, obstructive sleep apnea and shift work disorder. Modafinil has been shown to be beneficial in the treatment of excessive sleepiness in patients with idiopathic hypersomnia, treatment of</p> |

fatigue associated with multiple sclerosis, and in the augmentation therapy for the treatment of depression.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Ocaliva (obeticholic acid), a farnesoid X receptor (FXR) agonist, is indicated for the treatment of primary biliary cholangitis (PBC), without cirrhosis or with compensated cirrhosis without evidence of portal hypertension, in combination with ursodeoxycholic acid (UDCA) in adults with an inadequate response to UDCA, or as monotherapy in adults unable to tolerate UDCA. This indication is approved under accelerated approval based on a reduction in alkaline phosphatase (ALP). An improvement in survival or disease-related symptoms has not been established. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trials. [1]</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>• Supply limits may be in place.</li> </ul> |

| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of chronic obstructive pulmonary disease</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Submission of medical records (e.g., chart notes) documenting BOTH of the following:</b></p> <ul style="list-style-type: none"> <li>• Post-bronchodilator FEV1 % predicted greater than or equal to 30% and less than 80%</li> <li>• Post-bronchodilator forced expiratory volume (FEV1) / forced vital capacity (FVC) ratio less than 0.7</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3 - ONE of the following:</b></p> <p><b>3.1 BOTH of the following:</b></p> <p><b>3.1.1 Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following (document name):</b></p> <ul style="list-style-type: none"> <li>• A LABA/LAMA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat)</li> <li>• A long-acting antimuscarinic agent [LAMA (e.g., Spiriva Respimat/HandiHaler)]</li> <li>• A long-acting beta-agonist [LABA (e.g., Serevent Diskus)]</li> <li>• An ISC/LABA/LAMA (i.e., Breztri Aerosphere, Trelegy Ellipta)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3.1.2 ONE of the following:</b></p> <p><b>3.1.2.1 ALL of the following:</b></p> <ul style="list-style-type: none"> <li>• FEV1 less than 50% of predicted</li> <li>• History of chronic bronchitis</li> <li>• History of failure, contraindication, or intolerance to a selective phosphodiesterase 4 (PDE4) inhibitor [i.e., roflumilast (Daliresp)]</li> </ul> |               |

**OR**

**3.1.2.2** FEV1 is less than 80% of predicted but greater than or equal to 50% of predicted

**OR**

**3.2** BOTH of the following:

**3.2.1** Patient has a failure, contraindication, or intolerance to ALL of the following (document name and date tried):

- A long-acting beta-agonist [LABA (e.g., Serevent Diskus)]
- A long-acting antimuscarinic agent [LAMA (e.g., Spiriva Respimat/HandiHaler)]
- A LABA/LAMA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat),
- An ISC/LABA/LAMA (i.e., Breztri Aerosphere, Trelegy Ellipta)

**AND**

**3.2.2** ONE of the following:

**3.2.2.1** ALL of the following:

- FEV1 less than 50% of predicted
- History of chronic bronchitis
- History of failure, contraindication, or intolerance to a selective phosphodiesterase 4 (PDE4) inhibitor [i.e., roflumilast (Daliresp)]

**OR**

**3.2.2.2** FEV1 is less than 80% of predicted but greater than or equal to 50% of predicted

**OR**

**3.3** ALL of the following:

**3.3.1** Patient is unable to use a metered-dose, dry powder or slow mist inhaler (e.g. Spiriva Respimat) to control their COPD due to ONE of the following:

- Cognitive or physical impairment limiting coordination of handheld devices (e.g., cognitive decline, arthritis in the hands) (Document impairment)
- Patient is unable to generate adequate inspiratory force (e.g., peak inspiratory flow rate (PIFR) resistance is <60 L/min)

**AND**

**3.3.2** Patient requires the use of BOTH of the following (document date)

- A nebulized LABA [i.e., arformoterol (generic Brovana), formoterol (generic Perforomist)]
- A nebulized long-acting antimuscarinic agent [LAMA (i.e.,Yupelri)]

**AND**

**3.3.3** ONE of the following:

**3.3.3.1** ALL of the following:

- FEV1 less than 50% of predicted
- History of chronic bronchitis
- History of failure, contraindication, or intolerance to a selective phosphodiesterase 4 (PDE4) inhibitors [i.e., roflumilast (Daliresp)]

**OR**

**3.3.3.2** FEV1 is less than 80% of predicted but greater than or equal to 50% of predicted

**AND**

**4** - Patient experiences dyspnea during everyday activities (e.g., short of breath when walking up a slight hill)

**AND**

**5** - Prescribed by or in consultation with a Pulmonologist

| Notes                                                                                                     | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

#### Benefit/Coverage/Program Information

**Background:**

Ojjaara (mometinib) is a kinase inhibitor indicated for the treatment of intermediate or high-risk myelofibrosis (MF), including primary MF or secondary MF [postpolycythemia vera (PV) and post-essential thrombocythemia (ET)] with anemia. The National Cancer Comprehensive Network (NCCN) also recommends Ojjaara for the treatment of lower-risk and higher-risk myelofibrosis, and accelerated/blast phase myeloproliferative neoplasms.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limit may be in place.

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is currently on Olumiant therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

**AND**

**2.2.2** Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Eli Lilly sponsored Olumiant Together program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Olumiant\*

**AND**

**3** - Patient is not receiving Olumiant in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

\* Patients requesting initial authorization who were established on therapy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from the Eli Lilly sponsored Olumiant Together program shall be required to meet initial authorization criteria as if patient were new to therapy.

^ Tried/failed alternative(s) are supported by FDA labeling.

## Approval Criteria

1 - Documentation of positive clinical response to Olumiant therapy

**AND**

2 - Patient is not receiving Olumiant in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib), Litfulo (ritlecitinib)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.  
[b] Alopecia areata is not considered cosmetic use.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Olumiant (baricitinib) is a Janus Kinase (JAK) inhibitor indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response to one or more tumor necrosis factor (TNF) antagonist therapies and for the treatment of adult patients with severe alopecia areata. Use of Olumiant in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended. Olumiant is also indicated for the treatment of COVID-19 in hospitalized adults requiring supplemental oxygen, non-invasive or invasive mechanical ventilation, or ECMO. [1]

#### Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Benefit/Coverage/Program Information</b>                                                                                                                                                                                                                                                  |
| <p><b>Background:</b></p> <p>External insulin pumps are used for managing individuals with type 1 or type 2 diabetes and deliver insulin by continuous subcutaneous infusion. Members will be required to meet the following coverage criteria.</p> <p><b>Additional Clinical Rules:</b></p> |

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place
- Coverage is not provided for indications unproven per medical benefit drug policy.

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Opzelura (ruxolitinib) is a Janus kinase (JAK) inhibitor indicated for the topical short term and non-continuous chronic treatment of mild to moderate atopic dermatitis in non-immunocompromised patients 12 years of age and older whose disease is not adequately controlled with topical prescription therapies or when those therapies are not advisable. Opzelura is also indicated for the topical treatment of nonsegmental vitiligo in adult and pediatric patients 12 years of age and older.

Use of Opzelura in combination with therapeutic biologics, other JAK inhibitors or potent immunosuppressants such as azathioprine or cyclosporine is not recommended.

##### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Orilissa (elagolix) is a gonadotropin-releasing hormone (GnRH) receptor antagonist indicated for the management of moderate to severe pain associated with endometriosis.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

1 - Documentation of positive clinical response to Orkambi therapy (e.g., improved lung function, stable lung function)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Orkambi is a combination of lumacaftor and ivacaftor, a cystic fibrosis transmembrane conductance regulator (CFTR) potentiator, indicated for the treatment of cystic fibrosis (CF) in patients aged 1 year and older who are homozygous for the F508del mutation in the CFTR gene. If the patient's genotype is unknown, an FDA-cleared CF mutation test should be used to detect the presence of the F508del mutation on both alleles of the CFTR gene. [1]

##### Limitations of Use:

The efficacy and safety of Orkambi have not been established in patients with CF other than those homozygous for the F508del mutation. [1]

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Osphena (ospemifene) is indicated for the treatment of moderate to severe dyspareunia, a symptom of vulvar and vaginal atrophy due to menopause and for the treatment of moderate to severe vaginal dryness, a symptom of vulvar and vaginal atrophy (VVA) due to menopause.

**Additional Clinical Rules:**

- Supply limits may be in place
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Otezla (apremilast) is a phosphodiesterase 4 (PDE4) inhibitor indicated for the treatment of adult patients with active psoriatic arthritis, for the treatment of adult patients with plaque psoriasis who are candidates for phototherapy or systemic therapy, for the treatment of pediatric patients 6 years of age and older and weighing at least 20 kg with moderate to severe plaque psoriasis who are candidates for phototherapy or systemic therapy, and for the treatment of adult patients with oral ulcers associated with Behçet's disease. [1]

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**Approval Criteria**

**1** - ALL of the following:

**1.1** As continuation of therapy

**AND**

**1.2** Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the manufacturer sponsored support program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Uptravi or Yutrepia

**AND**

**1.3** Patient is not taking Uptravi or Yutrepia in combination with a prostanoid/prostacyclin analogue (e.g., epoprostenol, iloprost, treprostinil)

**AND**

**1.4** Prescribed by or in consultation with a cardiologist, pulmonologist or rheumatologist

**OR**

**2** - ALL of the following:

**2.1** ONE of the following:

**2.1.1** BOTH of the following:

- Pulmonary arterial hypertension is symptomatic
- Diagnosis of pulmonary arterial hypertension that is confirmed by right heart catheterization

**OR**

**2.1.2** Patient is currently on any therapy for the diagnosis of pulmonary arterial hypertension

**AND**

**2.2** History of failure, contraindication, or intolerance to BOTH of the following:

**2.2.1** ONE of the following:

- A PDE-5 inhibitor [e.g., sildenafil citrate (generic Revatio), tadalafil (generic Adcirca)]
- Adempas

**AND**

**2.2.2** An ERA [e.g., ambrisentan (generic Letairis), Opsumit, or bosentan (generic Tracleer)]

**AND**

**2.3** Patient is not taking Upravi or Yutrepia in combination with a prostanoid/prostacyclin analogue (e.g., epoprostenol, iloprost, treprostinil)

**AND**

**2.4** Prescribed by or in consultation with a cardiologist, pulmonologist or rheumatologist

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Pulmonary arterial hypertension (PAH) is often a progressive disease characterized by elevated pressure in the vessels that carry blood between the heart and the lungs. This results in ventricular dysfunction, reduced exercise capacity, the potential for right sided heart failure, and even death.

Several mechanisms have been identified in the pathogenesis of PAH, leading to the development of four classes of medications to treat the disorder. Endothelin receptor antagonists (ERAs), phosphodiesterase-5 (PDE-5) inhibitors, prostacyclin analogs, and soluble guanylate cyclase (sGC) stimulators may be used as monotherapy, sequential combination therapy, or simultaneous combination therapy to treat PAH. [1]

Letairis (ambrisentan), Tracleer (bosentan), and Opsumit (macitentan) are oral endothelin receptor antagonists (ERA). Letairis is indicated for the treatment of PAH (WHO Group 1) to improve exercise ability and delay clinical worsening. It is also indicated in combination with tadalafil to reduce the risk of disease progression and hospitalization for worsening PAH, and to improve exercise ability. [2] Tracleer is indicated for the treatment of PAH (WHO Group 1) to improve exercise ability and to decrease clinical worsening in adult patients, and improve pulmonary vascular resistance, which is expected to result in an improvement in exercise ability in pediatric patients aged 3 years and older. [3] Opsumit is indicated for the treatment of PAH (WHO Group 1) to reduce the risks of disease progression and hospitalization for PAH. [8]

Revatio (sildenafil), Liqrev (tadalafil), Adcirca (tadalafil), Tadliq (tadalafil), and Alyq (tadalafil) are oral PDE-5 inhibitors. Revatio and Liqrev is indicated in pediatric patients 1 to 17 years old for the treatment of PAH (WHO Group 1) to improve exercise ability, in pediatric patients too young to perform standardized exercise testing, pulmonary hemodynamics thought to underly improvements in exercise. Revatio is also indicated in adult patients for the treatment of PAH (WHO Group 1) to improve exercise ability and delay clinical worsening. [4] Adcirca and Alyq are indicated for the treatment of PAH (WHO Group 1) to improve exercise ability. [5, 13]

Ventavis (iloprost) and Tyvaso (treprostinil) are prostacyclin analogs administered as inhalation solutions. Tyvaso DPI (treprostinil) and Yutrepia (treprostinil) are prostacyclin analogs administered as a powder for inhalation. Ventavis is indicated for the treatment of PAH (WHO Group 1) to improve a composite endpoint consisting of exercise tolerance, symptoms (NYHA Class), and lack of deterioration. <sup>6</sup> Tyvaso, Tyvaso DPI, and Yutrepia are indicated for the treatment of PAH (WHO Group 1) to improve exercise ability. They are also indicated for the treatment of pulmonary hypertension associated with interstitial lung disease (WHO Group 3) to improve exercise ability. [7,13,19]

Orenitram (treprostinil) is an orally administered prostacyclin analog indicated for the treatment of PAH (WHO Group 1) to delay disease progression and to improve exercise capacity. [9]

Adempas (riociguat) is a soluble guanylate cyclase (sGC) stimulator indicated for the treatment of adults with PAH (WHO Group 1) to improve exercise capacity, improve WHO functional class and to delay clinical worsening. Adempas is also indicated for the treatment of adults with persistent/recurrent chronic thromboembolic pulmonary hypertension (CTEPH) (WHO Group 4) after surgical treatment or inoperable CTEPH to improve exercise capacity and WHO functional class. [10]

Uptravi (selexipag) is a prostacyclin receptor agonist indicated for the treatment of PAH (WHO Group 1) to delay disease progression and reduce the risk of hospitalization for PAH. [12]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

**Additional Information regarding the endothelin receptor antagonists (Letairis, Opsumit, and Tracleer):**

These agents should be used with caution in patients with liver disease. Use is not recommended in moderate to severe hepatic impairment. Tracleer product labeling includes a black box warning regarding the risk of liver injury. Prescribers are cautioned to consider

whether benefits of use offset the risk of liver injury in WHO Class II patients. Early liver injury may preclude future use as disease progresses. [3]

**Additional Information regarding the oral PDE-5 inhibitors (Revatio, Adcirca, Tadalafil, Liqrev and Alyq):**

Administration of the oral PDE-5 inhibitors to patients taking any form of organic nitrate, either regularly or intermittently, is contraindicated. [4,5] In addition, the concomitant administration of oral PDE-5 inhibitors with Adempas is contraindicated. [9]

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Palynziq is a phenylalanine-metabolizing enzyme indicated to reduce blood phenylalanine concentrations in adult patients with phenylketonuria who have uncontrolled blood phenylalanine concentrations greater than 600 micromol/L on existing management.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

| <p><b>Background:</b></p> <p>Pomalyst (pomalidomide) is a thalidomide analogue indicated for the treatment of adult patients, in combination with dexamethasone, for patients with multiple myeloma who have received at least two prior therapies including Revlimid (lenalidomide) and a proteasome inhibitor [e.g., Velcade® (bortezomib)] and have demonstrated disease progression on or within 60 days of completion of the last therapy. Pomalyst is also indicated for adult patients with AIDS-related Kaposi sarcoma (KS) after failure of highly active antiretroviral therapy (HAART) or in patients with KS who are HIV-negative.[1]</p> <p>The National Comprehensive Cancer Network (NCCN) also recommends use of Pomalyst for the treatment of relapsed/refractory systemic light chain amyloidosis in combination with dexamethasone and, for the treatment of primary central nervous system (CNS) lymphoma. Additionally, Pomalyst is recommended in NCCN for treatment of multiple myeloma in combination of dexamethasone after receiving only one prior line of therapy or for induction therapy for the management of POEMS. [2]</p> <p>Due to embryo-fetal risk (pregnancy category X) associated with Pomalyst; it is available only through the Pomalyst Risk Evaluation and Mitigation Strategy (REMS) Program. Prescribers and pharmacies must be certified with the Pomalyst REMS Program by enrolling and complying with the REMS requirements. Patients must sign a Patient-Physician agreement form and comply with the REMS requirements. Specifically, female patients who are not</p> |

pregnant but can become pregnant must comply with the pregnancy testing and contraception requirements and males must comply with contraception requirements. Pharmacies must only dispense to patients who are authorized to receive the drug and must comply with REMS requirements. Additional information may be found at:

<https://www.pomalystrems.com/index.html>

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Approval Criteria</b></p> <p><b>1 - ONE of the following diagnoses:</b></p> <ul style="list-style-type: none"> <li>Heterozygous familial hypercholesterolemia (HeFH)</li> <li>Atherosclerotic cardiovascular disease (ASCVD) (e.g., acute coronary syndromes, history of myocardial infarction, stable or unstable angina, coronary or other arterial revascularization, stroke, transient ischemic attack, or peripheral arterial disease presumed to be of atherosclerotic origin)</li> <li>Primary hyperlipidemia</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]:</b></p> <p><b>2.1 Patient has been receiving at least 12 consecutive weeks OF HIGH-INTENSITY STATIN THERAPY [i.e., atorvastatin 40-80 mg, rosuvastatin 20-40 mg] and will continue to receive a high-intensity statin at maximally tolerated dose</b></p> <p style="text-align: center;"><b>OR</b></p> <p><b>2.2 BOTH of the following:</b></p> <p><b>2.2.1 Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms:</b></p> <ul style="list-style-type: none"> <li>Myalgia [muscle symptoms without creatine kinase (CK) elevations]</li> </ul> |                                                                                         |

- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

**AND**

**2.2.2** Patient has been receiving at least 12 consecutive weeks of low-intensity or moderate-intensity statin therapy [i.e. atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin  $\geq$  10 mg, pravastatin  $\geq$  10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40mg twice daily or Livalo (pitavastatin)  $\geq$  1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose

**OR**

**2.3** Patient is unable to tolerate LOW OR MODERATE-, AND HIGH-INTENSITY STATINS as evidenced by ONE of the following:

**2.3.1** ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms for low or moderate-, and high-intensity statins:

- Myalgia (muscle symptoms without CK elevations)
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

**OR**

**2.3.2** Patient has a contraindication to all statins as documented in medical records

**OR**

**2.3.3** Patient has experienced rhabdomyolysis or muscle symptoms with statin treatment with CK elevations greater than 10 times ULN

**AND**

**3** - Submission of medical records documenting BOTH of the following:

**3.1** Patient has LDL-C greater than or equal to 55 mg/dL

**AND**

**3.2 ONE of the following:**

- Patient has been receiving at least 12 consecutive weeks of ezetimibe therapy as adjunct to maximally tolerated statin therapy
- Patient has a history of contraindication, or intolerance to ezetimibe

**AND**

**4 - ONE of the following:**

- Patient is less than 10 years of age
- History of failure, contraindication, or intolerance to Repatha (evolocumab) (document date of trial and list reason for therapeutic failure, contraindication, or intolerance)

**AND**

**5 - Prescribed by ONE of the following:**

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**6 - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]**

**AND**

**7 - Not used in combination with Leqvio (inclisiran)**

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**4** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]

**AND**

**5** - Not used in combination with Juxtapid (lomitapide)

**AND**

**6** - History of failure, contraindication, or intolerance to Repatha (evolocumab) (document date of trial and list reason for therapeutic failure, contraindication, or intolerance)

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Praluent (alirocumab) is a PCSK9 (Proprotein Convertase Subtilisin Kexin Type 9) inhibitor indicated: [1]</p> <ul style="list-style-type: none"> <li>• To reduce the risk of myocardial infarction, stroke, and unstable angina requiring hospitalization in adults with established cardiovascular disease.</li> <li>• As adjunct to diet, alone or in combination with other low-density lipoprotein cholesterol (LDL-C) lowering therapies (e.g., statins, ezetimibe, LDL apheresis), for the treatment of adults with primary hyperlipidemia (including heterozygous familial hypercholesterolemia) to reduce LDL-C.</li> <li>• As an adjunct to other LDL-C-lowering therapies in adult patients with homozygous familial hypercholesterolemia (HoFH) to reduce LDL-C.</li> </ul> |

- As an adjunct to diet and other LDL-C-lowering therapies in pediatric patients aged 8 years and older with HeFH to reduce LDL-C.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 5 . Revision History

| Date     | Notes                                                                                                                                                                                                                                                                                                                                                  |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2/6/2025 | Simplified diagnosis requirements for HeFH, ASCVD, and primary hyperlipidemia. Removed diet requirement. Revised HoFH criteria to include more precise genetic terminology to account for genetic test result interpretation complexity as well as digenic mutations. Lowered LDL-C threshold from 100 to 55 mg/dL. Updated background and references. |

Product Name: Medications with a Prior Authorization Requirement without a Drug Specific Guideline, Medications with New FDA-Approved Indications

|                 |                                                                             |
|-----------------|-----------------------------------------------------------------------------|
| Diagnosis       | Prior Authorization Required Medications Used for Cancer Indications<br>[a] |
| Approval Length | 12 month(s)                                                                 |
| Guideline Type  | Administrative Prior Authorization                                          |

### Approval Criteria

**1** - For formulary drugs with a prior authorization requirement, for which a guideline is unavailable, the requested drug will be approved based on ONE of the following criteria:

**1.1** Both of the following:

**1.1.1** Diagnosis is consistent with an indication listed in the product's FDA-approved prescribing information (or package insert)

**AND**

**1.1.2** Additional requirements listed in the "Indications and Usage" and "Dosage and Administration" sections of the prescribing information (or package insert) have been met (e.g.: first line therapies have been tried and failed, any testing requirements have been met, etc.)

**OR**

**1.2** Off-label criteria are met\*

**OR**

**2** - For new FDA-approved indications, which are not addressed in the existing drug-specific prior authorization guideline, the requested drug will be approved based on both of the following criteria:

**2.1** Diagnosis is consistent with an indication listed in the product's FDA-approved prescribing information (or package insert)

**AND**

**2.2** Additional requirements listed in the "Indications and Usage" and "Dosage and Administration" sections of the prescribing information (or package insert) have been met (e.g.: first line therapies have been tried and failed, any testing requirements have been met, etc.)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.  
Authorization will be issued for 12 months.  
\*Reference the Off-label Administrative Guideline.

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

This program is to be administered to medications that have a prior authorization requirement but do not have a drug specific guideline. The program is also to be administered when new FDA-approved indications are not addressed in an existing drug-specific prior authorization guideline.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 3 . Revision History

| Date      | Notes                                                                                                            |

| <p><b>Approval Criteria</b></p> <p>1 - Treatment is for non-infertility use (e.g., secondary amenorrhea, reduce the risk of recurrent spontaneous preterm birth)</p> |                                                                                                                                                                                                                         |
| Notes                                                                                                                                                                | <p>[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.</p> |

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

This program is designed to provide coverage for these medications to be used in conjunction with Assisted Reproductive Technologies (ART) (i.e., in vitro fertilization).

Endometrin® (progesterone inserts) is indicated to support embryo implantation and early pregnancy by supplementation of corpus luteal function as part of an ART treatment program for infertile women.

Crinone (progesterone gel) is indicated for progesterone supplementation or replacement as part of an Assisted Reproductive Technology (ART) treatment for infertile women with progesterone deficiency. Crinone is also indicated for the treatment of secondary amenorrhea.

##### Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Promacta and Alvaiz (eltrombopag) are thrombopoietin receptor agonists indicated for the treatment of thrombocytopenia in adult and pediatric patients (1 year and older for Promacta and 6 years and older for Alvaiz) with persistent or chronic immune thrombocytopenia (ITP) who have experienced an insufficient response to corticosteroids, immunoglobulins, or splenectomy, for the treatment of thrombocytopenia in patients with chronic hepatitis C to allow the initiation and maintenance of interferon-based therapy, and for the treatment of patients with severe aplastic anemia who have had an insufficient response to immunosuppressive therapy. [1] Promacta is also approved in combination with standard immunosuppressive therapy for the first line treatment of adult and pediatric patients 2 years and older with severe aplastic anemia.</p> <p>Promacta and Alvaiz should be used only in patients with ITP whose degree of thrombocytopenia and clinical condition increase the risk for bleeding. [1]</p> |

Promacta and Alvaiz should be used only in patients with chronic hepatitis C whose degree of thrombocytopenia prevents the initiation of interferon-based therapy or limits the ability to maintain interferon-based therapy. Safety and efficacy have not been established in combination with direct-acting antiviral agents used without interferon for treatment of chronic hepatitis C infection. [1]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
|---------------------------------------------|

### Background

Pulmozyme (dornase alfa) is a recombinant deoxyribonuclease (DNase) enzyme indicated in conjunction with standard therapies for the management of cystic fibrosis (CF) patients to improve pulmonary function.

In CF patients with a forced vital capacity (FVC)  $\geq$  40% of predicted, daily administration of Pulmozyme has also been shown to reduce the risk of respiratory tract infections requiring parenteral antibiotics.

### Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Diagnosis</b>                                                               | Treatment of Presbyopia |
| <b>Guideline Type</b>                                                          | Non Formulary           |

### Approval Criteria

1 - Qlosi, Vizz, Brand Vuity, or pilocarpine (generic Vuity) are not considered medically necessary for the treatment of presbyopia based on the definition of medically necessary health care services in the certificate of coverage. All requests for authorization will be denied.

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Qlosi (pilocarpine) 0.4% ophthalmic solution, Vizz (acelidine) 1.44% ophthalmic solution, and Vuity (pilocarpine) 1.25% ophthalmic solution are indicated for the treatment of presbyopia in adults. The efficacy of Qlosi was established in clinical trials with patients aged 45 to 64 years of age with presbyopia, for Vizz in patients 45 to 75 years of age with presbyopia, and for Vuity in patients aged 40 to 55 years of age with presbyopia. The standard of therapy for the treatment of presbyopia is use of corrective lenses, such as glasses and contact lenses, or refractive surgery.

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

## 1 . Criteria

|                                                               |                |
|---------------------------------------------------------------|----------------|
| Product Name:Opioid containing medications for malignant pain |                |
| Approval Length                                               | 12 month(s)    |
| Guideline Type                                                | Administrative |

### Approval Criteria

**1** - In the absence of an opioid-specific quantity limit override guideline, the following approval criteria will be used:

**1.1** Diagnosis of malignant (cancer) pain

**AND**

**1.2** For opioid containing combination products, the total daily dose of the non-opioid component is supported by one of the following references:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- National Comprehensive Cancer Network (NCCN)
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

|                                                                   |                |
|-------------------------------------------------------------------|----------------|
| Product Name:Opioid containing medications for non-malignant pain |                |
| Approval Length                                                   | 12 month(s)    |
| Guideline Type                                                    | Administrative |

### Approval Criteria

**1** - One of the following:

**1.1** Quantity limit override requests must involve an FDA-approved indication

**OR**

**1.2** Quantity limit override requests involving off-label indications must meet off-label guideline requirements\*

**AND**

**2** - One of the following:

**2.1** Higher dose or quantity is supported in the dosage and administration section of the manufacturer's prescribing information

**OR**

**2.2** Higher dose or quantity is supported by one of the following references:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

**AND**

**3** - Quantity requests exceeding the plan's quantity limits will be approved if one of the following criteria are met:

**3.1** The prescriber maintains and provides chart documentation of the patient's evaluation, including all of the following:

- An appropriate patient medical history and physical examination
- A description of the nature and intensity of the pain
- Documentation of appropriate dose escalation
- Documentation of ongoing, periodic review of the course of opioid therapy
- An updated, comprehensive treatment plan (the treatment plan should state objectives that will be used to determine treatment success, such as pain relief or improved physical and/or psychosocial function)
- Verification that the risks and benefits of the use of the controlled substance have been discussed with the patient, significant other(s), and/or guardian

**OR**

**3.2** All of the following:

**3.2.1** Medication is being used to treat postoperative pain

**AND**

**3.2.2** Medication is not being prescribed for pain related to a dental procedure

**AND**

**3.2.3** The dose being prescribed is the dose that the patient was stable on prior to discharge

**AND**

**4** - For opioid combination products, the total daily dose of the non-opioid component must be supported by one of the following references:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

**1.1** Quantity limit override requests must involve an FDA-approved indication

**OR**

**1.2** Quantity limit override requests involving off-label indications must meet off-label guideline approval criteria\*

**AND**

**2** - One of the following:

**2.1** Higher dose or quantity is supported in the dosage and administration section of the manufacturer's prescribing information

**OR**

**2.2** Higher dose or quantity is supported by one of the following resources:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons
- National Comprehensive Cancer Network (NCCN)

**AND**

**3** - One of the following:

**3.1** The requested dosage cannot be achieved using the plan accepted quantity limit of a different dose or formulation (for example, for titration or loading-dose purposes, dose-alternating schedule)

**OR**

**3.2** For glycemic agents prescribed for hypoglycemia treatment (e.g., glucagon), the patient is experiencing or is prone to hypoglycemia

**OR**

**3.3** For diabetic testing products (e.g., glucose control solution), the patient is experiencing or is prone to hypoglycemia or hyperglycemia and requires additional testing to achieve glycemic control

**OR**

**3.4** For antiemetics (e.g., ondansetron), the patient requires a larger quantity due to chemotherapy cycle or surgery

**OR**

**3.5** One of the following:

**3.5.1** Requested strength/dose is commercially unavailable

**OR**

**3.5.2** There is a medically necessary justification why patient cannot use a higher commercially available strength to achieve the same dosage and remain within the same dosing frequency

**AND**

**4** - The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (refer to the Exclusions and Limitations Grid found in the link in the Background section)

| Approval Length                   | 6 month(s)          |
| Guideline Type                    | Prior Authorization |

### Approval Criteria

1 - Patient has a lower extremity diabetic neuropathic ulcer

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Regranex is indicated for the treatment of lower extremity diabetic neuropathic ulcers that extend into the subcutaneous tissue, or beyond, and have an adequate blood supply. Regranex should be used as an adjunct to, and not a substitute for, good ulcer care practices including initial sharp debridement, pressure relief and infection control. The efficacy of Regranex gel has not been established for the treatment of pressure ulcers or venous stasis ulcers.

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Relistor (methylnaltrexone bromide) is an opioid antagonists indicated for the treatment of opioid-induced constipation (OIC) in adult patients with chronic non-cancer pain including patients with chronic pain related to prior cancer or its treatment who do not require frequent (e.g., weekly) opioid dosage escalation. Relistor injection is also indicated for the treatment of opioid-induced constipation in patients with advanced illness or pain caused by active cancer who require opioid dosage escalation for palliative care. Physicians and patients should periodically assess the need for continued treatment with Relistor.</p> <p>This prior authorization program is intended to encourage the use of lower cost alternatives.</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>Supply limits may be in place.</li> </ul> |

| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 12 month(s)                                                                             |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Initial Authorization                                                                   |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Prior Authorization                                                                     |
| <p><b>Approval Criteria</b></p> <p>1 - ONE of the following diagnoses:</p> <p>1.1 Heterozygous familial hypercholesterolemia (HeFH)</p> <p style="text-align: center;"><b>OR</b></p> <p>1.2 Atherosclerotic cardiovascular disease (ASCVD) (e.g., acute coronary syndromes, history of myocardial infarction, stable or unstable angina, coronary or other arterial revascularization, stroke, transient ischemic attack, or peripheral arterial disease presumed to be of atherosclerotic origin)</p> <p style="text-align: center;"><b>OR</b></p> <p>1.3 Primary hyperlipidemia</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of</p> |                                                                                         |

the following [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]:

**2.1** Patient has been receiving at least 12 consecutive weeks of HIGH-INTENSITY STATIN THERAPY [i.e. atorvastatin 40-80 mg, rosuvastatin 20-40 mg] and will continue to receive a high-intensity statin at maximally tolerated dose

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms:

- Myalgia [muscle symptoms without creatine kinase (CK) elevations]
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

**AND**

**2.2.2** Patient has been receiving at least 12 consecutive weeks of low-intensity or moderate-intensity statin therapy [i.e. atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin  $\geq$  10 mg, pravastatin  $\geq$  10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40mg twice daily or Livalo (pitavastatin)  $\geq$  1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose

**OR**

**2.3** Patient is unable to tolerate LOW OR MODERATE-, AND HIGH-INTENSITY STATINS as evidenced by ONE of the following:

**2.3.1** ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms for low or moderate-, and high-intensity statins:

- Myalgia (muscle symptoms without CK elevations)
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

**OR**

**2.3.2** Patient has a contraindication to all statins as documented in medical records

**OR**

**2.3.3** Patient has experienced rhabdomyolysis or muscle symptoms with statin treatment with CK elevations greater than 10 times ULN

**AND**

**3** - Submission of medical records documenting BOTH of the following:

**3.1** Patient has LDL-C greater than or equal to 55 mg/dL

**AND**

**3.2** ONE of the following:

- Patient has been receiving at least 12 consecutive weeks of ezetimibe therapy as adjunct to maximally tolerated statin therapy
- Patient has a history of contraindication, or intolerance to ezetimibe

**AND**

**4** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**5** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab)]

**AND**

**6** - Not used in combination with Leqvio (inclisiran)

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of homozygous familial hypercholesterolemia (HoFH) as confirmed by submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following:</p> <p><b>1.1</b> Genetic confirmation of bi-allelic pathogenic/likely pathogenic variants on different chromosomes at the low-density lipoprotein receptor (LDLR), apolipoprotein B (APOB), proprotein convertase subtilisin kexin type 9 (PCSK9), or low-density lipoprotein receptor adaptor protein 1 (LDLRAP1) genes or <math>\geq 2</math> such variants at different loci</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2</b> BOTH of the following:</p> <p><b>1.2.1</b> Untreated low-density lipoprotein cholesterol (LDL-C) greater than 400 mg/dL</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2.2</b> ONE of the following:</p> <ul style="list-style-type: none"> <li>• Xanthoma before 10 years of age</li> <li>• Evidence of familial hypercholesterolemia in at least one parent</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Patient is receiving other lipid-lowering therapy (e.g., statin, ezetimibe, LDL apheresis)</p> |                                          |

**AND**

**3** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**4** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab)]

**AND**

**5** - Not used in combination with Juxtapid (lomitapide)

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records (e.g. chart notes, laboratory values) documenting LDL-C reduction while on Repatha therapy</p> <p><b>AND</b></p> |                                          |

**2** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**3** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab)]

**AND**

**4** - Not used in combination with Juxtapid (lomitapide)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Repatha (evolocumab) is a PCSK9 (proprotein convertase subtilisin kexin type 9) inhibitor indicated:

- To reduce the risk of major adverse cardiovascular (CV) events (CV death, myocardial infarction, stroke, unstable angina requiring hospitalization, or coronary revascularization) in adults with established cardiovascular disease.
- As an adjunct to diet, alone or in combination with other low-density lipoprotein cholesterol (LDL-c)-lowering therapies in adults with primary hyperlipidemia, including heterozygous familial hypercholesterolemia (HeFH) to reduce LDL-C.
- As an adjunct to other LDL-C-lowering therapies in adults and pediatric patients aged 10 years and older with homozygous familial hypercholesterolemia (HoFH) to reduce LDL-C.
- As an adjunct to diet and other LDL-C-lowering therapies in pediatric patients aged 10 years and older with HeFH to reduce LDL-C

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

## 5 . Revision History

| Date     | Notes                                                                                                                                                                                                                                                                                                                                                  |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2/6/2025 | Simplified diagnosis requirements for HeFH, ASCVD, and primary hyperlipidemia. Removed diet requirement. Revised HoFH criteria to include more precise genetic terminology to account for genetic test result interpretation complexity as well as digenic mutations. Lowered LDL-C threshold from 100 to 55 mg/dL. Updated background and references. |

**1 - Acthar Gel and Purified Cortrophin Gel are unproven and/or not medically necessary for treatment of the following disorders and diseases:**

- Allergic States: Serum sickness, atopic dermatitis
- Collagen Diseases: systemic lupus erythematosus, systemic dermatomyositis (polymyositis)
- Dermatologic Diseases: Severe erythema multiforme, Stevens-Johnson syndrome, severe psoriasis
- Edematous State: To induce a diuresis or a remission of proteinuria in the nephrotic syndrome without uremia of the idiopathic type or that due to lupus erythematosus
- Ophthalmic Diseases: Severe acute and chronic allergic and inflammatory processes involving the eye and its adnexa such as: keratitis, iritis, iridocyclitis, diffuse posterior uveitis and choroiditis, optic neuritis, chorioretinitis, anterior segment inflammation
- Multiple sclerosis: for treatment of acute exacerbations
- Respiratory Diseases: Symptomatic sarcoidosis
- Rheumatic Disorders: psoriatic arthritis, rheumatoid arthritis, including juvenile rheumatoid arthritis, ankylosing spondylitis, acute gouty arthritis
- Any indication outside of the proven indications listed in the coverage criteria

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

Acthar Gel (repository corticotropin injection) and Purified Cortrophin Gel (repository corticotropin injection USP) are adrenocorticotrophic hormone (ACTH) analogues. Repository corticotropin injection and ACTH stimulate the adrenal cortex to secrete cortisol, corticosterone, aldosterone, and a number of weakly androgenic substances. Prolonged administration of large doses of repository corticotropin injection induces hyperplasia and hypertrophy of the adrenal cortex and continuous high output of cortisol, corticosterone and weak androgens. The release of endogenous ACTH is influenced by the nervous system via the regulatory hormone released from the hypothalamus and by a negative corticosteroid feedback mechanism. Elevated plasma cortisol suppresses ACTH release. Repository corticotropin injection also binds to melanocortin receptor. Both endogenous ACTH and repository corticotropin injection have a trophic effect on the adrenal cortex which is mediated by cyclic adenosine monophosphate (cyclic AMP).

The Acthar Gel and Purified Cortrophin Gel package inserts have listed other conditions in which it may be used. UHCP has determined that use of Acthar Gel and Purified Cortrophin Gel is not medically necessary for treatment of the following disorders and diseases: multiple sclerosis; rheumatic; collagen; dermatologic; allergic states; ophthalmic; respiratory; and edematous state.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

- Reblozyl (luspatercept-aamt)

**OR**

**2.2.2 ALL of the following:**

- Serum erythropoietin levels  $\leq 500$  mU/mL
- Ring sideroblasts  $< 15\%$  (or  $< 5\%$  with an SF3B1 mutation)
- Used in combination with an erythropoietin stimulating agent (ESA) [e.g., Epogen, Procrit, Retacrit (epoetin alfa)] or darbepoetin alfa

**OR**

**2.2.3 ALL of the following:**

- Serum erythropoietin levels  $> 500$  mU/mL
- Ring sideroblasts  $< 15\%$  (or  $< 5\%$  with an SF3B1 mutation)
- History of failure, contraindication, intolerance to, or a poor probability of responding to immunosuppressive therapy (e.g., azacitidine, decitabine)

**OR**

**3 - BOTH of the following:**

**3.1 Diagnosis of MDS/MPN overlap neoplasm**

**AND**

**3.2 ONE of the following:**

- Patient has SF3B1 mutation and thrombocytosis
- Patient has ring sideroblasts and thrombocytosis (MDS/MPN-RS-T)

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Background:</b><br><br>Revlimid® (lenalidomide) is a thalidomide analogue indicated for the treatment of adult patients with the following: multiple myeloma (MM), in combination with dexamethasone; MM, as maintenance following autologous hematopoietic stem cell transplantation (auto-HSCT); transfusion-dependent anemia due to low- or intermediate-1-risk myelodysplastic syndromes (MDS) associated with a deletion 5q abnormality with or without additional |

cytogenetic abnormalities; mantle cell lymphoma (MCL) whose disease has relapsed or progressed after two prior therapies, one of which included bortezomib; previously treated follicular lymphoma (FL), in combination with a rituximab product; and previously treated marginal zone lymphoma (MZL), in combination with a rituximab product. [1]

The National Cancer Comprehensive Network (NCCN) also recommends use of Revlimid for treatment of the following B-Cell lymphomas: histologic transformation of indolent lymphomas to diffuse large B-cell lymphoma, mantle cell lymphoma, nodal marginal zone lymphoma, classic follicular lymphoma (grade 1-2), extranodal marginal zone lymphoma of nongastric sites (noncutaneous), extranodal marginal zone lymphoma (EMZL) of the stomach, high-grade B-cell lymphoma, splenic marginal zone lymphoma, post-transplant lymphoproliferative disorders, diffuse large B-cell lymphoma, and HIV-related B-cell lymphomas. Additionally, NCCN recommends the use of Revlimid for Kaposi Sarcoma, primary CNS lymphoma, Castleman disease, chronic lymphocytic leukemia (CLL)/small lymphocytic lymphoma (SLL), MDS/MPN overlap neoplasms, myelofibrosis-associated anemia, systemic light chain amyloidosis, classic Hodgkin lymphoma, Langerhans cell histiocytosis, Rosai-Dorfman disease, and the following T-cell lymphomas: hepatosplenic gamma-delta T-cell lymphoma, peripheral T-cell lymphoma, and adult T-cell leukemia/lymphoma.

Because of the risk of serious malformations if given during pregnancy, there is an extensive risk management program requiring registration by patients, prescribers and dispensing pharmacies. Additional information about the lenalidomide Risk Evaluation and Mitigation Strategy (REMS) [Lenalidomide REMS] program may be found at **Error! Hyperlink reference not valid..** [4]

#### **Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**AND**

**5 - ONE of the following:**

**5.1 Patient is currently treated with ONE of the following prophylactic therapies:**

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)
- Candesartan (Atacand)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig (erenumab), Ajovy (fremanezumab)\*, Emgality (galcanezumab), Qulipta, Vyepti (eptinezumab-jjmr)^]
- Divalproex sodium (Depakote/Depakote ER)
- OnabotulinumtoxinA (Botox) [Note: Coverage of onabotulinumtoxinA (Botox) may be subject to additional benefit and coverage review requirements]
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**5.2 Patient has less than 4 migraine days per month**

**OR**

**5.3 Patient has greater than or equal to 4 migraine days per month and has contraindication or intolerance to ONE of the following prophylactic therapies:**

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)
- Candesartan (Atacand)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig (erenumab), Ajovy (fremanezumab)\*, Emgality (galcanezumab), Qulipta, Vyepti (eptinezumab-jjmr)^]

| <p><b>Background:</b></p> <p>Reyvow (lasmiditan) is a serotonin 5-HT<sub>1F</sub> receptor agonist indicated for the acute treatment of migraine with or without aura in adults. Sedation was reported up to 8 hours after a single dose of Reyvow. Patients should be advised to not engage in activities requiring complete mental alertness, such as driving a motor vehicle or operating machinery, for at least 8 hours after each dose of Reyvow.</p> <p>The American Headache Society recommends use of NSAIDs (including aspirin), non-opioid analgesics, acetaminophen, or caffeinated analgesic combinations (e.g., aspirin/acetaminophen/caffeine) for mild-to-moderate attacks and migraine-specific agents (i.e., triptans, dihydroergotamine [DHE]) for moderate or severe attacks and mild-to-moderate attacks that respond poorly to NSAIDs or caffeinated combinations.</p> |

|                             |                 |

### Approval Criteria

**1** - Documentation of positive clinical response to Rezdiffra therapy (e.g., improvement in or stabilization of fibrosis)

**AND**

**2** - Patient has not progressed to cirrhosis

**AND**

**3** - Prescribed by or in consultation with a gastroenterologist or hepatologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Rezdiffra™ (resmetirom) is a thyroid hormone receptor-beta (THR-beta) agonist indicated in conjunction with diet and exercise for the treatment of adults with noncirrhotic nonalcoholic steatohepatitis (NASH) with moderate to advanced liver fibrosis (consistent with stages F2 to F3 fibrosis). This indication is approved under accelerated approval based on improvement of NASH and fibrosis. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trials.

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Rinvoq (upadacitinib)</b>                                                                                                                                                                                                                                                                                  |
| <b>Rheumatoid Arthritis</b> Indicated for the treatment of adults with moderately to severely active rheumatoid arthritis (RA) who have had an inadequate response or intolerance to one or more tumor necrosis factor (TNF) blockers.                                                                                   |
| <b>Atopic Dermatitis</b> Indicated for the treatment of adults and pediatric patients 12 years of age and older with refractory, moderate to severe atopic dermatitis whose disease is not adequately controlled with other systemic drug products, including biologics, or when use of those therapies are inadvisable. |
| <b>Ulcerative Colitis</b> Indicated for the treatment of adults with moderately to severely active ulcerative colitis who have had an inadequate response or intolerance to one or more TNF blockers.                                                                                                                    |

**Ankylosing Spondylitis** Indicated for the treatment of adults with active ankylosing spondylitis who have had an inadequate response or intolerance to one or more TNF blockers.

**Non-radiographic axial spondyloarthritis** Indicated for the treatment of adults with active non-radiographic axial spondyloarthritis with objective signs of inflammation who have had an inadequate response or intolerance to TNF blocker therapy.

**Crohn's Disease** Indicated in adults with moderately to severely active Crohn's disease who have had an inadequate response or intolerance to one or more TNF blockers.

**Giant Cell Arteritis** Indicated for the treatment of adults with giant cell arteritis.

**Drug Name: Rinvoq (upadacitinib), Rinvoq LQ (upadacitinib) oral solution**

**Polyarticular juvenile idiopathic arthritis** Indicated in patients 2 years of age and older with active polyarticular juvenile idiopathic arthritis who have an inadequate response or intolerance to one or more TNF blockers.

**Psoriatic Arthritis** Indicated for the treatment of adults and pediatric patients 2 years of age and older with active psoriatic arthritis who have an inadequate response or intolerance to one or more TNF blockers.

## 2 . Criteria

|                                                                                                                                        |                           |
|----------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| Product Name:Rinvoq [a]                                                                                                                |                           |
| Diagnosis                                                                                                                              | Rheumatoid Arthritis (RA) |
| Approval Length                                                                                                                        | 12 month(s)               |

| Guideline Type                                                                                                                         | Prior Authorization       |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderately to severely active RA</p> <p style="text-align: center;"><b>AND</b></p> |                           |

**2 - ONE of the following:**

**2.1 BOTH of the following:**

**2.1.1 ONE of the following:**

- History of failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), Olumiant (baricitinib), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**2.1.2 ONE of the following:**

- History of failure, contraindication, or intolerance to at least ONE TNF inhibitor<sup>^</sup>
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [6])

**OR**

**2.2 BOTH of the following:**

- Patient is currently on Rinvoq therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the AbbVie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq\*

**AND**

**3 - Patient is not receiving Rinvoq in combination with EITHER of the following:**

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**4 - Prescribed by or in consultation with a rheumatologist**

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of active psoriatic arthritis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 BOTH of the following:</p> <p>2.1.1 ONE of the following:</p> <p>2.1.1.1 History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)</p> <p style="text-align: center;"><b>OR</b></p> <p>2.1.1.2 Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Olumiant (baricitinib), Otezla (apremilast), Xeljanz/Xeljanz XR (tofacitinib)]</p> |                           |

**AND**

**2.1.2 ONE of the following:**

- History of failure, contraindication, or intolerance to at least ONE TNF inhibitor<sup>^</sup>
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [6])

**OR**

**2.2 BOTH of the following:**

- Patient is currently on Rinvoq or Rinvoq LQ therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the AbbVie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq or Rinvoq LQ\*

**AND**

**3 - Patient is not receiving Rinvoq or Rinvoq LQ in combination with EITHER of the following:**

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**4 - Prescribed by or in consultation with ONE of the following:**

- Rheumatologist
- Dermatologist

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of moderate-to-severe chronic atopic dermatitis</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - ONE of the following:</b></p> <p><b>2.1 BOTH of the following:</b></p> <p><b>2.1.1</b> History of failure, contraindication, or intolerance to BOTH of the following therapeutic classes of topical therapies (document drug, date of trial, and/ or contraindication to medication)</p> <ul style="list-style-type: none"> <li>• Medium to very-high potency topical corticosteroids [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]</li> <li>• Topical calcineurin inhibitor [e.g., tacrolimus (Protopic)]</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2.1.2 ONE of the following:</b></p> <p><b>2.1.2.1 BOTH of the following<sup>^</sup>:</b></p> <ul style="list-style-type: none"> <li>• Submission of medical records (e.g., chart notes, laboratory values) documenting a 3 month trial of a systemic drug product for the treatment of atopic dermatitis [examples include, but are not limited to, Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto), etc.] (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration)</li> <li>• Physician attests that the patient was not adequately controlled with the documented systemic drug product</li> </ul> <p style="text-align: center;"><b>OR</b></p> |                       |

**2.1.2.2** Physician attests that systemic treatment with ALL of the following, FDA-approved chronic atopic dermatitis therapies is inadvisable. (Document drug and contraindication rationale)^

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)
- Ebglyss (lebrikizumab-lbkz)
- Nemluvio (nemolizumab-ilto)

**OR**

**2.1.2.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [6]).

**OR**

**2.2** BOTH of the following:

- Patient is currently on Rinvoq therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the AbbVie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq\*

**AND**

**3** - Patient is NOT receiving Rinvoq in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Cibinqo (abrocitinib), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto), Xeljanz/XR (tofacitinib), Olumiant (baricitinib), Opzelura (topical ruxolitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Dermatologist

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [6])

**OR**

**2.2 BOTH of the following:**

- Patient is currently on Rinvoq therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the AbbVie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq\*

**AND**

**3 - Patient is not receiving Rinvoq in combination with EITHER of the following:**

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), ustekinumab, Skyrizi (risankizumab)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4 - Prescribed by or in consultation with a gastroenterologist**

| Therapy Stage                                                                                                                                                                   | Initial Authorization                                                         |
| Guideline Type                                                                                                                                                                  | Prior Authorization                                                           |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of active ankylosing spondylitis or non-radiographic axial spondyloarthritis</p> <p style="text-align: center;"><b>AND</b></p> |                                                                               |

**2 - ONE of the following:**

**2.1 BOTH of the following:**

**2.1.1 ONE of the following:**

- History of failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis or non-radiographic axial spondyloarthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**2.1.2 ONE of the following:**

- History of failure, contraindication, or intolerance to at least ONE TNF inhibitor<sup>^</sup>
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5])

**OR**

**2.2 BOTH of the following:**

- Patient is currently on Rinvoq therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the AbbVie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq\*

**AND**

**3 - Patient is not receiving Rinvoq in combination with EITHER of the following:**

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib)]

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderately to severely active Crohn's disease</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 BOTH of the following:</p> <p>2.1.1 ONE of the following:</p> <p>2.1.1.1 History of failure to ONE of the following conventional therapies at up to maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):</p> <ul style="list-style-type: none"> <li>• Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)</li> <li>• 6-mercaptopurine (Purinethol)</li> <li>• Azathioprine (Imuran)</li> <li>• Methotrexate (Rheumatrex, Trexall)</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p>2.1.1.2 Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of Crohn's disease as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Cimzia (certolizumab), ustekinumab, Skyrizi (isankizumab)]</p> |                       |

**AND**

**2.1.2 ONE of the following:**

- History of failure, contraindication, or intolerance to at least one TNF inhibitor^
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria<sup>5</sup>).

**OR**

**2.2 BOTH of the following:**

- Patient is currently on Rinvoq therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the AbbVie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq\*

**AND**

**3 - Patient is not receiving Rinvoq in combination with EITHER of the following:**

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), ustekinumab, Skyrizi (risankizumab)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4 - Prescribed by or in consultation with a gastroenterologist**

## **Approval Criteria**

**1** - Diagnosis of active polyarticular juvenile idiopathic arthritis

**AND**

**2** - ONE of the following:

**2.1** History of failure, contraindication, or intolerance to at least ONE TNF inhibitor^

**OR**

**2.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5]).

**OR**

**2.3** BOTH of the following:

- Patient is currently on Rinvoq or Rinvoq LQ therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the AbbVie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq or Rinvoq LQ\*

**AND**

**3** - Patient is not receiving Rinvoq or Rinvoq LQ in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Olumiant (baricitinib), Xeljanz (tofacitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

## Approval Criteria

1 - Documentation of positive clinical response to Rinvoq therapy

**AND**

2 - Patient is not receiving Rinvoq in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Olumiant (baricitinib), tocilizumab, Xeljanz (tofacitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Rinvoq is a Janus kinase (JAK) inhibitor, Rinvoq and/or Rinvoq LQ is indicated for the treatment of:

- Adults with moderately to severely active rheumatoid arthritis (RA) who have had an inadequate response or intolerance to one or more tumor necrosis factor (TNF) blocker.

Limitation of Use: The use of Rinvoq in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

- Adults and pediatric patients 2 years of age and older with active psoriatic arthritis who have an inadequate response or intolerance to one or more TNF blockers.

Limitation of Use: Rinvoq/Rinvoq LQ is not recommended for use in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine.

- Adults and pediatric patients 12 years of age and older with refractory, moderate to severe atopic dermatitis whose disease is not adequately controlled with other systemic drug products, including biologics, or when use of those therapies are inadvisable.

Limitation of Use: Rinvoq is not recommended in combination with other JAK inhibitors, biologic immunomodulators, or with other immunosuppressants.

- Adults with moderately to severely active ulcerative colitis who have had an inadequate response or intolerance to one or more TNF blockers.

Limitations of Use: Rinvoq is not recommended for use in combination with other JAK inhibitors, biological therapies for ulcerative colitis, or with other potent immunosuppressants such as azathioprine and cyclosporine.

Rinvoq should be discontinued if adequate therapeutic response is not achieved with the 30 mg dosage. Use the lowest effective dosage needed to maintain response.

- Adults with active ankylosing spondylitis who have had an inadequate response or intolerance to one or more TNF blockers.

Limitations of Use: Rinvoq is not recommended for use in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine.

- Adults with active non-radiographic axial spondyloarthritis with objective signs of inflammation who have had an inadequate response or intolerance to TNF blocker therapy.

Limitations of Use: Rinvoq is not recommended for use in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine.

- Adults with moderately to severely active Crohn's disease who have had an inadequate response or intolerance to one or more TNF blockers.

Limitations of Use: Rinvoq is not recommended for use in combination with other JAK inhibitors, biological therapies for Crohn's disease, or with potent immunosuppressants such as azathioprine and cyclosporine

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Patients 2 years of age and older with active polyarticular juvenile idiopathic arthritis who have an inadequate response or intolerance to one or more TNF blockers.

Limitation of Use: Rinvoq/Rinvoq LQ is not recommended for use in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine.

- Adults with giant cell arteritis.

*Limitation of Use:*

Rinvoq is not recommended for use in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Rivfloza (nedosiran) is an LDHA-directed small interfering RNA indicated to lower urinary oxalate levels in children 9 years of age and older and adults with primary hyperoxaluria type 1 (PH1) and relatively preserved kidney function, e.g., eGFR  $\geq$  30 mL/min/1.73 m<sup>2</sup>.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

## Approval Criteria

1 - Documentation of positive clinical response to Rozlytrek therapy

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

#### Background:

Rozlytrek™ (entrectinib) is a kinase inhibitor indicated for the treatment of:

- Adult patients with ROS1-positive metastatic non-small cell lung cancer (NSCLC).
- Adult and pediatric patients 1 month of age and older with solid tumors that:
  - have a neurotrophic tyrosine receptor kinase (NTRK) gene fusion without a known acquired resistance mutation,
  - are metastatic or where surgical resection is likely to result in severe morbidity, and
  - have progressed following treatment or have no satisfactory alternative therapy

This indication is approved under accelerated approval based on tumor response rate and durability of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in the confirmatory trials.[1]

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**3** - Submission of medical records documenting a history of failure, contraindication, or intolerance to ONE of the following:

- Icatibant (generic Firazyr)
- Sajazir (icatibant)

**AND**

**4** - Prescribed by ONE of the following:

- Immunologist
- Allergist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Ruconest [a]

Approval Length

12 month(s)

Therapy Stage

Reauthorization

Guideline Type

Non Formulary

**Approval Criteria**

**1** - Documentation of positive clinical response to Ruconest therapy

**AND**

**2** - BOTH of the following:

**2.1** Prescribed for the acute treatment of HAE attacks

**AND**

**2.2** Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Berinert, Firazyr)

**AND**

**3** - Prescribed by ONE of the following:

- Immunologist
- Allergist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Ruconest (C1 esterase inhibitor [recombinant]) is indicated for the treatment of acute attacks in adult and adolescent patients with hereditary angioedema (HAE). Effectiveness was not established in HAE patients with laryngeal attacks.

##### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Samsca is a selective vasopressin V<sub>2</sub>-receptor antagonist indicated for the treatment of clinically significant hypervolemic and euvolemic hyponatremia (serum sodium &lt; 125 mEq/L or less marked hyponatremia that is symptomatic and has resisted correction with fluid restriction), including patients with heart failure and Syndrome of Inappropriate Antidiuretic Hormone (SIADH). [1]</p> |

**Limitations of Use:**

- Patients requiring intervention to raise serum sodium urgently to prevent or to treat serious neurological symptoms should not be treated with Samsca.
- It has not been established that Samsca provides a symptomatic benefit to patients.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**Product Name:** Brand Sandostatin, generic octreotide [a]

|                 |                             |
|-----------------|-----------------------------|
| Diagnosis       | Thymoma or Thymic Carcinoma |
| Approval Length | 12 month(s)                 |
| Therapy Stage   | Initial Authorization       |
| Guideline Type  | Prior Authorization         |

**Approval Criteria**

**1** - Diagnosis of thymoma or thymic carcinoma

**AND**

**2** - ONE of the following:

**2.1** Used as a second-line therapy for ONE of the following:

- Unresectable locally advanced disease
- Solitary metastasis or ipsilateral pleural metastasis
- Extrathoracic metastatic disease

**OR**

**2.2** BOTH of the following:

**2.2.1** Used as first line therapy for ONE of the following:

- Potentially resectable locally advanced disease
- Potentially resectable solitary metastasis or ipsilateral pleural metastasis
- Consideration following surgery for solitary metastasis or ipsilateral pleural metastasis
- Medically inoperable/unresectable solitary metastasis or ipsilateral pleural metastasis

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Background</b><br><br>Sandostatin (octreotide acetate) is indicated to reduce blood levels of growth hormone and IGF-I (somatomedin C) in acromegaly patients who have had inadequate response to or cannot be treated with surgical resection, pituitary irradiation and bromocriptine mesylate at maximally tolerated doses. It is also indicated for the symptomatic treatment of patients with metastatic carcinoid tumors where it suppresses or inhibits the severe diarrhea and flushing episodes associated with the disease and for the treatment of profuse watery diarrhea associated with vasoactive intestinal peptide (VIP)-secreting tumors.<br><br>The National Comprehensive Cancer Network (NCCN) recommends the use of octreotide acetate for the treatment of thymomas and thymic carcinomas as well as meningiomas. The NCCN also recommends octreotide acetate for the treatment of several types of |

neuroendocrine and adrenal tumors, including neuroendocrine tumors of the gastrointestinal tract, lung and thymus, neuroendocrine tumors of the pancreas, well-differentiated Grade 3 neuroendocrine tumors, pheochromocytoma/paraganglioma. The NCCN Palliative Care Guidelines recommend octreotide for the treatment of chemotherapy and/or radiation-induced diarrhea and malignant bowel obstruction.[3]

Clinical evidence supports the use of octreotide acetate as an adjunct to endoscopic therapy for bleeding gastroesophageal varices associated with liver disease.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

**Drug Name:** Javygtor (sapropterin dihydrochloride), Kuvan (sapropterin dihydrochloride), Sapropterin dihydrochloride

**Reduction of blood phenylalanine (Phe) levels** Indicated to reduce blood phenylalanine (Phe) levels in adult and pediatric patients one month of age and older with hyperphenylalaninemia (HPA) due to tetrahydrobiopterin- (BH4-) responsive Phenylketonuria (PKU). Javygtor and Kuvan are to be used in conjunction with a Phe-restricted diet.

## 2 . Criteria

Product Name: Brand Javygtor, Brand Kuvan, generic sapropterin [a]

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Javygtor and Kuvan are phenylalanine hydroxylase activators indicated to reduce blood phenylalanine (Phe) levels in adult and pediatric patients one month of age and older with hyperphenylalaninemia (HPA) due to tetrahydrobiopterin- (BH4-) responsive Phenylketonuria (PKU). Javygtor and Kuvan are to be used in conjunction with a Phe-restricted diet.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may also be in place.

## 1 . Indications

|                                                                                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Sensipar (cinacalcet)</b>                                                                                                                                                                                                           |
| <b>Secondary hyperparathyroidism</b> Indicated for the treatment of secondary hyperparathyroidism (HPT) in adult patients with chronic kidney disease on dialysis.                                                                                |
| <b>Parathyroid carcinoma</b> Indicated for the treatment of hypercalcemia in patients with parathyroid carcinoma.                                                                                                                                 |
| <b>Primary hyperparathyroidism</b> Indicated for the treatment of hypercalcemia in patients with primary HPT for whom parathyroidectomy would be indicated on the basis of serum calcium levels, but who are unable to undergo parathyroidectomy. |

## 2 . Criteria

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                  |

| Notes                                                                                                      | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Signifor (pasireotide diaspertate) is a somatostatin analog indicated for the treatment of adult patients with Cushing's disease for whom pituitary surgery is not an option or has not been curative. [1]

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### Note:

\*This program applies to the subcutaneous formulation of golimumab.

## 1 . Indications

|                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Simponi (golimumab)</b>                                                                                                                                              |
| <b>Rheumatoid Arthritis</b> Indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis (RA) in combination with methotrexate (MTX). [1] |
| <b>Psoriatic Arthritis</b> Indicated alone or in combination with methotrexate for the treatment of adult patients with active psoriatic arthritis (PsA). [1]                      |
| <b>Ankylosing Spondylitis</b> Indicated for the treatment of adult patients with active ankylosing spondylitis (AS). [1]                                                           |

**Ulcerative Colitis** Indicated in adult patients with moderate to severe ulcerative colitis who require continuous steroid therapy or who have had an inadequate response to or intolerance to prior treatment. It is indicated for inducing and maintaining clinical response, improving endoscopic appearance of the mucosa during induction, inducing clinical remission, and achieving and sustaining clinical remission in induction responders. [1]

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                           |

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderately to severely active rheumatoid arthritis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p><b>2.1</b> History of failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>2.2</b> Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Humira (adalimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]</p> |                           |

**OR**

**2.3 BOTH of the following:**

- Patient is currently on Simponi therapy as documented by claims history or submission of medical records (Document date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Simponi\*

**AND**

**3** - Patient is not receiving Simponi in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <h3>Approval Criteria</h3> <p>1 - Diagnosis of active psoriatic arthritis</p> <p><b>AND</b></p> <p>2 - ONE of the following:</p> <p><b>2.1</b> History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date, and duration of trial)</p> |                           |

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Humira (adalimumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Otezla (apremilast), Rinvoq (upadacitinib)]

**OR**

**2.3** BOTH of the following:

- Patient is currently on Simponi therapy as documented by claims history or submission of medical records (Document date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Simponi\*

**AND**

**3** - Patient is not receiving Simponi in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

**1 - Diagnosis of active ankylosing spondylitis**

**AND**

**2 - ONE of the following:**

**2.1** History of failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trials)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Xeljanz/Xeljanz XR (tofacitinib), Rinvoq (upadacitinib)]

**OR**

**2.3 BOTH of the following:**

- Patient is currently on Simponi therapy as documented by claims history or submission of medical records (Document date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Simponi\*

**AND**

**3 - Patient is not receiving Simponi in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Orencia (abatacept), adalimumab, Xeljanz/Xeljanz XR (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]**

**AND**

**4 - Prescribed by or in consultation with a rheumatologist**

|                                                      |                         |
|------------------------------------------------------|-------------------------|
| Product Name:Simponi (subcutaneous formulations) [a] |                         |
| Diagnosis                                            | Ulcerative Colitis (UC) |
| Approval Length                                      | 12 month(s)             |
| Therapy Stage                                        | Initial Authorization   |
| Guideline Type                                       | Prior Authorization     |

**Approval Criteria**

**1** - Diagnosis of moderately to severely active ulcerative colitis

**AND**

**2** - ONE of the following:

**2.1** Patient has had prior or concurrent inadequate response to a therapeutic course of oral aminosalicylates, oral corticosteroids, azathioprine, or 6-mercaptopurine^

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, ustekinumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**OR**

**2.3** BOTH of the following:

- Patient is currently on Simponi therapy as documented by claims history or submission of medical records (Document date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Simponi\*

**AND**

**3** - Patient is not receiving Simponi in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)]

**AND**

### 3 . Background

#### Benefit/Coverage/Program Information

**Background:**

Simponi (golimumab) is a tumor necrosis factor (TNF) blocker, indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis (RA) in combination with methotrexate (MTX). [1] Simponi, alone or in combination with methotrexate, is indicated for the treatment of adult patients with active psoriatic arthritis (PsA). [1] It is also indicated for the treatment of adult patients with active ankylosing spondylitis (AS).[1] Simponi is also indicated in adult patients with moderate to severe ulcerative colitis who require continuous steroid therapy or who have had an inadequate response to or intolerance to prior treatment. For ulcerative colitis, it is indicated for inducing and maintaining clinical response, improving endoscopic appearance of the mucosa during induction, inducing clinical remission, and achieving and sustaining clinical remission in induction responders. [1]

An intravenous formulation of golimumab, Simponi Aria, is also available. Simponi Aria is indicated for adult patients with moderately to severely active rheumatoid arthritis in combination with methotrexate, active psoriatic arthritis in patients 2 years of age and older, adult patients with active ankylosing spondylitis, and active polyarticular Juvenile Idiopathic Arthritis (pJIA) in patients 2 years of age and older.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

- Sulfamethoxazole-trimethoprim (SMX-TMP)
- A tetracycline
- Clindamycin

**OR**

**4 - ALL of the following:**

**4.1** Diagnosis of acute bacterial skin and skin structure infection (including diabetic foot infections)

**AND**

**4.2** Infection caused by an organism that is confirmed to be or likely to be susceptible to treatment with Sivextro

**AND**

**4.3** History of failure, contraindication, or intolerance to linezolid (generic Zyvox)

**AND**

**4.4** History of failure, contraindication, or intolerance to TWO of the following:

- A penicillin
- A cephalosporin
- A tetracycline
- Clindamycin
- Sulfamethoxazole-trimethoprim (SMX-TMP)
- A fluoroquinolone

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Sivextro is indicated for the treatment of acute bacterial skin and skin structure infections (ABSSSI) caused by susceptible isolates of the following gram-positive microorganisms: Staphylococcus aureus (including methicillin-resistant [MRSA] and methicillin-susceptible</p> |

[MSSA] isolates), *Streptococcus pyogenes*, *Streptococcus agalactiae*, *Streptococcus anginosus* Group (including *Streptococcus anginosus*, *Streptococcus intermedius*, and *Streptococcus constellatus*), and *Enterococcus faecalis*.

To reduce the development of drug-resistant bacteria and maintain the effectiveness of Sivextro and other antibacterial drugs, Sivextro should be used only to treat ABSSSI that are proven or strongly suspected to be caused by susceptible bacteria.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderate to severe plaque psoriasis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 ALL of the following:</p> <p>2.1.1 Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis</p> <p style="text-align: center;"><b>AND</b></p> <p>2.1.2 History of failure to ONE of the following topical therapies, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):</p> <ul style="list-style-type: none"> <li>• Corticosteroids (e.g., betamethasone, clobetasol, desonide)</li> <li>• Vitamin D analogs (e.g., calcitriol, calcipotriene)</li> <li>• Tazarotene</li> <li>• Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)</li> </ul> |                       |

- Coal tar

**AND**

**2.1.3** History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Bimzelx (bimekizumab-bkzx), Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Ilumya (tildrakizumab), Otezla (apremilast), Siliq (brodalumab), Sotyktu (deucravacitinib), Taltz (ixekizumab), Tremfya (guselkumab), ustekinumab]

**OR**

**2.3** BOTH of the following:

- Patient is currently on Skyrizi therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Abbvie sponsored Skyrizi Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Skyrizi\*

**AND**

**3** - Patient is not receiving Skyrizi in combination with another targeted immunomodulator [e.g., adalimumab, Bimzelx (bimekizumab-bkzx), Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Ilumya (tildrakizumab), Otezla (apremilast), Siliq (brodalumab), Sotyktu (deucravacitinib), Taltz (ixekizumab), Tremfya (guselkumab), ustekinumab]

**AND**

**4** - Prescribed by or in consultation with a dermatologist

## **Approval Criteria**

**1** - Diagnosis of active psoriatic arthritis

**AND**

**2** - ONE of the following:

**2.1** History of failure to a 3 month trial of methotrexate at the maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Bimzelx (bimekizumab-bkzx), Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Orencia (abatacept), Otezla (apremilast), Rinvoq (upadacitinib), Simponi (golimumab), Taltz (ixekizumab), Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), ustekinumab]

**OR**

**2.3** BOTH of the following:

- Patient is currently on Skyrizi therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Abbvie sponsored Skyrizi Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Skyrizi\*

**AND**

**3** - Patient is not receiving Skyrizi in combination with another targeted immunomodulator [e.g., adalimumab, Bimzelx (bimekizumab-bkzx), Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Orencia (abatacept), Otezla (apremilast), Rinvoq

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

(upadacitinib), Simponi (golimumab), Taltz (ixekizumab), Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), ustekinumab]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

\* Patients requesting initial authorization who were established on therapy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from the Abbvie sponsored Skyrizi Complete program shall be required to meet initial authorization criteria as if patient were new to therapy.

## 2 . Criteria

|                            |            |
|----------------------------|------------|
| Product Name: Somavert [a] |            |
| Diagnosis                  | Acromegaly |

|                 |                       |
|-----------------|-----------------------|
| Approval Length | 12 month(s)           |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Prior Authorization   |

**Approval Criteria**

**1 - ALL of the following:**

**1.1** Diagnosis of acromegaly confirmed by ONE of the following:

- Serum GH level greater than 1 ng/mL after a 2-hour oral glucose tolerance test (OGTT) at time of diagnosis
- Elevated serum IGF-1 levels (above the age and gender adjusted normal range as provided by the physician's lab) at time of diagnosis

**AND**

**1.2** ONE of the following:

**1.2.1** Inadequate response to ONE of the following:

- Surgery
- Radiation therapy
- Dopamine agonist (e.g., bromocriptine, cabergoline) therapy

**OR**

**1.2.2** Not a candidate for ANY of the following:

- Surgery
- Radiation therapy
- Dopamine agonist (e.g., bromocriptine, cabergoline) therapy

**AND**

**1.3** Inadequate response, intolerance, or contraindication to a long-acting somatostatin analog [e.g., Sandostatin LAR (octreotide), Somatuline Depot (lanreotide)]

## Background

Somavert (pegvisomant) is a growth hormone receptor antagonist indicated for the treatment of acromegaly in patients who have had an inadequate response to surgery or radiation therapy, or for whom these therapies are not appropriate. The goal of treatment is to normalize serum insulin-like growth factor-I (IGF-I) levels.<sup>1</sup>

The American Association of Clinical Endocrinologists (AACE), Pituitary Society (PS) and Acromegaly Consensus Group (ACG) recommend pegvisomant in patients for whom surgical treatment and somatostatin analogues (SSAs) have proved ineffective or for those who are intolerant of SSAs.<sup>2,4-6</sup> The AACE, Endocrine Society (ES), and ACG also recommend that dopamine agonists may be considered as first-line medical therapy, particularly in patients with mild biochemical activity, such as in the setting of modestly elevated serum IGF-I levels in the absence or concomitant presence of SSA therapy.<sup>2,3,5,6</sup>

#### Benefit/Coverage/Program Information

##### Background:

Spevigo is an interleukin-36 receptor antagonist indicated for the treatment of generalized pustular psoriasis (GPP) in adults and pediatric patients 12 years of age and older and weighing at least 40 kg.

##### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

If criteria are met, enter one GPI-12 authorization with an MDD override of 1 and a PQE of 24 per 28 days.</p> |

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Spravato (esketamine) is a non-competitive N-methyl D-aspartate (NMDA) receptor antagonist indicated, for the treatment of :

- Treatment-resistant depression (TRD) in adults, as monotherapy or in conjunction with an oral antidepressant.
- Depressive symptoms in adults with major depressive disorder (MDD) with acute suicidal ideation or behavior in conjunction with an oral antidepressant.

Limitations of Use: The effectiveness of Spravato in preventing suicide or in reducing suicidal ideation or behavior has not been demonstrated. Use of Spravato does not preclude the need for hospitalization if clinically warranted, even if patients experience improvement after an initial dose of Spravato. Spravato is not approved as an anesthetic agent. The safety and effectiveness of Spravato as an anesthetic agent have not been established.

Because of the risks of serious adverse outcomes resulting from sedation, dissociation, and abuse and misuse, Spravato is only available through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the Spravato REMS.

For the purposes of this program, a trial and failure of a given antidepressant is defined as the patient unable to achieve a clinical meaningful improvement of the maximally tolerated dose(s) for at least 8 weeks.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4/3/2025 | Revised options for clinical assessments to reflect different item versions of the same scale as well as added BDI. Removed requirement for combination with oral antidepressant for TRD per updated label. Revised coverage criteria for TRD to require history of failure of a trial of at least two different antidepressant medications or treatment regimens, remove reference to current depressive episode, and remove augmentation with anticonvulsants as a treatment regimen based on latest clinical evidence. Updated references. |

| <p><b>Philadelphia Chromosome-Positive Chronic Myeloid Leukemia (Ph+ CML)</b> Indicated for newly diagnosed adults with Philadelphia chromosome-positive (Ph+) chronic myeloid leukemia (CML) in chronic phase. It is also indicated for the treatment of pediatric patients 1 year of age and older with Ph+ CML in chronic phase.</p> <p><b>Philadelphia Chromosome-Positive Acute Lymphoblastic Leukemia (Ph+ALL)</b> FDA-labeled for treatment of adults with Philadelphia chromosome-positive acute lymphoblastic leukemia with resistance or intolerance to prior therapy. It is also indicated for the treatment of pediatric patients 1 year of age and older with newly diagnosed Ph+ ALL in combination with chemotherapy.</p> <p><b>Gastrointestinal stromal tumor</b> National Comprehensive Cancer Network (NCCN) also approves of the use of Sprycel in gastrointestinal stromal tumor in patients with PDGFRA exon 18 mutations.</p> |

**Metastatic chondrosarcoma** The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in metastatic chondrosarcoma.

**Chordoma** The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in recurrent chordoma.

**BCR-ABL1-Positive Chronic Myelogenous / Myeloid Leukemia** The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in BCR-ABL1 positive CML.

**Myeloid/lymphoid neoplasms** The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in myeloid/lymphoid neoplasms with eosinophilia and ABL1 rearrangement.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                          |

| <b>Approval Criteria</b><br><br>1 - Documentation of positive clinical response to Sprycel therapy |                                                                                                                                                                                                                  |
| Notes                                                                                              | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Sprycel (dasatinib) is a tyrosine kinase inhibitor indicated for newly diagnosed adults with Philadelphia chromosome-positive (Ph+) chronic myeloid leukemia (CML) in chronic phase. Sprycel is also indicated for treatment of adults with chronic, accelerated, or myeloid or lymphoid blast phase Ph+ CML with resistance or intolerance to prior therapy including imatinib, for treatment of adults with Ph+ acute lymphoblastic leukemia (ALL) with resistance or intolerance to prior therapy, for the treatment of pediatric patients 1 year of age and older with Ph+ CML in chronic phase, and for the treatment of pediatric patients 1 year of age and older with Ph+ ALL in combination with chemotherapy.<sup>1</sup> The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in the following: BCR-ABL1 positive CML, in gastrointestinal stromal tumor in patients with PDGFRA exon 18 mutations, metastatic chondrosarcoma, in recurrent chordoma and in myeloid/lymphoid neoplasms with eosinophilia and ABL1 rearrangement, and in cutaneous melanoma with metastatic or unresectable tumors with activating mutations of KIT as second-line or subsequent therapy for disease progression, intolerance, and/or projected risk of progression with BRAF-targeted therapy.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may be in place

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

This document serves as a resource to highlight individual state mandates that may impact existing utilization management programs. Utilization programs include but are not limited to step therapy, prior authorization, supply limits, first-line trial duration limitations and pain therapy/end of life regulations. Select state mandates may require medical records for documentation. New and revised mandates will be reviewed quarterly with the Utilization Management (UM) committee.

*This resource only focuses on sections of state mandates that pertain to utilization management programs. This reference document does not cite full state mandates.*

#### 1. Arizona:

##### a. Step Therapy Exception, AZ21-18132471 CS EI, ARS §20-3604 (effective 1/1/23)

A step therapy exception request shall be granted if sufficient justification to establish that any of the following applies:

- The prescription drug required by the step therapy protocol is contraindicated or will likely cause a serious adverse reaction by or physical or mental harm to the patient.
- The prescription drug required by the step therapy protocol is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen.
- The patient has tried the prescription drug required by the step therapy protocol while under the patient's current or previous health care plan, or another prescription drug in the same pharmacological class with a similar efficacy and side effect profile or with the same mechanism of action, the patient's adherence during the trial was for a period of time sufficient to allow for a positive treatment outcome and the prescription drug was discontinued due to lack of efficacy or effectiveness, an adverse event or contraindication.
- The prescription drug required by the step therapy protocol is not in the best interest of the patient based on medical necessity because the patient's use of the prescription drug is expected to cause any of the following:
  - o A barrier to the patient's adherence to or compliance with the patient's plan of care.
  - o A negative impact on the patient's comorbid conditions.

- o A clinically predictable negative drug interaction.
- o A decrease in the patient's ability to achieve or maintain a reasonably functional ability in performing daily activities for which the patient has experienced a positive therapeutic outcome.
- The patient has experienced a positive therapeutic outcome on a prescribed drug selected by the patient's health care provider for the medical condition under consideration while on the patient's current or previous health care plan.

A health care provider may not use a pharmaceutical sample for the purpose of qualifying for an exception to step therapy under this paragraph.

## **2. Colorado:**

### **a. Step Therapy Exception for Metastatic Cancer, CO22-21309458 C.R.S. §10-16-145.5 (effective 01/01/2023)**

A carrier that provides coverage under a health benefit plan for the treatment of stage four advanced metastatic cancer shall not limit or exclude coverage under the health benefit plan for a drug approved by the FDA and that is on the carrier's prescription drug formulary by mandating that a covered person with stage four advanced metastatic cancer undergo STEP THERAPY if the use of the approved drug is consistent with:

- The FDA-approved indication or
- The National Comprehensive Cancer Network Drugs and Biologics Compendium indication for the treatment of stage four advanced metastatic cancer; or
- Peer-reviewed medical literature.

### **b. Step Therapy Exception, CO22-21309458 CS EI C.R.S. §10-16-145 (effective 1/1/24)**

A carrier, a private utilization review organization, or a PBM shall grant an exception to step therapy if the prescribing provider submits justification and supporting clinical documentation, if needed, that states:

- The provider attests that the required prescription drug is contraindicated or will likely cause an adverse reaction or harm to the covered person;
- The required prescription drug is ineffective based on the known clinical characteristics of the covered person and the known characteristics of the prescription drug regimen;
- The covered person has tried, while under the covered person's current or previous health benefit plan, the required prescription drug or another prescription drug in the same

pharmacologic class or with the same mechanism of action, and the use of the prescription drug by the covered person was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event;

- The covered person, while on the covered person's current or previous health benefit plan, is stable on a prescription drug selected by the prescribing provider for the medical condition under consideration after undergoing step therapy or after having sought and received a step-therapy exception.

This section does not prohibit a carrier, an organization, or a PBM from requiring a covered person to try a generic equivalent drug, a biosimilar drug, or an interchangeable biological product unless the covered person or covered person's prescribing provider has requested a step-therapy exception and the prescribed drug meets the criteria for a step-therapy section as specified in this section.

**c. Step Therapy Exception for Serious Mental Illness, CO25.5-5-516 (effective 1/1/2025)**

If a covered person's provider attests that any of the criteria are met, the carrier, private utilization review organization, or PBM must cover the drug prescribed by the covered person's provider without requiring step therapy.

Serious mental illness means the following psychiatric illnesses, as defined by the American Psychiatric Association in the most recent version of the Diagnostic and Statistical Manual of Mental Disorders: bipolar disorders, depression in childhood and adolescence, major depressive disorders, obsessive-compulsive disorders, paranoid and other psychotic disorders, schizoaffective disorders, schizophrenia.

**3. Florida:**

**a. Step Therapy Exception FL22-21161145 EI §641.31 F.S. (effective 7/1/2022)**

A health insurer issuing a major medical individual or group policy may not require a step-therapy protocol under the policy for a covered prescription drug requested by an insured if:

1. The subscriber has previously been approved to receive the prescription drug through the completion of a step-therapy protocol required by a separate health coverage plan; and

2. The subscriber provides documentation originating from the health coverage plan that approved the prescription drug as described in subparagraph 1. indicating that the health coverage plan paid for the drug on the subscriber's behalf during the 90 days immediately before the request. A health maintenance organization may request relevant medical records in support of a protocol exemption request. This subsection does not require a health maintenance organization to add a drug to its prescription drug formulary or to cover a prescription drug that the health maintenance organization does not otherwise cover.

#### **4. Georgia:**

##### **a. Step Therapy Exception GA19-12787856 El O.C.G.A §33-24-59.25 (effective 1/1/2020)**

A step therapy exception shall be granted by a health benefit plan if the prescribing provider's submitted justification and supporting clinical documentation, if needed, is completed and determined to support such provider's statement that:

- The required prescription drug is contraindicated or will cause an adverse reaction or physical or mental harm to the patient;
- The required prescription drug is expected to be ineffective based on the known clinical condition of the patient and the known characteristics of the prescription drug regimen;
- The patient has tried the required prescription drug or another prescription drug in the same pharmacological class or with the same mechanism of action as the required drug while on their current or immediately preceding health plan and such drug was discontinued due to lack of efficacy, diminished effect, or an adverse event; or
- The patient is currently receiving a positive therapeutic outcome on a prescription drug for the medical condition under consideration if, while on their current or immediately preceding health plan, the patient received coverage for the prescription drug and the practitioner gives documentation in accordance with this subsection that the change in prescription drug required by the step therapy protocol is expected to be ineffective or cause harm to the patient based on the known characteristics of the patient and the known characteristics of the required prescription drug.

Drug samples shall not be considered trial and failure of a preferred prescription drug in lieu of trying the step therapy required prescription drug. This Code section shall not be construed to prevent:

- A health benefit plan from requiring a patient to try an AB-rated generic equivalent prior to providing coverage for the equivalent-branded prescription drug

- A health benefit plan from requiring a patient to try an interchangeable biological product prior to providing coverage for the biological products

**b. Terminal Condition, GA15-1507096 O.C.G.A §33-24-59.18 (effective 7/1/2015)**

No health benefit plan shall restrict coverage for treatment of a terminal condition when such treatment has been prescribed by a physician as medically appropriate and such treatment has been agreed to by an insured patient or by a person to whom the insured patient has legally delegated such authority or to whom otherwise has the legal authority to consent on behalf of the insured patient. The health benefit plan shall not refuse to pay or otherwise reimburse for the treatment diagnosed under this subsection, including any drug or device, so long as such end of life care is consistent with best practices for the treatment of the terminal condition and such treatment is supported by peer reviewed medical literature.

'Terminal condition' means any disease, illness, or health condition that a Physician has diagnosed as expected to result in death in 24 months or less.

**c. Step Therapy Exception for Metastatic Cancer, GA Code §33-24-59.20 (effective 1/1/20)**

No health benefit plan issued, delivered, or renewed in this state that, as a provision of hospital, medical, or surgical services, directly or indirectly covers the treatment of stage four advanced, metastatic cancer shall limit or exclude coverage for a drug approved by the United States Food and Drug Administration by mandating that the insured shall first be required to fail to successfully respond to a different drug or drugs or prove a history of failure of such drug or drugs; provided, however, that the use of such drug or drugs is consistent with best practices for the treatment of stage four advanced, metastatic cancer and is supported by peer reviewed medical literature. Other mandate provisions define "health benefit plan" and "stage four advanced, metastatic cancer."

**5. Illinois:**

**a. Step Therapy Exception IL16-3027525 215 ILCS 134/45.1 (effective 1/1/2018)**

A step therapy requirement exception request shall be approved if:

- the required prescription drug is contraindicated;
- the patient has tried the required prescription drug while under the patient's current or previous health insurance or health benefit plan and the prescribing provider submits evidence of failure or intolerance; or
- the patient is stable on a prescription drug selected by his or her health care provider for the medical condition under consideration while on a current or previous health insurance or

health benefit plan.

**b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer** IL18-9299149  
215 ILCS 5/356z.29 (effective 1/1/2019)

No individual or group policy of accident and health insurance amended, issued, delivered, or renewed in this State after the effective date of this amendatory Act of the 100th General Assembly that, as a provision of hospital, medical, or surgical services, directly or indirectly covers the treatment of stage 4 advanced, metastatic cancer shall limit or exclude coverage for a drug approved by the United States Food and Drug Administration by mandating that the insured shall first be required to fail to successfully respond to a different drug or prove history of failure of the drug as long as the use of the drug is consistent with best practices for the treatment of stage 4 advanced, metastatic cancer and is supported by peer-reviewed medical literature

**c. Zero Dollar Cost Share for Medically Necessary Abortifacients, Hormone Therapy for Gender Dysphoria and PrEP/PEP** IL23-23712618 EI, ILCS 5/356z.60 (effective 1/1/2024)

- An individual or group policy of accident and health insurance amended, delivered, issued, or renewed in this State on or after January 1, 2024 shall provide coverage for all abortifacients, hormonal therapy medication, human immunodeficiency virus pre-exposure prophylaxis, and post-exposure prophylaxis drugs approved by the United States Food and Drug Administration, and follow-up services related to that coverage, including, but not limited to, management of side effects, medication self-management or adherence counseling, risk reduction strategies, and mental health counseling. This coverage shall include drugs approved by the United States Food and Drug Administration that are prescribed or ordered for off-label use for the purposes described in this Section.
- The coverage required under subsection (b) is subject to the following conditions:
  - If the United States Food and Drug Administration has approved one or more therapeutic equivalent versions of an abortifacient drug, a policy is not required to include all such therapeutic equivalent versions in its formulary so long as at least one is included and covered without cost sharing and in accordance with this Section.
  - If an individual's attending provider recommends a particular drug approved by the United States Food and Drug Administration based on a determination of medical necessity with respect to that individual, the plan or issuer must defer to the determination of the attending provider and must cover that service or item without cost sharing.
  - If a drug is not covered, plans and issuers must have an easily accessible, transparent, and sufficiently expedient process that is not unduly burdensome on the individual or a provider or other individual acting as a patient's authorized representative to ensure coverage without cost sharing.

The conditions listed under this subsection (c) also apply to drugs prescribed for off-label use as abortifacients.

## **6. Iowa**

### **a. Step Therapy Exception, IA17-4402010 Iowa code 514F.7 (effective 1/1/2025)**

A step therapy override exception shall be approved by a health carrier, health benefit plan, or utilization review organization if any of the following circumstances apply:

(1) The prescription drug required under the step therapy protocol is contraindicated pursuant to the drug manufacturer's prescribing information for the drug or, due to a documented adverse event with a previous use or a documented medical condition, including a comorbid condition, is likely to do any of the following:

- a. Cause an adverse reaction to a covered person.
- b. Decrease the ability of a covered person to achieve or maintain reasonable functional ability in performing daily activities.
- c. Cause physical or mental harm to a covered person.

(2) The prescription drug required under the step therapy protocol is expected to be ineffective based on the known clinical characteristics of the covered person, such as the covered person's adherence to or compliance with the covered person's individual plan of care, and any of the following:

- d. The known characteristics of the prescription drug regimen as described in peer-reviewed literature or in the manufacturer's prescribing information for the drug.
- e. The health care professional's medical judgment based on clinical practice guidelines or peer-reviewed journals.
- f. The covered person's documented experience with the prescription drug regimen.

(3) The covered person has had a trial of a therapeutically equivalent dose of the prescription drug under the step therapy protocol while under the covered person's current or previous health benefit plan for a period of time to allow for a positive treatment outcome, and such prescription drug was discontinued by the covered person's health care professional due to lack of effectiveness.

(4) The covered person is currently receiving a positive therapeutic outcome on a prescription drug selected by the covered person's health care professional for the medical condition under consideration while under the covered person's current or previous health benefit plan.

Upon approval of a step therapy override exception, the health carrier, health benefit plan, or utilization review organization shall authorize coverage for the prescription drug selected by the covered person's prescribing health care professional if the prescription drug is a covered prescription drug under the covered person's health benefit plan.

This section shall not be construed to prevent a health carrier, health benefit plan, or utilization review organization from requiring a covered person to try a prescription drug with the same generic name and demonstrated bioavailability or a biological product that is an interchangeable biological product.

## **7. Louisiana:**

### **a. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer LA19-13246769 El La. R.S. 22:1053 (effective 6/5/2019)**

No health coverage plan shall use step therapy or fail first protocols as the basis to restrict any prescription benefit for the treatment of stage-four advanced, metastatic cancer or associated conditions if at least one of the following criteria is met:

- The prescribed drug or drug regimen has the United States Food and Drug Administration approved indication.
- The prescribed drug or drug regimen has the National Comprehensive Cancer Network Drugs and Biologic Compendium indication.
- The prescribed drug or drug regimen is supported by peer-reviewed, evidenced-based medical literature.

The provisions this Section shall not apply if the preferred drug or drug regimen is considered clinically equivalent for therapy, contains the identical active ingredient or

ingredients, and is proven to have the same efficacy. For purposes of this Subsection, different salts proven to have the same efficacy shall not be considered as different active ingredients.

**b. Exception for Cancer Treatment Targeting A Specific Genetic Mutation, LA 2022000 S 146 EI La. Stat. 22:§1054.1 (A) (effective 8/1/22)**

No health coverage plan delivered or issued for delivery in this state shall deny coverage for the treatment of metastatic or unresectable tumors or other advanced cancers with a medically necessary drug prescribed by a physician on the sole basis that the drug is not indicated for the specific tumor type or location in the body of the patient's cancer if the drug is approved by the United States Food and Drug Administration for the treatment of the specific mutation in a different type of cancer. Insurers shall not consider the treatment experimental or outside of their policy scope if the United States Food and Drug Administration has approved the drug for the treatment of cancer with the specific genetic mutation, even if in a different tumor type. This coverage may be denied only if an alternative treatment has proven to be more effective in published randomized clinical trials and is not contraindicated in the patient.

**c. Step Therapy Exception, LA23-23428057, LA24-26000720 <R.S. 22:1053> (effective 1/1/2021, amended 8/1/2023, 8/1/2024)**

An override of such the restriction shall be expeditiously granted by the insurer under health coverage plan if the prescribing practitioner, using sound clinical evidence, can demonstrate any of the following circumstances:

- The prescribing physician can demonstrate to the health coverage plan, based on sound clinical evidence, that the preferred treatment required under the step therapy or fail first protocol has been ineffective in the treatment of the insured's patient's disease or medical condition. The prescribing practitioner shall demonstrate to the health coverage plan that the patient has tried the required prescription drug while under his current or a previous health insurance or health coverage plan, or another prescription drug in the same pharmacologic class or with the same mechanism of action, and the prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event.
- The prescribing physician can demonstrate to the health coverage plan, based on sound clinical evidence, that the preferred treatment required under the step therapy or fail first protocol is reasonably expected to be ineffective based on the known relevant physical or mental characteristics and medical history of the insured patient and known characteristics of the drug regimen.
- The prescribing physician can demonstrate to the health coverage plan, based on sound clinical evidence, that the preferred treatment required under the step therapy or fail first protocol is contraindicated or will likely cause an adverse reaction or other physical or mental harm to the insured patient.

- The patient is currently receiving a positive therapeutic outcome on a prescription drug for the medical condition under consideration if, while on his current health coverage plan or the immediately preceding health coverage plan, the patient received coverage for the prescription drug.
- The required prescription drug is not in the best interest of the patient based on medical necessity as evidenced by valid documentation submitted by the prescriber.
- The required prescription drug for postpartum depression under the step therapy or fail first protocol is not indicated by the United States Food and Drug Administration for postpartum depression on the prescription drug's approved labeling.
- The provisions of this Section shall not be construed to prohibit the substitution of an AB-rated generic equivalent, biosimilar, or interchangeable biological product as designated by the federal Food and Drug Administration

**d. Off-Label Use Exception, R.S. 22:1060.8 (effective 1/1/23)**

No health coverage plan delivered or issued for delivery in this state shall limit or exclude coverage involving a minor for a drug on the basis that the drug is prescribed for a use that is different from the use for which that drug has been approved by the United States Food and Drug Administration and all of the following apply:

- The drug has been approved by the United States Food and Drug Administration.
- The drug is prescribed by a licensed healthcare provider for the treatment of a life threatening, chronic, or seriously debilitating disease or condition in a minor and the drug has been approved by the United States Food and Drug Administration for the same condition or disease in an adult and the drug is medically necessary to treat the disease or condition.
- The drug has been recognized for the treatment of the disease or condition in pediatric application by one of the following:
  - o The American Hospital Formulary Service Drug Information
  - o The United States Pharmacopeia Dispensing Information, Volume 1, "Drug Information for the Health Care Professional"
  - o Recognized in two articles from major peer-reviewed medical journals that present data supporting the proposed off-label use or uses as generally safe and effective unless there is clear and convincing contradictory evidence presented in a major peer-reviewed journal.

**e. Cancer Prior Authorization Requirements LA23-23518873 R.S. 22:1060.14 (effective 1/1/2024)**

No health coverage plan that is renewed, delivered, or issued for delivery in this state that provides coverage for cancer in accordance with the Louisiana Insurance Code shall deny a request for prior authorization or the payment of a claim for any procedure, pharmaceutical,

or diagnostic test typically covered under the plan to be provided or performed for the diagnosis and treatment of cancer if the procedure, pharmaceutical, or diagnostic test is recommended by nationally recognized clinical practice guidelines for use in the diagnosis or treatment for the insureds particular type of cancer and clinical state.

**f. Step Therapy Exception for Menopause and Perimenopause, LA 2024000 H 392 R.S. 22:988 (effective 8/1/2024)**

A health insurance issuer offering health coverage plans in this state shall provide coverage for any medically necessary care or treatment for menopause and perimenopause.

A health insurance issuer shall not require a prior authorization or otherwise be subject to a step-therapy or fail-first policy or protocol for the administration or prescription of any medication administered or prescribed for hormone replacement therapy used to treat symptoms of menopause and perimenopause

**g. Urinary and Sexual Dysfunction for Cancer Patients, LA 2024000 H 508 (effective 7/1/2025)**

Health benefit plans shall not deny coverage for drugs used to treat urinary and sexual dysfunction as chosen by the patient diagnosed with cancer in consultation with the attending physician. Treatment procedures to be performed following a diagnosis of cancer shall be made solely by the patient in consultation with attending physicians. All levels of medical and surgical treatment found medically necessary shall not be excluded

**8. Maryland:**

**a. Step Therapy Exception MD 23-23313747, MD INS Code Ann. §15-141 (effective 1/1/2024)**

An entity subject to this section may not impose a Step Therapy or Fail - First Protocol on an insured or enrollee if:

- The Step Therapy Drug has not been approved by the U.S. Food and Drug Administration for the medical condition being treated; or
- A prescriber provides supporting medical information to the entity that a prescription drug covered by the entity:
  - Was ordered by a prescriber for the insured or enrollee within the past 180 days; and
  - Based on the professional judgment of the prescriber, was effective in treating the insured's or enrollee's disease or medical condition.

A step therapy exception request shall be granted if, based on the professional judgment of the prescriber and any information and documentation required when:

- The step therapy drug is contraindicated or will likely cause an adverse reaction to the insured or enrollee;
- The step therapy drug is expected to be ineffective based on the known clinical characteristics of the insured or enrollee and the known characteristics of the prescription drug regimen;
- The insured or enrollee is stable on a prescription drug prescribed for the medical condition under consideration while covered under the policy or contract of the entity or under a previous source of coverage; or
- While covered under the policy or contract of the entity or a previous source of coverage, the insured or enrollee has tried a prescription drug that:
  - o Is in the same pharmacologic class or has the same mechanism of action as the step therapy drug; and
  - o Was discontinued by the prescriber due to lack of efficacy or effectiveness, diminished effect, or an adverse event.

This subsection may not be construed to prevent:

- An entity subject to this section from requiring an insured or enrollee to try an AB-rated generic equivalent or interchangeable biologic product before providing coverage for the equivalent branded prescription drug; OR
- A health care provider from prescribing a prescription drug that is determined to be medically inappropriate; or
  - o Require an entity subject to this section to provide coverage for a prescription drug that is not covered by a policy or contract of the entity

**b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer, MD17-4512688**  
MD INS Code §15-142 (effective 10/1/2017)

An entity subject to this section may not impose a step therapy or fail-first protocol on an insured or an enrollee for a prescription drug approved by the U.S. Food and Drug Administration if:

- The prescription drug is used to treat the insured's or enrollee's stage four advanced metastatic cancer; and
- Use of the prescription drug is:
  - o Consistent with the U.S. Food and Drug Administration-approved indication or
  - o The National Comprehensive Cancer Network Drugs & Biologics Compendium

Indication for the treatment of stage four advanced metastatic cancer; and

- o Supported by peer-reviewed medical literature.

## **9. Mississippi:**

### **a. Step Therapy Exception, MS 83-9-36 (effective 1/1/2012)**

An override of that restriction shall be expeditiously granted by the insurer under the following circumstances:

- The prescribing practitioner can demonstrate, based on sound clinical evidence, that the preferred treatment required under step therapy or fail-first protocol has been ineffective in the treatment of the insured's disease or medical condition; or
- Based on sound clinical evidence or medical and scientific evidence:
  - o The prescribing practitioner can demonstrate that the preferred treatment required under the step therapy or fail-first protocol is expected or likely to be ineffective based on the known relevant physical or mental characteristics of the insured and known characteristics of the drug regimen; or
  - o The prescribing practitioner can demonstrate that the preferred treatment required under the step therapy or fail-first protocol will cause or will likely cause an adverse reaction or other physical harm to the insured.
- The duration of any step therapy or fail-first protocol shall not be longer than a period of thirty (30) days when the treatment is deemed clinically ineffective by the prescribing practitioner. When the prescribing practitioner can demonstrate, through sound clinical evidence, that the originally prescribed medication is likely to require more than thirty (30) days to provide any relief or an amelioration to the insured, the step therapy or fail-first protocol may be extended up to seven (7) additional days.

### **b. Terminal Condition, § 83-9-22**

Health coverage plans prohibited from restricting coverage for medically appropriate treatment prescribed by physician based on insured's diagnosis with terminal condition.;

(1); (a) Notwithstanding any other provision of the law to the contrary, no health coverage plan shall restrict coverage for medically appropriate treatment prescribed by a physician and agreed to by a fully informed insured, or if the insured lacks legal capacity to consent by a person who has legal authority to consent on his or her behalf, based on an insured's diagnosis with a terminal condition. Refusing to pay for treatment rendered to an insured near the end of life that is consistent with best practices for treatment of a disease or condition, approved uses of a drug or device, or uses supported by peer reviewed medical literature, is a per se violation of this section;

(b) Violations of this section shall constitute an unfair trade practice and subject the violator to the penalties provided by law;

(c) As used in this section “terminal condition” means any aggressive malignancy, chronic end-stage cardiovascular or cerebral vascular disease, or any other disease, illness or condition which a physician diagnoses as terminal;

(d) As used in this section, a “health coverage plan” shall mean any hospital, health or medical expense insurance policy, hospital or medical service contract, employee welfare benefit plan, contract or agreement with a health maintenance organization or a preferred provider organization, health and accident insurance policy, or any other insurance contract of this type, including a group insurance plan and the State Health and Life Insurance Plan.;

(2); (a) Notwithstanding any other provision of the law to the contrary, no health benefit paid directly or indirectly with state funds, specifically Medicaid, shall restrict coverage for medically appropriate treatment prescribed by a physician and agreed to by a fully informed individual, or if the individual lacks legal capacity to consent by a person who has legal authority to consent on his or her behalf, based on an individual’s diagnosis with a terminal condition.;

(b) Refusing to pay for treatment rendered to an individual near the end of life that is consistent with best practices for treatment of a disease or condition, approved uses of a drug or device, or uses supported by peer reviewed medical literature, is a per se violation of this section;

(c) As used in this section “terminal condition” means any aggressive malignancy, chronic end-stage cardiovascular or cerebral vascular disease, or any other disease, illness or condition which a physician diagnoses as terminal.

**c. Step Therapy Exception for Advanced, Metastatic Cancer and Associated Conditions** MS § 83-9-36, HB 2143 (effective 8/1/2024)

A health benefit plan that provides coverage for advanced, metastatic cancer and associated conditions may not require, before the health benefit plan provides coverage of a prescription drug approved by the United States Food and Drug Administration, that the enrollee:

(a) Fail to successfully respond to a different drug; or

(b) Prove a history of failure of a different drug.

This section applies only to a drug the use of which is:

(a) Consistent with best practices for the treatment of advanced, metastatic cancer or an associated condition.

(b) Supported by peer-reviewed, evidence-based literature; and

(c) Approved by the United States Food and Drug Administration.

An override of that restriction shall be expeditiously granted by the insurer under the following circumstances:

(a) The prescribing practitioner can demonstrate, based on sound clinical evidence, that the preferred treatment required under step therapy or fail-first protocol has been ineffective in the treatment of the insured's disease or medical condition; or

(b) Based on sound clinical evidence or medical and scientific evidence:

(i) The prescribing practitioner can demonstrate that the preferred treatment required under the step therapy or fail-first protocol is expected or likely to be ineffective based on the known relevant physical or mental characteristics of the insured and known characteristics of the drug regimen; or

(ii) The prescribing practitioner can demonstrate that the preferred treatment required under the step therapy or fail-first protocol will cause or will likely cause an adverse reaction or other physical harm to the insured.

“Associated conditions” means the symptoms or side effects associated with advanced, metastatic cancer or its treatment and which, in the judgment of the health care practitioner, further jeopardizes the health of a patient if left untreated.

“Advanced, metastatic cancer” means cancer that has spread from the primary or original site of the cancer to nearby tissues, lymph nodes, or other areas or parts of the body.

## **10. Missouri:**

### **a. Step Therapy Exception, MO§ 376.2034 (effective 7/1/2012)**

A step therapy override exception determination shall be granted if the patient has tried the step therapy required prescription drugs while under his or her current or previous health insurance or health benefit plan, and such prescription drugs were discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event, or if the patient's treating health care provider attests that coverage of the prescribed prescription drug is necessary to save the life of the patient. Pharmacy drug samples shall not be considered trial and failure of a preferred prescription drug in lieu of trying the step therapy required prescription drug.

- Upon the granting of a step therapy override exception request, the health carrier, health benefit plan, or utilization review organization shall authorize dispensation of and coverage for the prescription drug prescribed by the patient's treating health care provider, provided such drug is a covered drug under such policy or contract.

- This section shall not be construed to prevent:

- o A health carrier, health benefit plan, or utilization review organization from requiring

a patient to try a generic equivalent or other brand name drug prior to providing coverage for the requested prescription drug; or

o A health care provider from prescribing a prescription drug he or she determines is medically appropriate.

## **11. Nebraska**

### **a. Step Therapy Exception NE21-17473952 NE Rev ST §44-7,115 (effective 1/1/2025)**

A step-therapy override exception shall be approved if any of the following circumstances apply:

- The prescription drug required under the step-therapy protocol is contraindicated pursuant to the drug manufacturer's prescribing information for the drug or, due to a documented adverse event with a previous use or a documented medical condition, including a comorbid condition, is likely to do any of the following:
  - o Cause an adverse reaction to the covered individual;
  - o Decrease the ability of the covered individual to achieve or maintain reasonable functional ability in performing daily activities; or
  - o Cause physical or mental harm to the covered individual;
- The prescription drug required under the step-therapy protocol is expected to be ineffective based on the known clinical characteristics of the covered person, such as the covered person's adherence to or compliance with the covered person's individual plan of care, and any of the following:
  - o The known characteristics of the prescription drug regimen as described in peer-reviewed literature or in the manufacturer's prescribing information for the drug;
  - o The health care provider's medical judgment based on clinical practice guidelines or peer-reviewed journals; or
  - o The covered person's documented experience with the prescription drug regimen;
- The covered person has had a trial of a therapeutically equivalent dose of the prescription drug under the step-therapy protocol while under the covered person's current or previous health benefit plan for a period of time to allow for a positive treatment outcome, and such prescription drug was discontinued by the covered person's health care provider due to lack of effectiveness; or
- The covered person is currently receiving a positive therapeutic outcome on a prescription drug selected by the covered person's health care provider for the medical condition under consideration while under the covered person's current or previous health benefit plan. Nothing in the Step-Therapy Reform Act shall prohibit the distribution of a pharmaceutical sample, except that the pharmaceutical sample may not be used to meet the requirements of this subdivision.

This section shall not be construed to prevent a health carrier or utilization review organization from requiring a covered person to try a prescription drug with the same

generic name and demonstrated bioavailability or a biological product that is an interchangeable biological product pursuant to the Nebraska Drug Product Selection Act prior to providing coverage for the equivalent branded prescription drug.

## **12. New Mexico**

### **a. Step Therapy Exception, N.M. § 59A-46-52.2 (effective 1/1/24)**

A carrier shall expeditiously grant an exception to the health maintenance organization contract's step therapy protocol, based on medical necessity and a clinically valid explanation from the patient's prescribing practitioner as to why a drug on the health maintenance organization contract's formulary that is therapeutically equivalent to the prescribed drug should not be substituted for the prescribed drug, if:

- The prescription drug that is the subject of the exception request is contraindicated or will likely cause an adverse reaction by or physical or mental harm to the patient;
- The prescription drug that is the subject of the exception request is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;
- While under the enrollee's current health maintenance organization contract, or under the enrollee's previous health coverage, the enrollee has tried the prescription drug that is the subject of the exception request or another prescription drug in the same pharmacologic class or with the same mechanism of action as the prescription drug that is the subject of the exception request and that prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect or an adverse event; or
- The prescription drug required pursuant to the step therapy protocol is not in the best interest of the patient, based on clinical appropriateness, because the patient's use of the prescription drug is expected to:
  - Cause a significant barrier to the patient's adherence to or compliance with the patient's plan of care;
  - Worsen a comorbid condition of the patient; or
  - Decrease the patient's ability to achieve or maintain reasonable functional ability in performing daily activities.

Upon the granting of an exception to a group health plan's step therapy protocol, the group health plan administrator shall authorize continuing coverage for the prescription drug that is the subject of the exception request for no less than the duration of the therapeutic effect of the drug. The group health plan shall include in its evidence of coverage language describing an enrollee's rights pursuant to this subsection.

The provisions of this section shall not be construed to prevent a health maintenance organization contract from requiring a patient to try a biosimilar, interchangeable biologic or

generic equivalent of a prescription drug before providing coverage for the equivalent brand-name prescription drug. The provisions of this section shall not be construed to prevent a health maintenance organization contract from requiring a patient to try a generic equivalent of a prescription drug before providing coverage for the equivalent brand-name prescription drug.

**b. Medically Necessary Treatment of Autoimmune Disorder, Cancer, Rare Disease and Substance Use Disorder, NM24-25727768 NM INS Code §59A-22B-8 (effective 7/1/2025)**

Coverage for medication approved by the federal food and drug administration that is prescribed for the treatment of an autoimmune disorder, cancer, rare disease or condition or a substance use disorder, pursuant to a medical necessity determination made by a health care professional from the same or similar practice specialty that typically manages the medical condition, procedure or treatment under review, shall not be subject to prior authorization, except in cases in which a biosimilar, interchangeable biologic or generic version is available.

A health insurer shall not impose step therapy requirements before authorizing coverage for medication approved by the federal food and drug administration that is prescribed for the treatment of an autoimmune disorder, cancer or a substance use disorder, pursuant to a medical necessity determination, except in cases in which a biosimilar, interchangeable biologic or generic version is available.

A health insurer shall not impose step therapy requirements before authorizing coverage for an off-label medication that is prescribed for the treatment of a rare disease or condition, pursuant to a medical necessity determination made by a health care professional from the same or similar practice specialty that typically manages the medical condition, procedure or treatment under review, except in cases in which a biosimilar, interchangeable biologic or generic version is available.

"Rare disease or condition" means a disease or condition that affects fewer than two hundred thousand people in the United States.

**13. North Carolina**

**a. Step Therapy Exception NC20- 16056997 CS EI, Statute § 58-3-221 (effective 1/1/2024)**

An insurer shall grant an exception request if the prescribing provider's submitted justification and supporting clinical documentation are sufficient to demonstrate any of the following:

- The enrollee has tried the alternate drug or drugs while covered by the current or the

previous health benefit plan.

- The formulary or alternate drug or drugs has been ineffective in the treatment of the enrollee's disease or condition.
- The formulary or alternate drug or drugs causes or is reasonably expected by the prescribing provider to cause a harmful or adverse clinical reaction in the enrollee.
- Either (i) the drug is prescribed in accordance with any applicable clinical protocol of the insurer for the prescribing of the drug or (ii) the drug has been approved as an exception to the clinical protocol pursuant to the insurer's exception procedure.
- The enrollee's prescribing provider certifies in writing that the enrollee has previously used an alternative nonrestricted access drug or device and the alternative drug or device has been detrimental to the enrollee's health or has been ineffective in treating the same condition and, in the opinion of the prescribing health care provider, is likely to be detrimental to the enrollee's health or ineffective in treating the condition again.

Pharmaceutical drug samples or patient incentive programs, including coupons or debit cards, shall not be considered trial and failure of a preferred prescription drug in lieu of trying the formulary preferred prescription drug.

Nothing in this section requires an insurer to pay for drugs or devices or classes of drugs or devices related to a benefit that is specifically excluded from coverage by the insurer.

This section shall not be construed to prevent the health benefit plan from requiring an enrollee to try an A-rated generic equivalent drug, or a biosimilar, as defined under 42 U.S.C. § 262(i)(2), prior to providing coverage for the equivalent branded prescription drug.

#### **14. Ohio:**

##### **a. Step Therapy Exception, OH 3901.832 (effective 1/1/20)**

Pursuant to a step therapy exemption request or an appeal, a health plan issuer or utilization review organization shall grant a step therapy exemption if any of the following are met:

- The required prescription drug is contraindicated for that specific patient, pursuant to the drug's United States food and drug administration prescribing information.
- The patient has tried the required prescription drug while under their current, or a previous, health benefit plan, or another United States food and drug administration approved AB-rated prescription drug, and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event.
- The patient is stable on a prescription drug selected by the patient's health care provider for the medical condition under consideration, regardless of whether or not the drug was

prescribed when the patient was covered under the current or a previous health benefit plan, or has already gone through a step therapy protocol. However, a health benefit plan may require a stable patient to try a pharmaceutical alternative, per the federal food and drug administration's orange book, purple book, or their successors, prior to providing coverage for the prescribed drug.

**b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer, OH21-16933950, ORC § 3902.51 (effective 3/24/2021)**

A health benefit plan issued, delivered, or renewed in Ohio on or after 3/24/2021 that directly or indirectly covers the treatment of stage four advanced metastatic cancer is prohibited from making coverage of a drug that is prescribed to treat such cancer or associated conditions dependent upon a covered person demonstrating either of the following:

- Failure to successfully respond to a different drug;
- A history of failing to respond to a different drug or drugs.

This prohibition applies only to uses of such drug or drugs that are consistent with either of the following:

- An indication approved by, or described in, as applicable, either of the following for the treatment of stage four advanced metastatic cancer:
  - o The United States Food and Drug Administration;
  - o The National Comprehensive Cancer Network drugs and biologics compendium.
- The best practices for the treatment of stage four advanced metastatic cancer, as supported by peer-reviewed medical literature.

A violation of this prohibition is an unfair and deceptive practice in the business of insurance.

**15. Oklahoma:**

**a. Step Therapy Exception, OK19-12431543 OK Stat. §63-7310 (effective 1/1/2020)**

A health insurance plan shall grant a requested step therapy exception if the submitted justification of the prescribing provider and supporting clinical documentation, if needed, is completed and supports the statement of the provider that:

- The required prescription drug is contraindicated or will likely cause an adverse reaction or physical or mental harm to the patient,
- The required prescription drug is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug,
- The patient has tried the required prescription drug while under the patient's current or a

previous health insurance plan and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect or an adverse event,

- The required prescription drug is not in the best interest of the patient, based on medical necessity, or
- The patient is stable on a prescription drug selected by the patient's healthcare provider for the medical condition under consideration while on the patient's current or a previous health insurance plan

Nothing in this section shall be construed to authorize the use of a pharmaceutical sample for the sole purpose of meeting the requirements for a step therapy exception

**b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer, H-2748, OK23-2329415 (effective 11/1/23)**

A health benefit plan that provides coverage for advanced metastatic cancer and associated conditions may not require, before providing coverage of an FDA-approved prescription drug, that the enrollee: (1) fails to successfully respond to a different drug; or (2) proves a history of failure of a different drug. This prohibition applies only to a drug, the use of which is: (1) consistent with best practices for the treatment of advanced metastatic cancer or an associated condition; (2) supported by peer-reviewed, evidence-based literature; and (3) approved by the FDA.

**16. Tennessee:**

**a. Step Therapy Exception, Tenn. Code § 56-7-3502 (effective 1/1/23)**

A health carrier, health benefit plan, or utilization review organization shall grant a step therapy exception if one (1) of the following applies:

- The required prescription drug is contraindicated or will likely cause an adverse reaction to, or physical or mental harm to, the patient due to a documented adverse event with a previous use of the required prescription drug or a documented medical condition, including a comorbid condition;
- The required prescription drug is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;
  - o The required prescription drug is not in the best interest of the patient, based on clinical appropriateness, because the patient's use of the drug is expected to:
    - o Cause a significant barrier to the patient's adherence to or compliance with the patient's plan of care;
    - o Worsen a comorbid condition of the patient; or
    - o Decrease the patient's ability to achieve or maintain reasonable functional ability in performing daily activities; or
- The patient is currently receiving a positive therapeutic outcome on a prescription drug

selected by the patient's healthcare provider for the medical condition under consideration while on a current or previous health insurance or health benefit plan, and the patient's healthcare provider gives documentation to the health insurance, health benefit plan, or utilization review organization that the change in prescription drug required by the step therapy protocol is expected to be ineffective or cause harm to the patient based on the known characteristics of the specific enrollee and the known characteristics of the required prescription drug.

This section does not prevent a health carrier, health benefit plan, or utilization review organization from requiring a patient to try an AB-rated generic equivalent product, interchangeable biological product, or biosimilar product prior to providing coverage for the equivalent branded prescription drug.

The use of pharmaceutical samples of a required prescription drug is not considered a trial of the required prescription drug as part of a step therapy protocol.

#### **17. Texas:**

##### **a. Step Therapy Exception, TX17-4501604 Tex. Ins. Code §1369.0546 (effective 1/1/2018)**

A health benefit plan issuer shall grant a written request if the request includes the prescribing provider's written statement, with supporting documentation, stating that:

- The drug required under the step therapy protocol:
  - o Is contraindicated;
  - o Will likely cause an adverse reaction in or physical or mental harm to the patient; or
  - o Is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;
- The patient previously discontinued taking the drug required under the step therapy protocol, or another prescription drug in the same pharmacologic class or with the same mechanism of action as the required drug, while under the health benefit plan currently in force or while covered under another health benefit plan because the drug was not effective or had a diminished effect or because of an adverse event;
- The drug required under the step therapy protocol is not in the best interest of the patient, based on clinical appropriateness, because the patient's use of the drug is expected to:
  - o Cause a significant barrier to the patient's adherence to or compliance with the patient's plan of care;
  - o Worsen a comorbid condition of the patient; or
  - o Decrease the patient's ability to achieve or maintain reasonable functional ability in performing daily activities; or
- The drug that is subject to the step therapy protocol was prescribed for the patient's condition;
- The patient:
  - o Received benefits for the drug under the health benefit plan currently in force or a

previous health benefit plan; and

- o Is stable on the drug; and
- o The change in the patient's prescription drug regimen required by the step therapy protocol is expected to be ineffective or cause harm to the patient based on the known clinical characteristics of the patient and the known characteristics of the required prescription drug regimen

**b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer**, TX19-13305672  
Tex. Ins. Code §1369.213 (effective 1/1/2020)

A health benefit plan that provides coverage for stage-four advanced, metastatic cancer and associated conditions may not require, before the health benefit plan provides coverage of a prescription drug approved by the United States Food and Drug Administration (FDA), that the enrollee:

- Fail to successfully respond to a different drug; or
- Prove a history of failure of a different drug.

This section applies only to a drug the use of which is:

- Consistent with best practices for the treatment of stage-four advanced, metastatic cancer or an associated condition;
- Supported by peer-reviewed, evidence-based literature; and
- Approved by the United States Food and Drug Administration.

**c. Step Therapy Exception for Serious Mental Illness** TX23-23491650 §1369.0547  
(effective 1/1/2024)

This section applies only to a drug prescribed to an enrollee who is 18 years of age or older to treat a diagnosis of a serious mental illness. A health benefit plan that provides coverage for prescription drugs to treat a serious mental illness may not require, before the health benefit plan provides coverage of a prescription drug approved by the United States Food and Drug Administration, that the enrollee:

- fail to successfully respond to more than one different drug for each drug prescribed, excluding the generic or pharmaceutical equivalent of the prescribed drug; or
- prove a history of failure of more than one different drug for each drug prescribed, excluding the generic or pharmaceutical equivalent of the prescribed drug.

Subject to Section 1369.0546, a health benefit plan issuer may implement a step therapy protocol to require a trial of a generic or pharmaceutical equivalent of a prescribed prescription drug as a condition of continued coverage of the prescribed drug only:

- once in a plan year; and

- if the generic or pharmaceutical equivalent drug is added to the plan's drug formulary.

## **18. Virginia:**

### **a. Continuity of Care for Treatment of a Mental Disorder, VA21-17387330 VA code §38.2-3407.15:2 (effective 7/1/2021)**

Any provider contract between a carrier and a participating health care provider with prescriptive authority, or its contracting agent, shall contain specific provisions that:

- Require that when any carrier has previously approved prior authorization for any drug prescribed for the treatment of a mental disorder listed in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders published by the American Psychiatric Association, no additional prior authorization shall be required by the carrier, provided that (i) the drug is a covered benefit; (ii) the prescription does not exceed the FDA-labeled dosages; (iii) the prescription has been continuously issued for no fewer than three months; and (iv) the prescriber performs an annual review of the patient to evaluate the drug's continued efficacy, changes in the patient's health status, and potential contraindications. Nothing in this subdivision shall prohibit a carrier from requiring prior authorization for any drug that is not listed on its prescription drug formulary at the time the initial prescription for the drug is issued.

### **b. Step Therapy Exception, VA19-11741564 VA code §38.2-3407.9:05 (effective 1/1/2020)**

A step therapy exception request shall be granted if the prescribing provider's submitted justification and supporting clinical documentation, if needed, are determined to support the prescribing provider's statement that:

- The required prescription drug is contraindicated;
- The required drug would be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;
- The patient has tried the step therapy-required prescription drug while under their current or a previous health benefit plan, and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event; or
- The patient is currently receiving a positive therapeutic outcome on a prescription drug recommended by his provider for the medical condition under consideration while on a current or the immediately preceding health benefit plan.

Drug samples shall not be considered trial and failure of a preferred drug.

This section shall not be construed to prevent a carrier or utilization review organization from requiring an enrollee to try an AB-rate generic equivalent or interchangeable biological product prior to providing coverage or substitute a generic for a branded drug.

**c. Non-Formulary Exception Process, VA Code Ann. § 38.2-3407.9:01 (effective 8/1/2024)**

If an insurer, corporation, or health maintenance organization maintains one or more closed drug formularies, each insurer, corporation, or health maintenance organization shall:

Establish a process to allow an enrollee to obtain, without additional cost-sharing beyond that provided for formulary prescription drugs in the enrollee's covered benefits, a specific, medically necessary nonformulary prescription drug when the enrollee has been receiving the specific nonformulary prescription drug for at least six months previous to the development or revision of the formulary and the prescribing physician has determined that the formulary drug is an inappropriate therapy for the specific patient or that changing drug therapy presents a significant health risk to the specific patient. After reasonable investigation and consultation with the prescribing physician, the insurer, corporation or health maintenance organization shall act on such requests within one business day of receipt of the request. For purposes of this subsection, substituting the generic equivalent drug, which has been approved by the U.S. Food and Drug Administration, for a branded version of such drug shall not constitute a change in drug therapy.

**19. Washington**

**a. Non-Formulary and Step Therapy Exception, WA19-12810894 48.43 RCW (effective 1/1/2021)**

An exception request must be granted if the health carrier or prescription drug utilization management entity determines that the evidence submitted by the provider or patient is sufficient to establish that:

- The required prescription drug is contraindicated or will likely cause a clinically predictable adverse reaction by the patient;
- The required prescription drug is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;
- The patient has tried the required prescription drug or another prescription drug in the same pharmacologic class or a drug with the same mechanism of action while under his or her current or a previous health plan, and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event;
- The patient is currently experiencing a positive therapeutic outcome on a prescription

drug recommended by the patient's provider for the medical condition under consideration while on his or her current or immediately preceding health plan, and changing to the required prescription drug may cause clinically predictable adverse reactions, or physical or mental harm to, the patient; or

- The required prescription drug is not in the best interest of the patient, based on documentation of medical appropriateness, because the patient's use of the prescription drug is expected to:
  - a. Create a barrier to the patient's adherence to or compliance with the patient's plan of care;
  - b. Negatively impact a comorbid condition of the patient;
  - c. Cause a clinically predictable negative drug interaction; or
  - d. Decrease the patient's ability to achieve or maintain reasonable functional ability in performing daily activities
- This section does not prevent:
  - a. A health carrier or prescription drug utilization management entity from requiring a patient to try an AB-rated generic equivalent or a biological product that is an interchangeable biological product prior to providing coverage for the equivalent branded prescription drug;
  - b. A health carrier or prescription drug utilization management entity from denying an exception for a drug that has been removed from the market due to safety concerns from the federal food and drug administration; or
  - c. A health care provider from prescribing a prescription drug that is determined to be medically appropriate

**b. Continuity of Care, WA21-16859749 WAC 284-43-2021 (effective 1/1/2021)**

A carrier must not require the enrollee to submit a new exception request for a refill if the enrollee's prescribing physician or other prescriber continues to prescribe the drug and the drug continues to be approved by the U.S. Food and Drug Administration for treating the enrollee's disease or medical condition, or if the drug was prescribed as part of the enrollee's participation in a clinical trial.

- If the substituted drug is for an off-label drug use, a carrier may require the enrollee to submit a new exception request when a prescription fill and renewal cycle ends.
- A carrier may require an enrollee to try an AB-rated generic equivalent or a biological product that is an interchangeable biological product prior to providing coverage for the equivalent branded prescription drug.
- A carrier must consider exception requests for a U.S. Food and Drug Administration approved drug used for purposes other than what is indicated on the official label if the use is medically acceptable. A carrier must take into consideration major drug compendia, authoritative medical literature, and accepted standards of practice when making its decision.

## 20. Wisconsin

### a. **Step Therapy Exception**, WI19-13419928 El Wis. Stat. § 632.866 (effective 1/1/2020)

An insurer, pharmacy benefit manager, or utilization review organization shall grant an exception to the step therapy protocol if the prescribing provider submits complete, clinically relevant written documentation supporting a step therapy exception request and any of the following are satisfied:

- The prescription drug required under the step therapy protocol is contraindicated or, due to a documented adverse event with a previous use or a documented medical condition, including a comorbid condition, is likely to do any of the following:
  - o Cause a serious adverse reaction in the patient.
  - o Decrease the ability to achieve or maintain reasonable functional ability in performing daily activities.
  - o Cause physical or psychiatric harm to the patient.
- The prescription drug required under the step therapy protocol is expected to be ineffective based on all of the following:
  - o Sound clinical evidence or medical and scientific evidence.
  - o The known clinical characteristics of the patient.
  - o The known characteristics of the prescription drug regimen as described in peer-reviewed literature or the manufacturer's prescribing information for the prescription drug.
- The patient has tried the prescription drug required under the step therapy protocol, or another prescription drug in the same pharmacologic class or with the same mechanism of action, under the policy or plan or a previous policy or plan, the patient was adherent to the prescription drug regimen for a time that allows for a positive treatment outcome, and the patient's use of the prescription drug was discontinued by the patient's provider due to lack of efficacy or effectiveness, diminished effect, or adverse event. This subdivision does not prohibit an insurer, pharmacy benefit manager, or utilization review organization from requiring a patient to try another drug in the same pharmacologic class or with the same mechanism of action if that therapy sequence is supported by clinical review criteria
- The patient is stable on a prescription drug selected by his or her health care provider for the medical condition under consideration while covered under the policy or plan or a previous policy or plan.
- Nothing in this subsection shall be construed to allow the use of a pharmaceutical sample to satisfy a criterion for an exception to a step therapy protocol.

Nothing in this subsection shall be construed to prevent any of the following: 1. An insurer, pharmacy benefit manager, or utilization review organization from requiring a patient to try an A-rated generic equivalent prescription drug, as designated by the federal Food and Drug

administration, or a biosimilar, as defined under 42 USC 262 (i) (2), before providing coverage for the equivalent brand name prescription drug

**Additional Clinical Rules:**

- Applicable clinical programs will apply
- Step therapy bypass does NOT apply to FDA approved labeling requirements

**21. Wyoming**

**a. Step Therapy Exception WY24-25727770E W.S. 26-55-1111 (effective 1/1/2025)**

No enrollee shall be required to repeat a step therapy protocol if that enrollee, while under their current or a previous health benefit plan, used the prescription drug required by the step therapy protocol, or another prescription drug in the same pharmacologic class with a similar efficacy and side effect profile or with the same mechanism of action, and discontinued use due to lack of efficacy, effectiveness, an adverse event or contraindication. The enrollee's prescribing provider shall submit justification and clinical information, if requested, that demonstrates a clinically valid reason for why the covered prescribed drug is needed and documentation of completion of previous step therapy protocols for the prescribed drug.

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

Asenapine (generic Saphris) is an atypical antipsychotic indicated for the treatment of Schizophrenia in adults; and Bipolar I disorder as acute monotherapy treatment of manic or mixed episodes in adults and pediatric patients 10 to 17 years of age, adjunctive treatment to lithium or valproate in adults, and maintenance monotherapy treatment in adults. [1,2]

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try generic atypical antipsychotic alternative(s) prior to receiving coverage for asenapine (generic Saphris).

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

|---------------------------------------------|--------------|
| <b>Product Name:</b> generic tafluprost [a] |              |
| <b>Approval Length</b>                      | 12 month(s)  |
| <b>Guideline Type</b>                       | Step Therapy |

### Approval Criteria

1 - History of failure, contraindication, or intolerance to one of the following:

- latanoprost (generic Xalatan)
- travoprost (generic Travatan Z)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Tafluprost (generic Zioptan) is an ophthalmic prostaglandin analog therapy for the treatment of open-angle glaucoma/ocular hypertension.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try one alternative Glaucoma Agent – latanoprost (generic Xalatan) or travoprost (generic Travatan Z) – prior to receiving coverage for tafluprost (generic Zioptan).

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Zileuton extended-release is a leukotriene modifier indicated for the prophylaxis and chronic treatment of asthma in adults and children 12 years of age and older.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try one of two alternative leukotriene modifiers - montelukast tablets or chewable (generic Singulair) or zafirlukast (generic Accolate) - prior to receiving coverage for zileuton extended-release (generic Zyflo CR).

#### Additional Clinical Rules:

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Epinastine (generic Elestat) is an ophthalmic anti-allergy agent indicated for the treatment of itching of the eye associated with allergic conjunctivitis.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try one alternative ophthalmic anti-allergy alternative – azelastine (generic Optivar) – prior to receiving coverage for epinastine (generic Elestat).

#### Additional Clinical Programs:

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Supply limits may also be in place.

## 2 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Ramelteon (generic Rozerem) is a sedative hypnotic agent indicated for the treatment of sleep-onset insomnia. Belsomra (suvorexant) is a sedative hypnotic agent indicated for treatment of both sleep-onset and sleep-maintenance insomnia.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try alternative sedative hypnotic agents prior to receiving coverage for Ramelteon (generic Rozerem) or Belsomra (suvorexant).

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

Fetzima (levomilnacipran) is a serotonin norepinephrine reuptake inhibitor [SNRI] indicated for major depressive disorder [MDD].

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a trial of at least three generic formulary medications before providing coverage for Fetzima.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may also be in place.

## 2 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                       |                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <p><b>Background:</b></p> <p>Topical steroids are commonly prescribed for the treatment of rash, eczema, and dermatitis. Topical steroids have anti-inflammatory properties, and are classified into different potency classes based on their vasoconstriction abilities. A vasoconstriction bioassay provides potency measurements that correlate with clinical potency. There are numerous topical steroid products.</p> |                             |
| Class 1: Super Potent                                                                                                                                                                                                                                                                                                                                                                                                      | Class 5: Lower Mid-Strength |
| Class 2: Potent                                                                                                                                                                                                                                                                                                                                                                                                            | Class 6: Mild               |
| Class 3: Upper Mid-Strength                                                                                                                                                                                                                                                                                                                                                                                                | Class 7: Least Potent       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

| Notes                                                                                                      | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

## Benefit/Coverage/Program Information

### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### Background:

Stivarga (regorafenib) is a kinase inhibitor indicated for the treatment of patients with metastatic colorectal cancer (CRC) who have been previously treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy, an anti-VEGF therapy, and, if RAS wild type, an anti-EGFR therapy; locally advanced, unresectable or metastatic gastrointestinal stromal tumor (GIST) who have been previously treated with imatinib mesylate (generic Gleevec) and sunitinib malate (generic Sutent); hepatocellular carcinoma (HCC) who have been previously treated with sorafenib tosylate (generic Nexavar). [1]

The National Cancer Comprehensive Network (NCCN) also recommends additional use of Stivarga in colon cancer, rectal cancer, soft tissue sarcoma, hepatocellular carcinoma, biliary tract cancer, bone cancer, gastrointestinal stromal tumor (GIST), and glioblastoma. [2]

| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of perinatal/infantile or juvenile-onset hypophosphatasia based on ALL of the following:</b></p> <p><b>1.1 ONE of the following:</b></p> <ul style="list-style-type: none"> <li>Onset of clinical signs and symptoms of hypophosphatasia prior to age 18 years (e.g., respiratory insufficiency, vitamin B6 responsive seizures, hypotonia, failure to thrive, delayed walking, waddling gait, dental abnormalities, low trauma fractures)</li> <li>Radiographic evidence supporting the diagnosis of hypophosphatasia at the age of onset prior to age 18 years (e.g., craniosynostosis, infantile rickets, non-traumatic fractures)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2 ONE of the following:</b></p> <p><b>1.2.1 BOTH of the following:</b></p> <ul style="list-style-type: none"> <li>Patient has low level activity of serum alkaline phosphatase (ALP) evidenced by an ALP level below the age and gender-adjusted normal range</li> <li>Patient has an elevated level of tissue non-specific alkaline phosphatase (TNSALP) substrate (e.g., serum pyridoxal 5'-phosphate [PLP] level, serum or urine phosphoethanolamine [PEA] level, urinary inorganic pyrophosphate [PPi level])</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2.2 Confirmation of tissue-nonspecific alkaline phosphatase (TNSALP) gene mutation by ALPL genomic DNA testing*</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Prescribed by ONE of the following:</b></p> <ul style="list-style-type: none"> <li>Endocrinologist</li> <li>A specialist experienced in the treatment of metabolic bone disorders</li> </ul> |                     |

**AND**

**3** - ONE of the following:

**3.1** BOTH of the following:

- Diagnosis of perinatal/infantile-onset hypophosphatasia
- Request does not exceed a maximum supply limit of 9 mg/kg/week

**OR**

**3.2** BOTH of the following:

- Diagnosis of juvenile-onset hypophosphatasia
- Request does not exceed a maximum supply limit of 6 mg/kg/week

**AND**

**4** - ONE of the following:

**4.1** Patient is prescribed Strensiq 18 mg/0.45 mL, Strensiq 28 mg/0.7 mL, or Strensiq 40 mg/mL vials

**OR**

**4.2** Both of the following:

- Patient is prescribed Strensiq 80 mg/0.8 mL vial
- Patient's weight is greater than or equal to 40 kg

Notes

\*Results of prior genetic testing can be submitted as confirmation of diagnosis of HPP, however please note that the provider should confirm coverage status of any new genetic testing under the patient's United Healthcare plan prior to ordering.  
[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Documentation of positive clinical response to Strensiq therapy (e.g., improvement in clinical symptoms, improvement in Radiographic Global Impression of Change) [3,4]</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Clinically relevant decrease from baseline in tissue non-specific alkaline phosphatase (TNSALP) substrate (e.g., serum pyridoxal 5'-phosphate [PLP] level, serum or urine phosphoethanolamine [PEA] level, urinary inorganic pyrophosphate [PPi level])</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - Prescribed by ONE of the following:</p> <ul style="list-style-type: none"> <li>• Endocrinologist</li> <li>• A specialist experienced in the treatment of metabolic bone diseases</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>4</b> - ONE of the following:</p> <p><b>4.1</b> BOTH of the following:</p> <ul style="list-style-type: none"> <li>• Diagnosis of perinatal/infantile-onset hypophosphatasia</li> <li>• Request does not exceed a maximum supply limit of 9 mg/kg/week</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p><b>4.2</b> BOTH of the following:</p> |                     |

- Diagnosis of juvenile-onset hypophosphatasia
- Request does not exceed a maximum supply limit of 6 mg/kg/week

**AND**

**5 - ONE of the following:**

**5.1** Patient is prescribed Strensiq 18 mg/0.45 mL, Strensiq 28 mg/0.7 mL, or Strensiq 40 mg/mL vials

**OR**

**5.2 BOTH of the following:**

- Patient is prescribed Strensiq 80 mg/0.8 mL vials
- Patient's weight is greater than or equal to 40 kg

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Strensiq is a tissue nonspecific alkaline phosphatase indicated for the treatment of patients with perinatal/infantile and juvenile-onset hypophosphatasia (HPP). [1]

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Guideline Type                                                 | Prior Authorization |

## Approval Criteria

1 - Diagnosis of ONE of the following\*:

- Onchocerciasis due to nematode parasite
- Pediculosis
- Strongyloidiasis
- Ascariasis
- Scabies (including crusted scabies)
- Cutaneous larva migrans (hook worm disease)
- Enterobiasis
- Filariasis
- Trichuriasis
- Gnathostomiasis

### Notes

\*Requests for COVID treatment and/or prophylaxis are to be denied. [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Stromectol (ivermectin) is indicated for the treatment of parasitic infections including strongyloidiasis and onchocerciasis. It may also be used for other compendia supported parasitic infections including but not limited to scabies, hookworm disease, and ascariasis. Most infections are treated with a single weight-based dose.

#### Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

| Guideline Type  | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of moderate to severe short ragweed pollen-induced allergic rhinitis defined by symptoms severe enough to interfere with quality of life (e.g., sleep disturbances; impairment of daily, sport, or leisure activities; impairment of school or work performance)

**AND**

**2** - Diagnosis confirmed by ONE of the following:

- Positive skin test to short ragweed pollen
- in vitro testing for pollen-specific IgE antibodies for short ragweed pollen

**AND**

**3** - Treatment is started or will be started at least 12 weeks before the beginning of the short ragweed pollen season

**AND**

**4** - History of failure, contraindication, or intolerance to TWO of the following:

- oral antihistamine [e.g. cetirizine (Zyrtec)]
- intranasal antihistamine [e.g. azelastine (Astelin)]
- intranasal corticosteroid [e.g. fluticasone (Flonase)]
- leukotriene inhibitor [e.g. montelukast (Singulair)]

**AND**

**5** - Patient does not have unstable and/or uncontrolled asthma

**AND**

**6** - Prescribed by or in consultation with a specialist in allergy and immunology

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

The sublingual immunotherapy (SLIT) medications are indicated for patients who have symptoms of allergic rhinitis with natural exposure to allergens and who demonstrate specific IgE antibodies to the relevant allergen. Grastek (Timothy grass pollen allergen extract) and Oralair (Sweet Vernal, Orchard, Perennial Rye, Timothy, and Kentucky Blue Grass Mixed Pollens allergen extract) are indicated for patients with grass pollen-induced allergic rhinitis, Ragwitek (short ragweed pollen allergen extract) is indicated for ragweed pollen-induced allergic rhinitis and Odactra (*Dermatophagoides farinae*/*Dermatophagoides pteronyssinus* allergen extract), is indicated for house dust mite (HDM)-induced allergic rhinitis.

Candidates for allergen immunotherapy are patients whose symptoms are not adequately controlled by medications, and avoidance measures have been ineffective. In addition, patients experiencing unacceptable adverse effects of medications or who wish to reduce the long-term use of medications may also be candidates for immunotherapy.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits and/or Notification may be in place.

|                           |                     |
|---------------------------|---------------------|
| Product Name: Sucraid [a] |                     |
| Approval Length           | 12 month(s)         |
| Therapy Stage             | Reauthorization     |
| Guideline Type            | Prior Authorization |

### Approval Criteria

1 - Documentation of positive clinical response Sucraid therapy [e.g., reduced symptoms (e.g., abdominal pain, bloating, gas, vomiting), reduced number of stools per day, reduced number of symptomatic days]

**AND**

2 - Prescribed by or in consultation with a gastroenterologist or rare disease specialist

**AND**

3 - Will be used with a sucrose-free, low starch diet

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Sucraid (sacrosidase) is an oral enzyme replacement therapy indicated for the treatment of sucrase deficiency, which is part of congenital sucrase-isomaltase deficiency (CSID). The effects of Sucraid have not been evaluated in patients with secondary (acquired) sucrase deficiency.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

- Supply limits may be in place.

| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 12 month(s)             |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Initial Authorization   |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Prior Authorization     |
| <b>Approval Criteria</b><br><br><b>1</b> - Diagnosis of obstructive sleep apnea defined by ONE of the following:<br><br><b>1.1</b> Fifteen or more obstructive respiratory events per hour of sleep confirmed by a sleep study (unless the prescriber provides justification confirming that a sleep study would not be feasible)<br><br><p style="text-align: center;"><b>OR</b></p> <b>1.2</b> BOTH of the following:<br><br><b>1.2.1</b> Five or more obstructive respiratory events per hour of sleep confirmed by a sleep study (unless the prescriber provides justification confirming that a sleep study would not be feasible)<br><br><p style="text-align: center;"><b>AND</b></p> |                         |

**1.2.2** One or more of the following sign/symptoms are present:

- Daytime sleepiness
- Nonrestorative sleep
- Fatigue
- Insomnia
- Waking up with breath holding, gasping, or choking
- Habitual snoring noted by bed partner or other observer
- Observed apnea

**AND**

**2** - BOTH of the following:

**2.1** Standard treatments for the underlying airway obstruction (e.g., continuous positive airway pressure [CPAP], bi-level positive airway pressure [BiPAP]) have been used for one month or longer

**AND**

**2.2** Patient is fully compliant with ongoing treatment(s) for the underlying airway obstruction

**AND**

**3** - History of failure, contraindication, or intolerance to ONE of the following:

- armodafinil (generic Nuvigil)
- modafinil (generic Provigil)

| <p><b>Background:</b></p> <p>Sunosi is a dopamine and norepinephrine reuptake inhibitor (DNRI) indicated to improve wakefulness in adult patients with excessive daytime sleepiness associated with narcolepsy or obstructive sleep apnea (OSA).</p> <p>Limitations of Use: Sunosi is not indicated to treat the underlying airway obstruction in OSA. Ensure that the underlying airway obstruction is treated (e.g., with continuous positive airway pressure (CPAP)) for at least one month prior to initiating Sunosi for excessive daytime sleepiness. Modalities to treat the underlying airway obstruction should be continued during treatment with Sunosi. Sunosi is not a substitute for these modalities.</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes</li> </ul> |

(ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Sutent (sunitinib malate)</b>                                                                                                                                                                                  |
| <b>Gastrointestinal stromal tumor (GIST)</b> Indicated for the treatment of gastrointestinal stromal tumor (GIST) after disease progression on or intolerance to Gleevec (imatinib mesylate).                                |
| <b>Renal cell carcinoma (RCC)</b> Indicated for the treatment of advanced renal cell carcinoma (RCC).                                                                                                                        |
| <b>Recurrent RCC</b> Indicated for the treatment of adjuvant treatment of adult patients at high risk of recurrent RCC following nephrectomy.                                                                                |
| <b>Pancreatic neuroendocrine tumors (pNET)</b> Indicated for the treatment of progressive, well-differentiated pancreatic neuroendocrine tumors (pNET) in patients with unresectable locally advanced or metastatic disease. |
| <b>Off Label Uses: Other Uses:</b> The National Cancer Comprehensive Network (NCCN)                                                                                                                                          |

recommends use of Sutent for medullary, follicular, oncocytic, or papillary thyroid carcinoma; chordoma; meningiomas; thymic carcinoma; and treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. NCCN also approves the use of Sutent for other soft tissue sarcomas: alveolar soft part sarcoma (ASPS), angiosarcoma, solitary fibrous tumor/ hemangiopericytoma, and extraskeletal myxoid chondrosarcoma.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                          |
