Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

| Benefit/Coverage/Program Information |
|--------------------------------------|
| Background:                          |

Fasenra (benralizumab) is an interleukin-5 receptor alpha-directed cytolytic monoclonal antibody indicated for the add-on maintenance treatment of patients with severe asthma aged 6 years and older, and with an eosinophilic phenotype; and for the treatment of adult patients with eosinophilic granulomatosis with polyangiitis (EGPA).

Fasenra is not used for treatment of other eosinophilic conditions or for relief of acute bronchospasm or status asthmaticus. [1]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.
- The prefilled syringe is typically covered under the medical benefit. Please refer to the United Healthcare Medical Benefit Drug Policy: “Respiratory Interleukins (Cinqair®, Fasenra®, and Nucala®)”.

## 1 . Indications

**Drug Name:** Fentanyl citrate lozenge, Fentora (fentanyl buccal tablet), fentanyl buccal tablet (authorized generic of Fentora)

**Breakthrough cancer pain** Indicated for the management of breakthrough cancer pain in patients who are already receiving and have developed tolerance to around-the-clock opioid therapy for their underlying persistent cancer pain.

## 2 . Criteria

Product Name:Fentanyl citrate lozenge, Brand Fentora, fentanyl buccal tablet (AG of Fentora)

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records demonstrating ALL of the following:</p> <p><b>1.1</b> Use is for the management of breakthrough pain associated with a cancer diagnosis (cancer diagnosis must be documented in the medical record).</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Patient must have at least a ONE week history of ONE of the following medications to demonstrate tolerance to opioids:</p> <ul style="list-style-type: none"> <li>• Morphine sulfate at a dose of greater than or equal to 60 mg/day</li> <li>• Fentanyl transdermal patch at a dose of greater than or equal to 25 mcg/hr</li> <li>• Oral oxycodone at a dose of greater than or equal to 30 mg/day</li> <li>• Oral hydromorphone at a dose of greater than or equal to 8 mg/day</li> <li>• Oral oxymorphone at a dose of greater than or equal to 25 mg/day</li> <li>• Oral hydrocodone at a dose of greater than or equal to 60 mg/day</li> <li>• An alternative opioid at an equianalgesic dose (e.g., oral methadone greater than or equal to 20 mg/day)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3</b> The patient is currently taking a long-acting opioid around the clock for cancer pain.</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.4</b> ONE of the following:</p> <ul style="list-style-type: none"> <li>• The patient is not concurrently receiving an alternative transmucosal fentanyl product.</li> <li>• The patient is currently receiving an alternative transmucosal fentanyl product AND the prescriber is requesting the termination of all current authorizations for alternative transmucosal fentanyl products in order to begin treatment with the requested medication. Only one transmucosal fentanyl product will be approved at a time. If previous authorizations cannot be terminated, the PA request will be denied.</li> </ul> |                     |

**OR**

**2** - The patient is currently taking fentanyl citrate lozenge, Fentora, or fentanyl buccal tablet (AG of Fentora) and does not meet the prior authorization criteria requirements based on the FDA-approved indication for breakthrough cancer pain (a one-time fill may be approved for transition to an alternative treatment).

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Fentanyl citrate lozenge, Fentora, and fentanyl buccal tablet (authorized generic of Fentora) are rapid-acting opioid analgesics indicated for the management of breakthrough cancer pain in patients who are already receiving and have developed tolerance to around-the-clock opioid therapy for their underlying persistent cancer pain. Patients considered opioid tolerant are those who are taking at least 60 mg of oral morphine daily, at least 25 mcg/hour of transdermal fentanyl, at least 30 mg of oxycodone daily, at least 8 mg of oral hydromorphone daily, at least 25 mg of oral oxymorphone daily or an equianalgesic dose of another opioid for a week or longer. Patients must remain on around-the-clock opioids while taking a rapid-acting fentanyl product. Fentanyl citrate lozenge, Fentora, and fentanyl buccal tablet (generic Fentora) must not be used in opioid non-tolerant patients because life-threatening hypoventilation could occur at any dose in patients not on a chronic regimen of opiates.

##### Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

| <b>Drug Name: Filsuvez (birch triterpenes)</b>                                                                                                                                                |
| <b>Epidermolysis bullosa</b> Indicated for the treatment of wounds associated with dystrophic and junctional epidermolysis bullosa in adult and pediatric patients 6 months of age and older. |

## 2 . Criteria

|                                   |                       |
|-----------------------------------|-----------------------|
| <b>Product Name:</b> Filsuvez [a] |                       |
| Approval Length                   | 12 month(s)           |
| Therapy Stage                     | Initial Authorization |
| Guideline Type                    | Non Formulary         |

**Approval Criteria**

**1** - Patient is at least 6 months of age and older

**AND**

**2** - ONE of the following diagnoses:

- Dystrophic epidermolysis bullosa (DEB)
- Junctional epidermolysis bullosa (JEB)

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values) confirming a genetic mutation associated with DEB or JEB (i.e., COL7A1, LAMA3, LAMB3, LAMC2, COL17A1, ITGA6, ITGB4, ITGA3)

**AND**

**4** - Patient has at least one partial thickness wound that meets ALL of the following criteria:

- 10-50 cm<sup>2</sup> in size
- Present for at least 3 weeks
- Adequate granulation tissue
- Excellent vascularization
- No evidence of active wound infection
- No evidence or history of basal or squamous cell carcinomas (SCC)

**AND**

**5** - Prescribed by, or in consultation with, a dermatologist with expertise in the treatment of epidermolysis bullosa (EB)

**AND**

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**6** - Patient is NOT receiving Filsuvez in combination with Vyjuvek (beremagene geperpavec-svdt) on the same wound(s)

|       |                                                                                                                                                                                                                  |

### Approval Criteria

**1** - Documentation of positive clinical response to Filsuvez therapy (e.g., complete wound closure, reduction in wound size, decrease in procedural pain, less frequent dressing changes, decreased total body wound burden)

**AND**

**2** - Wound(s) being treated meet all of the following criteria:

- Adequate granulation tissue
- Excellent vascularization
- No evidence of active wound infection
- No evidence or history of basal or squamous cell carcinomas (SCC)

**AND**

**3** - Filsuvez is prescribed by, or in consultation with, a dermatologist with expertise in the treatment of epidermolysis bullosa (EB)

**AND**

**4** - Patient is NOT receiving Filsuvez in combination with Vyjuvek (beremagene geperpavec-svdt) on the same wound(s)

|       |                                                                                                                                                                                                                  |

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

The body produces two types of gonadotropins, follicle-stimulating hormone (FSH) and luteinizing hormone (LH), both of which play a role in fertility and human reproduction. After they are produced by the pituitary gland, gonadotropins trigger production of other sex hormones which then promote production of egg and sperm. Gonadotropins are used in the treatment of infertility, a disease of the reproductive system defined as one of the following:

- inability to achieve a successful pregnancy due to an individual's medical, sexual, or reproductive history;
- failure to achieve a pregnancy after 12 months or more of regular unprotected sexual intercourse when the female partner is less than 35 years;
- failure to achieve a pregnancy after 6 months or more of regular unprotected sexual intercourse when the female partner is 35 years or older

Follistim AQ (follitropin beta) is indicated for induction of ovulation and pregnancy in anovulatory infertile women in whom the cause of infertility is functional and not due to primary ovarian failure. It is also indicated for pregnancy in normal ovulatory women undergoing controlled ovarian stimulation as part of an in vitro fertilization (IVF) or intracytoplasmic sperm injection (ICSI) cycle. In males, Follistim AQ is indicated for induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism (HH) in whom the cause of infertility is not due to primary testicular failure.

Gonal-f, Gonal-f RFF and Gonal-f RFF Redi-Ject (follitropin alfa) are indicated for the induction of ovulation and pregnancy in oligo-anovulatory infertile women in whom the cause of infertility is functional and not due to primary ovarian failure. Gonal-f, Gonal-f RFF, and Gonal-f RFF Redi-ject are also indicated for the development of multiple follicles in ovulatory women participating in an Assisted Reproductive Technology (ART) program. Gonal-f is indicated for the induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism for whom the cause of infertility is not due to primary testicular failure.

The clinically appropriate dosing for FSH agents is 450 IU/day or less when used for an ART cycle, or 225 IU/day or less when used for ovulation induction or controlled ovarian

stimulation, for not more than 14 days of treatment. Exceeding this daily dose and duration of treatment has not been proven to be efficacious in terms of pregnancy outcome.

**Additional Clinical Programs:**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

### Approval Criteria

1 - ONE of the following:

- Diagnosis of chronic heart failure
- Diagnosis of chronic kidney disease (CKD)

**AND**

2 - Submission of medical records confirming that the patient is established on background loop diuretic therapy (e.g., bumetanide, furosemide, torsemide) for the treatment of edema

**AND**

3 - BOTH of the following:

- Patient does not require ongoing emergency care or hospitalization
- Patient is currently a candidate for parenteral diuresis outside of the hospital

**AND**

4 - Furoscix is prescribed by or in consultation with ONE of the following:

- Cardiologist
- Nephrologist

| <b>Drug Name: Gilotrif (afatinib)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p><b>Non-Small Cell Lung Cancer (NSCLC)</b> Indicated for the first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have non-resistant epidermal growth factor receptor (EGFR) mutations as detected by an FDA-approved test. Gilotrif is also indicated for the treatment of patients with metastatic, squamous NSCLC progressing after platinum-based chemotherapy.</p> <p><b>NCCN Recommended</b> The National Cancer Comprehensive Network (NCCN) also recommends the use of Gilotrif in patients with advanced non-nasopharyngeal head and neck cancers with progression on or after platinum-containing chemotherapy. Additionally, the NCCN also recommends use of Gilotrif as a single-agent treatment for brain metastases in patients with EGFR sensitizing mutation positive NSCLC.</p> |

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                  |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Gilotrif® (afatinib) is a kinase inhibitor indicated for the first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have non-resistant epidermal growth factor receptor (EGFR) mutations as detected by an FDA-approved test. Gilotrif is also indicated for the treatment of patients with metastatic, squamous NSCLC progressing after platinum-based chemotherapy. [1] The National Cancer Comprehensive Network (NCCN) also recommends the use of Gilotrif in patients with advanced non-nasopharyngeal head and neck cancers with progression on or after platinum-containing chemotherapy. Additionally, the NCCN also recommends use of Gilotrif as a single-agent treatment for brain metastases in patients with EGFR sensitizing mutation positive NSCLC. [2]

*Limitations of Use:* Safety and efficacy of Gilotrif were not established in patients whose tumors have resistant EGFR mutations.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Mounjaro (tirzepatide), Rybelsus (semaglutide), Byetta (exenatide)</b>                                                                                                                                                                                                                                                                                        |
| <b>Type 2 Diabetes Mellitus</b> Indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.                                                                                                                                                                                                                           |
| <b>Drug Name: Bydureon BCise (exenatide extended-release)</b>                                                                                                                                                                                                                                                                                                               |
| <b>Type 2 Diabetes Mellitus</b> Indicated as an adjunct to diet and exercise to improve glycemic control in patients 10 years of age and older with type 2 diabetes mellitus.                                                                                                                                                                                               |
| <b>Drug Name: Trulicity (dulaglutide), and Victoza (liraglutide)</b>                                                                                                                                                                                                                                                                                                        |
| <b>Reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke)</b> Indicated to reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke) in adults with type 2 diabetes mellitus and established cardiovascular disease. |

**Type 2 Diabetes Mellitus** Indicated as an adjunct to diet and exercise to improve glycemic control in patients 10 years of age and older with type 2 diabetes mellitus.

**Drug Name: Ozempic (semaglutide)**

**Reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke)** Indicated to reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke) in adults with type 2 diabetes mellitus and established cardiovascular disease.

**Type 2 Diabetes Mellitus** Indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

**Reduce the risk of sustained eGFR decline, end-stage kidney disease, and cardiovascular death** Indicated to reduce the risk of sustained eGFR decline, end-stage kidney disease, and cardiovascular death in adults with type 2 diabetes mellitus and chronic kidney disease.

## 2 . Criteria

Product Name:Byetta, Bydureon BCise, Exenatide (authorized generic of Byetta), Mounjaro, Ozempic, Rybelsus, Trulicity, Victoza\* [a]

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

### Approval Criteria

1 - Submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus as evidenced by ONE of the following laboratory values

- A1C greater than or equal to 6.5%
- Fasting plasma glucose (FPG) greater than or equal to 126 mg/dL
- 2-hour plasma glucose (PG) greater than or equal to 200 mg/dL during oral glucose tolerance test
- Random plasma glucose greater than or equal to 200 mg/dL in patient with classic symptoms of hyperglycemia or hyperglycemic crisis

**OR**

**2** - For patients requiring ongoing treatment for type 2 diabetes mellitus (i.e., diagnosed greater than 2 years ago), submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus

**Notes**

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

\*Medications used for the purposes of weight loss are typically excluded from benefit coverage. Coverage is determined by the member's prescription drug benefit plan.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Byetta (exenatide), Ozempic (semaglutide) and Rybelsus (semaglutide) are indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus. Bydureon BCise (exenatide extended-release), Trulicity (dulaglutide) and Victoza (liraglutide) are indicated as an adjunct to diet and exercise to improve glycemic control in patients 10 years of age and older with type 2 diabetes mellitus. Ozempic, Trulicity, and Victoza are also indicated to reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke) in adults with type 2 diabetes mellitus and established cardiovascular disease. Finally, Ozempic carries an additional indication to reduce the risk of sustained eGFR decline, end-stage kidney disease, and cardiovascular death in adults with type 2 diabetes mellitus and chronic kidney disease.

Mounjaro (tirzepatide) is a glucose-dependent insulinotropic polypeptide (GIP) receptor and glucagon-like peptide-1 (GLP-1) receptor agonist indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

##### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis

codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

- Supply limits may be in place.

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Cetrotide (cetorelix acetate) and ganirelix acetate are synthetic decapeptides with gonadotropin-releasing hormone (GnRH) antagonist activity. These agents are indicated to inhibit premature luteinizing hormone (LH) surges in women undergoing controlled ovarian stimulation followed by insemination or assisted reproductive technology (ART).

#### Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

| <p><b>Pediatric growth hormone deficiency</b> Indicated for the treatment of pediatric patients with growth failure due to inadequate secretion of endogenous growth hormone</p> <p><b>Growth hormone deficiency (GHD)</b> Indicated for the treatment of growth hormone deficiency (GHD)</p> <p><b>Turner syndrome or Noonan syndrome</b> Indicated for short stature associated with Turner syndrome or Noonan syndrome</p> <p><b>Idiopathic short stature (ISS)</b> indicated for the treatment of idiopathic short stature (ISS)</p> <p><b>Short-stature homeobox (SHOX) gene deficiency</b> Indicated for short-stature or growth failure in short stature homeobox-containing gene homeobox (SHOX) gene deficiency</p> |

**Prader-Willi syndrome** Indicated for growth failure due to Prader-Willi syndrome.

**Short stature in children small for gestational age** Indicated for short stature in children born small for gestational age (SGA) with no catch-up growth by 2 years to 4 years of age

**Growth Failure associated with Chronic Renal Insufficiency** Indicated for growth failure in children with chronic renal insufficiency up to the time of transplant

**Replacement of endogenous growth hormone in adults** Indicated for replacement of endogenous growth hormone in adults with confirmed growth hormone deficiency.

**Drug Name: Ngenla (somatrogen)**

**Pediatric Growth Hormone Deficiency (GHD)** Indicated for treatment of pediatric patients aged 3 years and older who have growth failure due to inadequate secretion of endogenous GH.

**Drug Name: Skytrofa (lonapegsomatropin-tcgd)**

**Pediatric Growth Hormone Deficiency (GHD)** Indicated for the treatment of pediatric patients 1 year and older who weigh at least 11.5 kg and have growth failure due to inadequate secretion of endogenous growth hormone (GH).

**Drug Name: Sogroya (somapacitan)**

**Pediatric Growth Hormone Deficiency (GHD)** Indicated for the treatment of pediatric patients aged 2.5 years and older who have growth failure due to inadequate secretion of endogenous growth hormone.

**Adult Growth Hormone Deficiency** Indicated for the replacement of endogenous GH in adults with growth hormone deficiency (GHD).

**Drug Name: Serostim (somatropin)**

**Human Immunodeficiency Virus (HIV)-Associated Cachexia** Indicated for the treatment of HIV patients with wasting or cachexia to increase lean body mass and body weight and improve physical endurance.

**Drug Name: Zorbtive (somatropin)**

**Short Bowel Syndrome** Indicated for the treatment of short bowel syndrome in adult patients receiving specialized nutritional support.

**Drug Name: Increlex (mecasermin)**

**Severe primary insulin-like growth factor-1 (IGF-1) deficiency or growth hormone gene deletion** Indicated for the treatment of growth failure in pediatric patients 2 years of age and

older with severe primary insulin-like growth factor-1 (IGF-1) deficiency or with GH gene deletion who have developed neutralizing antibodies to GH.

## 2 . Criteria

Product Name:Somatropin\*\* [a] (Genotropin, Genotropin Miniquick, Humatrope, Norditropin, Norditropin Flexpro, Nutropin AQ NuSpin, Omnitrope, Saizen, Zomacton, Zorbtive, and Serostim)

|                 |                                            |
|-----------------|--------------------------------------------|
| Diagnosis       | Congenital Growth Hormone Deficiency (GHD) |
| Approval Length | 12 month(s)                                |
| Therapy Stage   | Initial Authorization                      |
| Guideline Type  | Prior Authorization                        |

### Approval Criteria

1 - Infant is less than 12 months of age

**AND**

2 - Submission of medical records documenting evidence of growth failure confirmed by ALL of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Documentation of length/height and weight for age and gender including percentile and/or standard deviation scores
- Calculated growth velocity

**AND**

3 - Submission of medical records documenting ONE of the following:

3.1 BOTH of the following:

- Hypothalamic-pituitary defect (e.g., ectopic posterior pituitary, empty sella, hypoplastic pituitary, major congenital malformation, optic nerve hypoplasia, tumor or irradiation)
- Deficiency of at least one additional pituitary hormone

**OR**

**3.2 ALL of the following:**

- Neonatal hypoglycemia and/or micropenis
- Serum GH concentration less than or equal to 5 µg/L in the first 28 days of life
- Deficiency of at least one additional pituitary hormone
- Classical imaging triad (i.e., ectopic posterior pituitary and pituitary hypoplasia with abnormal stalk)

**AND**

**4 -** Submission of medical records documenting ONE of the following is below the age and gender adjusted normal range as provided by the physician's lab:

- Insulin-like Growth Factor 1 (IGF-1/Somatomedin-C)
- Insulin Growth Factor Binding Protein-3 (IGFBP-3)

**AND**

**5 -** Prescribed by an endocrinologist

**AND**

**6 -** Request does not exceed a maximum supply limit of 0.3mg/kg/week

Notes

**\*\*Please Note:** The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, efficacy, safety, or long-term consequences of GH therapy in children with ISS who are otherwise healthy.  
[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

**AND**

**5** - Submission of medical records documenting BOTH of the following:

**5.1** Patient has undergone TWO of the following provocative GH stimulation tests:

- Arginine
- Clonidine
- Glucagon
- Insulin
- Levodopa

**AND**

**5.2** Peak GH responses to each agent is less than 10 mcg/L

**AND**

**6** - If patient has a history of malignancy, ONE of the following:

- Patient is in remission
- Patient has been stable for at least 12 months

**AND**

**7** - Prescribed by an endocrinologist

**AND**

**8** - ONE of the following:

**8.1** If the request is for Ngenla, request does not exceed a maximum supply limit of 0.66 mg/kg/week

**OR**

**8.2** If the request is for Somatropin, Skytrofa, or Sogroya, ONE of the following:

**8.2.1** Request does not exceed a maximum supply limit of 0.3 mg/kg/week

**OR**

**8.2.2** ALL of the following:

**8.2.2.1** ONE of the following:

- Poor catch-up growth while on standard dosing
- IGF-1 less than 2 standard deviations from the mean while on standard dosing

**AND**

**8.2.2.2** Tanner Stage 2 or greater

**AND**

**8.2.2.3** Request does not exceed a maximum supply limit of 0.7 mg/kg/week

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## **Approval Criteria**

**1** - Submission of medical records documenting ONE of the following:

**1.1** Genetic mutation

**OR**

**1.2** Deficiency of THREE of the following anterior pituitary hormones:

- ACTH
- TSH
- Prolactin
- FSH/LH

**OR**

**1.3** Irreversible structural hypothalamic-pituitary disease

**OR**

**1.4** Panhypopituitarism

**AND**

**2** - Submission of medical records documenting ONE of the following:

**2.1** IGF-1 level is below the age and gender adjusted normal range as provided by the physician's lab

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient has undergone ONE of the following GH stimulation tests after discontinuation of therapy for at least 1 month:

- Insulin tolerance test (ITT)
- GH-releasing hormone-arginine test (GHRH+ARG)
- Glucagon stimulation test (GST)
- Macimorelin

**AND**

**2.2.2** ONE of the following peak GH values:

- ITT less than or equal to 5.1 µg/L
- GHRH+ARG less than or equal to 11 µg/L
- Glucagon less than or equal to 3 µg/L
- Macimorelin less than or equal to 2.8 ng/mL

**AND**

**3** - Prescribed by an endocrinologist

**AND**

**4** - ONE of the following:

**4.1** Request does not exceed a maximum supply limit of 0.3mg/kg/week

**OR**

**4.2** ALL of the following:

**4.2.1** One of the following:

- Poor catch-up growth while on standard dosing
- IGF-1 less than 2 standard deviations from the mean while on standard dosing

**AND**

**4.2.2** Tanner Stage 2 or greater

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records documenting positive response to therapy (e.g., increase in total lean body mass, exercise capacity or IGF-1 and IGFBP-3 levels)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Prescribed by an endocrinologist</p> <p style="text-align: center;"><b>AND</b></p> |                                      |

**3 - ONE of the following:**

**3.1** Request does not exceed a maximum supply limit of 0.3mg/kg/week

**OR**

**3.2** ALL of the following:

**3.2.1** ONE of the following:

- Poor catch-up growth while on standard dosing
- IGF-1 less than 2 standard deviations from the mean while on standard dosing

**AND**

**3.2.2** Tanner Stage 2 or greater

**AND**

**3.2.3** Request does not exceed a maximum supply limit of 0.7 mg/kg/week

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Approval Criteria

1 - Submission of medical records documenting an IGF-1 level within the past 12 months

**AND**

2 - ONE of the following:

2.1 Diagnosis of panhypopituitarism

**OR**

2.2 Other diagnosis AND not used in combination with the following

- Aromatase inhibitors [e.g., Arimidex (anastrozole), Femara (letrozole)]
- Androgens [e.g., Delatestryl (testosterone enanthate), Depo-Testosterone (testosterone cypionate)]

**AND**

3 - Prescribed by an endocrinologist

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity
- Growth charts for length/height for age and gender

**AND**

**1.1.3** Submission of medical records documenting BOTH of the following:

- Expected adult height not attained
- Documentation of expected adult height goal

**OR**

**1.2** BOTH of the following:

- Patient is greater than or equal to 18 years of age
- Submission of medical records documenting a positive response to therapy (e.g., reduction in fat mass, increase in lean body mass, improved strength and exercise tolerance)

**OR**

**2** - Prescribed by an endocrinologist

**Approval Criteria**

**1 -** Submission of medical records documenting a height increase of at least 2 cm/year over the previous year confirmed by ALL of the following:

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity
- Growth chart for length/height for age and gender

**AND**

**2 -** Submission of medical records documenting BOTH of the following:

- Expected adult height not attained

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Diagnosis confirmed by the presence of clinical features consistent with Noonan Syndrome (e.g., distinct facial features such as high forehead, hypertelorism, down slanting palpebral fissures with high arched eyebrows, epicanthic folds, full upper lip with a depressed nasal bridge, low set ears, blue irises, ptosis and neck webbing, pulmonary valve stenosis, hypertrophic cardiomyopathy, pectus carinatum/excavatum, mild developmental delay, cryptorchidism, lymphatic dysplasia)

**AND**

**2** - Submission of medical records documenting ALL of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Documentation of length/height and weight for age and gender including percentile and/or standard deviation scores
- Calculated growth velocity

**AND**

**3** - Submission of medical records documenting open epiphyses in the last 12 months

**AND**

**4** - Submission of medical records documenting Tanner staging less than equal to 4

**AND**

**5** - Prescribed by an endocrinologist

Notes

**\*\*Please Note:** The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, efficacy, safety, or long-term consequences of GH therapy in children with ISS who are otherwise healthy.  
[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**1 - Submission of medical records documenting a height increase of at least 2 cm/year over the previous year confirmed by ALL of the following:**

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity
- Growth chart for height for age and gender

**AND**

**2 - Submission of medical records documenting BOTH of the following:**

- Expected adult height not attained
- Expected adult height goal

**AND**

**3 - Patient has not yet had a renal transplant**

**AND**

**4 - Prescribed by ONE of the following:**

- Endocrinologist
- Nephrologist

| Diagnosis                   | Human Immunodeficiency Virus (HIV)-Associated Cachexia (Serostim only) |

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

|                 |                       |
|-----------------|-----------------------|
| Approval Length | 3 month(s)            |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Prior Authorization   |

**Approval Criteria**

**1** - Serostim will be approved based on submission of medical records documenting ALL of the following criteria:

**1.1** Diagnosis of HIV-associated wasting syndrome or cachexia

**AND**

**1.2** Involuntary weight loss of greater than or equal to 10%

**AND**

**1.3** ONE of the following:

**1.3.1** Chronic diarrhea (2 loose stools daily for more than 30 days)

**OR**

**1.3.2** BOTH of the following:

- Chronic weakness
- Fever

**AND**

**1.4** Symptoms lasting greater than or equal to 30 days (intermittent or constant)

**AND**

**1.5** Absence of a concurrent condition other than HIV infection that may cause these findings

(e.g., depression, mycobacterium avium complex, chronic infectious diarrhea, or malignancy except for Kaposi's sarcoma limited to skin or mucous membranes)

**AND**

**1.6** A nutritional evaluation has been completed since onset of wasting first occurred

**AND**

**1.7** Patient's anti-retroviral therapy has been optimized to decrease the viral load

| <p><b>Approval Criteria</b></p> <p><b>1 - Submission of medical records documenting all of the following:</b></p> <p><b>1.1 Diagnosis of severe primary IGF-1 deficiency (PIGFD)</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2 Documentation of height below -3.0 SD mean for age and gender</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3 Documentation of IGF-1 below -3.0 SD mean for age and gender</b></p> |                                                                                |

**AND**

**1.4** Documentation of BOTH of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Calculated growth velocity

**AND**

**1.5** ONE of the following:

**1.5.1** Patient is unresponsive to a trial of growth hormone therapy

**OR**

**1.5.2** Documentation of ONE of the following:

- Very low or undetectable level of GHBP
- Very low or undetectable level of GHR mutations known to cause Laron syndrome/GH insensitivity syndrome
- GH1 gene deletion (GHD type 1A)
- GH-neutralizing antibodies
- STT5b gene mutation
- IGF-1 gene deletion or mutation

**AND**

**2** - Other causes of low IGF-I levels have been ruled out (e.g., growth hormone deficiency, undernutrition, hepatic disease)

**AND**

**3** - Patient will not be treated with concurrent growth hormone therapy

**AND**

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**4 - Prescribed by an endocrinologist**

|                 |                                                                                |
|-----------------|--------------------------------------------------------------------------------|
| Diagnosis       | Severe Primary IGF-1 Deficiency / Growth Hormone Gene Deletion (Increlex only) |
| Approval Length | 12 month(s)                                                                    |
| Therapy Stage   | Reauthorization                                                                |
| Guideline Type  | Prior Authorization                                                            |

**Approval Criteria**

**1 -** Submission of medical records documenting a height increase of at least 2 cm/year over the previous year of treatment as confirmed by ALL of the following:

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity
- Growth chart for height for age and gender

**AND**

**2 -** Submission of medical records documenting BOTH of the following:

- Expected adult height not obtained
- Expected adult height goal

**AND**

**3** - Patient is not treated with concurrent growth hormone therapy

**AND**

**4** - Prescribed by an endocrinologist

Notes

**\*\*Please Note:** The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, efficacy, safety, or long-term consequences of GH therapy in children with ISS who are otherwise healthy.  
[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Somatropin (Genotropin®, Humatrope®, Norditropin®, Nutropin AQ NuSpin®, Omnitrope®, Saizen®, Zomacton®) is indicated for the treatment of pediatric patients with growth failure due to inadequate secretion of endogenous growth hormone (GH), growth hormone deficiency (GHD), short stature associated with Turner syndrome or Noonan syndrome, idiopathic short stature (ISS), short-stature or growth failure in short stature homeobox-containing gene homeobox (SHOX) gene deficiency, growth failure due to Prader-Willi syndrome, short stature in children born small for gestational age (SGA) with no catch-up growth by 2 years to 4 years of age, and chronic kidney disease (CKD) up to the time of renal transplantation., growth failure in children with chronic renal insufficiency up to the time of transplant, short bowel syndrome in patients receiving specialized nutritional support, and HIV-associated wasting. Somatropin is also indicated for replacement of endogenous GH in adults with confirmed GHD.

Ngenla™ (somatogon-ghla), is indicated for the treatment of pediatric patients aged 3 years and older who have growth failure due to inadequate secretion of endogenous GH.

Skytrofa™ (lonapegsomatropin-tcgd) is indicated for the treatment of pediatric patients 1 year and older who weigh at least 11.5 kg and have growth failure due to inadequate secretion of endogenous GH. It is also indicated for the replacement of endogenous GH in adults with GHD.

Sogroya® (somapacitan-beco) is indicated for the treatment of pediatric patients aged 2.5 years and older who have growth failure due to inadequate secretion of endogenous GH. It is also indicated for the replacement of endogenous GH in adults with GHD.

Serostim® (somatropin) is indicated for the treatment of HIV patients with wasting or cachexia to increase lean body mass and body weight and improve physical endurance.

Zorbtive® (somatropin) is indicated for the treatment of short bowel syndrome in adult patients receiving specialized nutritional support.

Increlex® (mecasermin) is indicated for the treatment of growth failure in pediatric patients 2 years of age and older with severe primary insulin-like growth factor-1 (IGF-1) deficiency or with GH gene deletion who have developed neutralizing antibodies to GH.

#### **\*Educational Statement**

Documentation of previous height, current height and goal expected adult height will be required for renewal.

#### **Additional Clinical Rules**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

| <b>Ovulation Induction</b> Novarel (chorionic gonadotropin) and Pregnyl (chorionic gonadotropin) are indicated for induction of ovulation and pregnancy in the anovulatory, infertile woman in whom the cause of anovulation is secondary and not due to primary ovarian failure, and who has been appropriately pretreated with human menopausal gonadotropins. They are also indicated for prepubertal cryptorchidism not due to anatomic obstruction and selected cases of hypogonadotropic hypogonadism (hypogonadism secondary to a pituitary deficiency) in males. [4-5] |
| <b>Drug Name: Ovidrel (choriogonadotropin alfa)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Ovulation Induction</b> Ovidrel (choriogonadotropin alfa) is indicated for the induction of final follicular maturation and early luteinization in infertile women who have undergone pituitary desensitization and who have been appropriately pretreated with follicle stimulating hormones as part of an Assisted Reproductive Technology (ART) program such as in vitro fertilization                                                                                                                                                                                   |

and embryo transfer. It is also indicated for the induction of ovulation and pregnancy in anovulatory infertile patients in whom the cause of infertility is functional and not due to primary ovarian failure. [6]

**Drug Name: Novarel (chorionic gonadotropin), Pregnyl (chorionic gonadotropin), Ovidrel (choriogonadotropin alfa)**

**Prepubertal Cryptorchidism** hCG may also be used to treat cryptorchidism in boys because hCG is thought to induce testicular descent in situations when descent would have occurred at puberty. hCG thus may help to predict whether or not orchiopexy will be needed in the future. Although, in some cases, descent following hCG administration is permanent, in most cases the response is temporary. [1-3]

**Hypogonadotropic Hypogonadism** hCG is also used to induce puberty in boys and to treat androgen deficiency in hypogonadotropic hypogonadism. However, the major use of hCG preparations in males is in the initiation and maintenance of spermatogenesis in hypogonadotropic men who desire fertility. [1-3]

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>The body produces two types of gonadotropins, <a href="#">follicle-stimulating hormone (FSH)</a> and <a href="#">luteinizing hormone (LH)</a>, both of which play a role in fertility and human reproduction. After they are produced by the <a href="#">pituitary gland</a>, gonadotropins trigger production of other sex</p> |

hormones which then promote production of egg and sperm. Produced in pregnant women by the placenta and extracted from the urine, human chorionic gonadotropin (hCG) is similar in chemical structure and function to LH.

hCG is routinely used to trigger ovulation in the treatment of infertility, a disease of the reproductive system defined as one of the following:

- inability to achieve a successful pregnancy due to an individual's medical, sexual, or reproductive history;
- failure to achieve a pregnancy after 12 months or more of regular unprotected sexual intercourse when the female partner is less than 35 years;
- failure to achieve a pregnancy after 6 months or more of regular unprotected sexual intercourse when the female partner is 35 years or older

hCG may also be used to treat cryptorchidism in boys because hCG is thought to induce testicular descent in situations when descent would have occurred at puberty. hCG thus may help to predict whether or not orchiopexy will be needed in the future. Although, in some cases, descent following hCG administration is permanent, in most cases the response is temporary. hCG is also used to induce puberty in boys and to treat androgen deficiency in hypogonadotropic hypogonadism. However, the major use of hCG preparations in males is in the initiation and maintenance of spermatogenesis in hypogonadotropic men who desire fertility.

Novarel (chorionic gonadotropin) and Pregnyl (chorionic gonadotropin) are indicated for induction of ovulation and pregnancy in the anovulatory, infertile woman in whom the cause of anovulation is secondary and not due to primary ovarian failure, and who has been appropriately pretreated with human menopausal gonadotropins. They are also indicated for prepubertal cryptorchidism not due to anatomic obstruction and selected cases of hypogonadotropic hypogonadism (hypogonadism secondary to a pituitary deficiency) in males.

Ovidrel (choriogonadotropin alfa) is indicated for the induction of final follicular maturation and early luteinization in infertile women who have undergone pituitary desensitization and who have been appropriately pretreated with follicle stimulating hormones as part of an Assisted Reproductive Technology (ART) program such as *in vitro* fertilization and embryo transfer. It is also indicated for the induction of ovulation and pregnancy in anovulatory infertile patients in whom the cause of infertility is functional and not due to primary ovarian failure.

**Additional Clinical Rules:**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Epclusa (sofobuvir/velpatasvir)</b>                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Hepatitis C</b> Indicated for the treatment of adult and pediatric patients 3 years of age and older with chronic hepatitis C virus (HCV) genotype 1, 2, 3, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis, or with decompensated cirrhosis in combination with ribavirin.                                                                                                                                           |
| <b>Drug Name: Harvoni (ledipasvir/sofosbuvir) and Harvoni Pak</b>                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Hepatitis C</b> Indicated for the treatment of HCV in adults and pediatric patients 3 years of age and older for genotype 1, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis, genotype 1 infection with decompensated cirrhosis, in combination with ribavirin, or with genotype 1 or 4 infection who are liver transplant recipients without cirrhosis or with compensated cirrhosis, in combination with ribavirin. |
| <b>Drug Name: Mavyret (glecaprevir/pibrentasvir)</b>                                                                                                                                                                                                                                                                                                                                                                                          |

**Hepatitis C** Indicated for the treatment of adult and pediatric patients 3 years and older with chronic HCV genotype 1, 2, 3, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis (Child-Pugh A).

**Hepatitis C** Indicated for the treatment of adult and pediatric patients 3 years and older with HCV genotype 1 infection, who previously have been treated with a regimen containing an HCV NS5A inhibitor or an NS3/4A protease inhibitor, but not both.

**Drug Name: Sovaldi (sofosbuvir) and Sovaldi Pak**

**Hepatitis C** Indicated for the treatment of adult patients with genotype 1, 2, 3, or 4 chronic HCV infection without cirrhosis or with compensated cirrhosis as a component of a combination antiviral treatment regimen and pediatric patients 3 years of age and older with genotype 2 or 3 chronic HCV without cirrhosis or with compensated cirrhosis in combination with ribavirin.

**Drug Name: Vosevi (sofosbuvir/velpatasvir/voxilaprevir)**

**Hepatitis C** Indicated for the treatment of adult patients with chronic HCV infection without cirrhosis or with compensated cirrhosis (Child-Pugh A) who have genotype 1, 2, 3, 4, 5, or 6 infection and have previously been treated with an HCV regimen containing an NS5A inhibitor or genotype 1a or 3 infection and have previously been treated with an HCV regimen containing sofosbuvir without an NS5A inhibitor.

**Drug Name: Zepatier (elbasvir/grazoprevir)**

**Hepatitis C** Indicated for treatment of chronic HCV genotype 1 or 4 infection in adult and pediatric patients 12 years of age and older or weighing at least 30 kg.

**Hepatitis C** Indicated for use with ribavirin in certain patient populations.

## 2 . Criteria

|                                       |                     |
|---------------------------------------|---------------------|
| Product Name:Mavyret, Mavyret Pak [a] |                     |
| Diagnosis                             | Acute Hepatitis C   |
| Approval Length                       | 8 Week(s)           |
| Guideline Type                        | Prior Authorization |
| Approval Criteria                     |                     |

**1 - Diagnosis of acute hepatitis C genotype 1, 2, 3, 4, 5 or 6 infection**

**AND**

**2 - Patient is treatment-naïve**

**AND**

**3 - ONE of the following:**

- Patient is without cirrhosis
- Patient has compensated cirrhosis (Child-Pugh A)

**AND**

**4 - Patient is not receiving Mavyret in combination with another hepatitis C virus (HCV) direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]**

**AND**

**5 - Provider attests to BOTH of the following:**

- It is inappropriate for the patient to delay treatment to allow for potential spontaneous clearance of HCV
- Patient demonstrates treatment readiness, including the ability to adhere to the treatment regimen

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

#### Benefit/Coverage/Program Information

##### Chart 1 - Mavyret

##### Treatment Naïve Patients

| HCV Genotype        | Treatment Duration |                                      |
|---------------------|--------------------|--------------------------------------|
|                     | No cirrhosis       | Compensated cirrhosis (Child-Pugh A) |
| 1, 2, 3, 4, 5, or 6 | 8 weeks            | 8 weeks                              |

##### Treatment Experienced Patients

|                  |                                                                                          | Treatment Duration |                                      |
|------------------|------------------------------------------------------------------------------------------|--------------------|--------------------------------------|
| HCV Genotype     | Patients previously treated with a regimen containing:                                   | No cirrhosis       | Compensated cirrhosis (Child-Pugh A) |
| 1                | An NS5A inhibitor <sup>1</sup> without prior treatment with an NS3/4A protease inhibitor | 16 weeks           | 16 weeks                             |
|                  | An NS3/4A PI <sup>2</sup> without prior treatment with an NS5A inhibitor                 | 12 weeks           | 12 weeks                             |
| 1, 2, 4, 5, or 6 | PRS <sup>3</sup>                                                                         | 8 weeks            | 12 weeks                             |
| 3                | PRS <sup>3</sup>                                                                         | 16 weeks           | 16 weeks                             |

##### Kidney or Liver Transplant Recipients

| HCV Genotype        | Treatment Duration |                                      |
|---------------------|--------------------|--------------------------------------|
|                     | No cirrhosis       | Compensated cirrhosis (Child-Pugh A) |
| 1, 2, 3, 4, 5, or 6 | 12 week            | 12 weeks                             |

1. In clinical trials, subjects were treated with prior regimens containing ledipasvir and sofosbuvir or daclatasvir with pegylated interferon and ribavirin.

2. In clinical trials, subjects were treated with prior regimens containing simeprevir and sofosbuvir, or simeprevir, boceprevir, or telaprevir with pegylated interferon and ribavirin.

3. PRS = prior treatment experience with regimens containing interferon, pegylated interferon, ribavirin, and/or sofosbuvir, but no prior treatment experience with an HCV NS3/4A PI or NS5A inhibitor.

#### Chart 2 - Epclusa

| Patient Population                                                                | Recommended Treatment Regimen    |
|-----------------------------------------------------------------------------------|----------------------------------|
| Patients without cirrhosis and patients with compensated cirrhosis (Child-Pugh A) | EPCLUSA for 12 weeks             |
| Patients with decompensated cirrhosis (Child-Pugh B and C)                        | EPCLUSA + ribavirin for 12 weeks |

#### Chart 3 - Harvoni

##### Recommended treatment regimen and duration:

| Genotype   | Patient Population                                                             | Regimen and Duration |
|------------|--------------------------------------------------------------------------------|----------------------|
| Genotype 1 | Treatment-naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A) | HARVONI 12 weeks*    |
|            | Treatment-experienced without cirrhosis                                        | HARVONI 12 weeks     |
|            | Treatment-experienced with compensated cirrhosis (Child-Pugh A)                | HARVONI 24 weeks**   |

|                     |                                                                                                                                       |                              |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
|                     | Treatment-naïve and treatment-experienced with decompensated cirrhosis (Child-Pugh B or C)                                            | HARVONI + ribavirin 12 weeks |
| Genotype 1 or 4     | Treatment-naïve and treatment-experienced liver transplant recipients without cirrhosis, or with compensated cirrhosis (Child-Pugh A) | HARVONI + ribavirin 12 weeks |
| Genotype 4, 5, or 6 | Treatment-naïve and treatment-experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A)                              | HARVONI 12 weeks             |

\*HARVONI for 8 weeks can be considered in treatment-naïve genotype 1 patients without cirrhosis who have pre-treatment HCV RNA less than 6 million IU/mL

\*\*HARVONI + ribavirin for 12 weeks can be considered in treatment-experienced genotype 1 patients with cirrhosis who are eligible for ribavirin

#### Chart 4 - Sovaldi

##### Recommended Adult Treatment Regimen and Duration

|                 | Adult Patient Population                                                                                 | Regimen and Duration                                 |
|-----------------|----------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| Genotype 1 or 4 | Treatment naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A)                           | SOVALDI + peginterferon alfa + ribavirin<br>12 weeks |
| Genotype 2      | Treatment naïve and treatment experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A) | SOVALDI + ribavirin<br>12 weeks                      |
| Genotype 3      | Treatment naïve and treatment experienced without cirrhosis or with                                      | SOVALDI + ribavirin<br>24 weeks                      |

|  |                                         |  |
|--|-----------------------------------------|--|
|  | compensated cirrhosis<br>(Child-Pugh A) |  |
|--|-----------------------------------------|--|

SOVALDI in combination with ribavirin for 24 weeks can be considered for adult patients with genotype 1 infection who are interferon ineligible.

SOVALDI should be used in combination with ribavirin for treatment of HCV in adult patients with hepatocellular carcinoma awaiting liver transplantation for up to 48 weeks or until liver transplantation, whichever occurs first.

### Recommended Treatment Regimen and Duration for Pediatric Patients 3 Years of Age and Older

|            | <b>Pediatric Patient Population 3 Years of Age and Older</b>                                             | <b>Regimen and Duration</b>     |
|------------|----------------------------------------------------------------------------------------------------------|---------------------------------|
| Genotype 2 | Treatment naïve and treatment experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A) | SOVALDI + ribavirin<br>12 weeks |
| Genotype 3 | Treatment naïve and treatment experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A) | SOVALDI + ribavirin<br>24 weeks |

### Chart 6- Vosevi

| <b>Genotype</b>     | <b>Patients previously treated with an HCV regimen containing:</b> | <b>VOSEVI Duration</b> |
|---------------------|--------------------------------------------------------------------|------------------------|
| 1, 2, 3, 4, 5, or 6 | An NS5A inhibitor <sup>1</sup>                                     | 12 weeks               |
| 1a or 3             | Sofosbuvir without an NS5A inhibitor <sup>2</sup>                  | 12 weeks               |

1. In clinical trials, prior NS5A inhibitor experience included daclatasvir, elbasvir, ledipasvir, ombitasvir, or velpatasvir.

2. In clinical trials, prior treatment experience included sofosbuvir with or without any of the following: peginterferon alfa/ribavirin, ribavirin, HCV NS3/4A protease inhibitor (boceprevir, simeprevir or telaprevir).

### Chart 7 - Zepatier

#### Dosage Regimens and Durations for ZEPATIER in Patients with Genotype 1 or 4 HCV with or without Cirrhosis

| Patient Population                                                                                              | Treatment            | Duration |
|-----------------------------------------------------------------------------------------------------------------|----------------------|----------|
| Genotype 1a: treatment naïve or PegIFN/RBV experienced* <u>without</u> baseline NS5A polymorphisms <sup>+</sup> | ZEPATIER             | 12 weeks |
| Genotype 1a: treatment naïve or PegIFN/RBV experienced* <u>with</u> baseline NS5A polymorphisms <sup>+</sup>    | ZEPATIER + ribavirin | 16 weeks |
| Genotype 1b: treatment naïve or PegIFN/RBV experienced*                                                         | ZEPATIER             | 12 weeks |
| Genotype 1a or 1b: PegIFN/RBV/PI experienced <sup>++</sup>                                                      | ZEPATIER + ribavirin | 12 weeks |
| Genotype 4: treatment naïve                                                                                     | ZEPATIER             | 12 weeks |
| Genotype 4: PegIFN/RBV experienced*                                                                             | ZEPATIER + ribavirin | 16 weeks |

\*Peginterferon alfa + ribavirin

+Polymorphisms at amino acid positions 28, 30, 31, or 93

++Peginterferon alfa + ribavirin + HCV NS3/4 A protease inhibitor

### Background

Epclusa (sofosbuvir/velpatasvir) is indicated for the treatment of adult and pediatric patients 3 years of age and older with chronic hepatitis C virus (HCV) genotype 1, 2, 3, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis, or with decompensated cirrhosis in combination with ribavirin.

Harvoni and Harvoni Pak (ledipasvir/sofosbuvir) are indicated for the treatment of HCV in adults and pediatric patients 3 years of age and older for genotype 1, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis, genotype 1 infection with decompensated cirrhosis, in combination with ribavirin, or with genotype 1 or 4 infection who are liver transplant recipients without cirrhosis or with compensated cirrhosis, in combination with ribavirin.

Mavyret (glecaprevir/pibrentasvir) is indicated for the treatment of adult and pediatric patients 3 years and older with acute or chronic HCV genotype 1, 2, 3, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis (Child-Pugh A). Mavyret is also indicated for the treatment of adult and pediatric patients 3 years and older or with HCV genotype 1 infection, who previously have been treated with a regimen containing an HCV NS5A inhibitor or an NS3/4A protease inhibitor, but not both.

Sovaldi and Solvandi Pak (sofosbuvir) are indicated for the treatment of adult patients with genotype 1, 2, 3, or 4 chronic HCV infection without cirrhosis or with compensated cirrhosis as a component of a combination antiviral treatment regimen and pediatric patients 3 years of age and older with genotype 2 or 3 chronic HCV without cirrhosis or with compensated cirrhosis in combination with ribavirin.

Vosevi (sofosbuvir/velpatasvir/voxilaprevir) is indicated for the treatment of adult patients with chronic HCV infection without cirrhosis or with compensated cirrhosis (Child-Pugh A) who have genotype 1, 2, 3, 4, 5, or 6 infection and have previously been treated with an HCV

regimen containing an NS5A inhibitor or genotype 1a or 3 infection and have previously been treated with an HCV regimen containing sofosbuvir without an NS5A inhibitor.

Zepatier (elbasvir/grazoprevir) is indicated for treatment of chronic HCV genotype 1 or 4 infection in adult and pediatric patients 12 years of age and older or weighing at least 30 kg. Zepatier is indicated for use with ribavirin in certain patient populations.

#### **Additional Clinical Rules**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may be in place.

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Hycamtin (topotecan hydrochloride) is a topoisomerase inhibitor indicated for the treatment of patients with relapsed small cell lung cancer. [1] The National Cancer Comprehensive Network (NCCN) also recommends Hycamtin may be considered as single-agent treatment (useful in certain circumstances) for M1 disseminated disease with or without surgery and/or radiation therapy if anti-PD-L1 or anti-PD-1 therapy is contraindicated or disease has progressed on anti-PD-L1 or anti-PD-1 therapy. [2]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Ibrance® (palbociclib) is a kinase inhibitor indicated for the treatment of hormone receptor (HR)-positive human epidermal growth factor receptor 2 (HER2)-negative advanced or metastatic breast cancer in combination with an aromatase inhibitor as initial endocrine-based therapy, or in combination with Faslodex® (fulvestrant) in patients with disease progression following endocrine therapy.</p> <p>The use of an aromatase inhibitor in men with breast cancer is ineffective without concomitant suppression of testicular steroidogenesis. The National Comprehensive Cancer Network (NCCN) recommends the use of Ibrance as single-agent therapy for unresectable retroperitoneal well-differentiated/dedifferentiated liposarcoma (WD-DDLS).</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"><li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li><li>• Supply limits may be in place.</li></ul> |

| <p><b>Background:</b></p> <p>Iclusig (ponatinib) is a kinase inhibitor indicated for the treatment of patients with newly diagnosed Philadelphia chromosome-positive acute Lymphoblastic Leukemia (Ph+ ALL), in combination with chemotherapy, as monotherapy in Ph+ ALL for whom no other kinase inhibitors are indicated, or T315I-positive Ph+ ALL. Iclusig is also indicated in chronic phase (CP) chronic myeloid leukemia (CML) with resistance or intolerance to at least two prior kinase inhibitors, accelerated phase (AP) or blast phase (BP) CML for whom no other kinase inhibitors are indicated, and T315I-positive CML (chronic phase, accelerated phase, or blast phase).</p> <p>The National Comprehensive Cancer Network (NCCN) also recommends Iclusig for the treatment of myeloid, lymphoid, or mixed lineage neoplasms with eosinophilia and FGFR1 or ABL1 rearrangements, and gastrointestinal stromal tumors .</p> <p><b>Additional Clinical Programs:</b></p> <ul style="list-style-type: none"> <li>Supply limits may be in place.</li> </ul> |

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Idhifa (enasidenib) is an isocitrate dehydrogenase-2 inhibitor indicated for the treatment of adult patients with relapsed or refractory acute myeloid leukemia (AML) with an isocitrate dehydrogenase-2 (IDH2) mutation as detected by an FDA-approved test. The National Cancer Comprehensive Network (NCCN) also recommends the use of Idhifa as a single agent, or in combination with azacitidine, in patients with IDH2-mutated AML for treatment induction when not a candidate for intensive induction therapy, as follow-up after induction therapy following response to previous lower intensity therapy with the same regimen, or as consolidation therapy as continuation of low-intensity regimen used for induction.

Idhifa has a black box warning for differentiation syndrome with or without concomitant hyperleukocytosis. Please see full prescribing information for additional details.

##### Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

## 1 . Indications

|                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Imbruvica (ibrutinib)</b>                                                                                                                                                                                   |
| <b>Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma</b> Indicated for the treatment of adult patients with chronic lymphocytic leukemia (CLL)/small lymphocytic lymphoma (SLL).                                    |
| <b>Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma with 17p deletion</b> Indicated for the treatment of adult patients with chronic lymphocytic leukemia (CLL)/small lymphocytic lymphoma (SLL) with 17p deletion |
| <b>Waldenström's Macroglobulinemia</b> Indicated for the treatment of adult patients with Waldenström's macroglobulinemia.                                                                                                |
| <b>Chronic Graft versus Host Disease</b> Indicated for the treatment of patients with chronic graft-versus-host disease after failure of one or more lines of systemic therapy. [1]                                       |
| <b>Other Uses</b> The National Cancer Comprehensive Network (NCCN) also recommends the use                                                                                                                                |

of Imbruvica for the B-cell lymphoma types: extranodal marginal zone lymphoma (EMZL) of the stomach and of nongastric sites (noncutaneous), mantle cell lymphoma (MCL), gastric and nongastric MALT, diffuse large B-cell, AIDS/HIV-related B-cell, high grade B-cell lymphoma, and post-transplant lymphoproliferative disorders. NCCN also recommends its use for primary CNS lymphoma and hairy cell leukemia.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                       |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Imbruvica (ibrutinib) is a kinase inhibitor indicated for the treatment of adult patients with the following: chronic lymphocytic leukemia (CLL)/Small lymphocytic lymphoma (SLL); chronic lymphocytic leukemia (CLL)/SLL with 17p deletion; and Waldenström's macroglobulinemia (WM). Imbruvica is also FDA approved for the treatment of adult and pediatric patients age 1 year and older with chronic graft versus host disease (cGVHD) after failure of one or more lines of systemic therapy.[1]

The National Cancer Comprehensive Network (NCCN) also recommends the use of Imbruvica for the B-cell lymphoma types: extranodal marginal zone lymphoma (EMZL) of the stomach and of nongastric sites (noncutaneous), mantle cell lymphoma (MCL), diffuse large B-cell, HIV-related B-cell, high grade B-cell lymphoma, and post-transplant lymphoproliferative disorders. NCCN also recommends its use for primary CNS lymphoma and hairy cell leukemia.[2]

**Additional Clinical Rules:**

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Supply limits may be in place.

### Approval Criteria

1 - Documentation of positive clinical response to Ingrezza therapy

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Ingrezza is a vesicular monoamine transporter 2 (VMAT2) inhibitor indicated for the treatment of adults with tardive dyskinesia.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Inlyta (axitinib)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Advanced renal cell carcinoma (RCC)</b> Indicated for the treatment of advanced renal cell carcinoma (RCC) after failure of one prior systemic therapy. Indicated in combination with either avelumab or pembrolizumab for the first-line treatment of patients with advanced RCC.                                                                                                                                                                                                        |
| <b>Off Label Uses: Other indications</b> The NCCN also recommends Inlyta in thymic carcinomas in certain settings for those unable to tolerate first-line therapy, for recurrent, advanced, or metastatic disease, and as second-line therapy, in combination with avelumab. NCCN also recognizes Inlyta as preferred therapy in combination with pembrolizumab for treatment of alveolar soft part sarcoma (ASPS) and as first-line treatment of relapsed or stage IV renal cell carcinoma. |

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                  |

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Background:</b><br><br>Inlyta® (axitinib) is a kinase inhibitor indicated for the treatment of advanced renal cell carcinoma (RCC) after failure of one prior systemic therapy. It is also indicated in |

combination with either avelumab or pembrolizumab for the first-line treatment of patients with advanced RCC.[1] The NCCN (National Comprehensive Cancer Network) recommends the use of Inlyta for treatment of unresectable, metastatic, or recurrent salivary gland tumors and follicular, oncocytic, and papillary carcinomas. The NCCN also recommends Inlyta in thymic carcinomas in certain settings for those unable to tolerate first-line therapy, for recurrent, advanced, or metastatic disease, and as second-line therapy, in combination with avelumab. NCCN also recognizes Inlyta as preferred therapy in combination with pembrolizumab for treatment of alveolar soft part sarcoma (ASPS) and as first-line treatment of relapsed or stage IV renal cell carcinoma.[2]

**Additional Clinical Programs:**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

| <b>Drug Name: Intron A (Interferon alfa-2b)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p><b>Chronic hepatitis C</b> Indicated for the treatment of chronic hepatitis C in patients 18 years of age or older with compensated liver disease who have a history of blood or blood-product exposure and/or are HCV antibody positive.</p> <p><b>Chronic hepatitis C with compensated liver disease</b> Indicated for the treatment of chronic hepatitis C in patients 3 years of age and older previously untreated with alpha interferon therapy and in patients 18 years of age and older who have relapsed following alpha interferon therapy.</p> <p><b>Chronic hepatitis B</b> Indicated for the treatment of chronic hepatitis B in patients 1 year of age or older with compensated liver disease. Patients who have been serum HBsAg positive for at least 6 months and have evidence of HBV replication (serum HBeAg positive) with elevated serum ALT are candidates for treatment.</p> |

**Hairy cell leukemia** Indicated for the treatment of patients 18 years of age or older with hairy cell leukemia.

**Malignant Melanoma** Indicated as adjuvant to surgical treatment in patients 18 years of age or older with malignant melanoma who are free of disease but a high risk for systemic recurrence, within 56 days of surgery.

**Follicular Non-Hodgkin's lymphoma** Indicated for the initial treatment of clinically aggressive follicular Non-Hodgkin's lymphoma in conjunction with anthracycline-containing combination chemotherapy in patients 18 years of age or older.

**Condylomata Acuminata** Indicated for intralesional treatment of selected patients 18 years of age or older with condylomata acuminata involving external surfaces of the genital and perianal areas.

**AIDS-Related Kaposi's Sarcoma** Indicated for the treatment of selected patients 18 years of age or older with AIDS-Related Kaposi's Sarcoma.

**The National Comprehensive Cancer Network (NCCN)** Recommends use of Intron A for myeloproliferative neoplasms (MPNs) such as essential thrombocytopenia (ET), polycythemia vera (PV), and primary myelofibrosis (PM), adult T-cell leukemia / lymphoma, mycosis fungoides / Sézary syndrome, and systemic mastocytosis.

#### Drug Name: Pegasys (peginterferon alfa-2a)

**Chronic hepatitis C** Indicated for the treatment of chronic hepatitis C (CHC) as part of a combination regimen with other hepatitis C virus (HCV) antiviral drugs in patients 5 years of age and older with compensated liver disease. Pegasys monotherapy is indicated for CHC only if patient has contraindication to or significant intolerance to other HCV antiviral drugs.

**HBeAg positive and HBeAg negative chronic hepatitis B** Indicated in the treatment of adult patients with HBeAg positive and HBeAg negative chronic hepatitis B infection who have compensated liver disease and evidence of viral replication and liver inflammation.

## 2 . Criteria

| Product Name: Intron A, Pegasys [a] |                                  |
|-------------------------------------|----------------------------------|
| Diagnosis                           | Treatment of Chronic Hepatitis B |
| Approval Length                     | 48 Week(s)                       |
| Guideline Type                      | Prior Authorization              |

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**Approval Criteria**

1 - Diagnosis of chronic Hepatitis B infection

**AND**

2 - Patient does not have decompensated liver disease\*

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

\*Defined as Child-Pugh Class B or C

Product Name: Intron A, Pegasys [a]

Diagnosis

Treatment of Chronic Hepatitis C

Approval Length

48 Week(s)

Guideline Type

Prior Authorization

**Approval Criteria**

1 - Diagnosis of chronic hepatitis C infection

**AND**

2 - Patient does not have decompensated liver disease\*

**AND**

3 - Will be used as part of a combination antiviral treatment regimen

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Intron A (interferon alfa-2b) is indicated for the treatment of chronic hepatitis C in patients 18 years of age or older with compensated liver disease who have a history of blood or blood-product exposure and/or are HCV antibody positive. Intron A has additional FDA labeling for the treatment of chronic hepatitis C in patients 3 years of age and older with compensated</p> |

liver disease previously untreated with alpha interferon therapy and in patients 18 years of age and older who have relapsed following alpha interferon therapy. Intron A is also indicated for the treatment of chronic hepatitis B in patients 1 year of age or older with compensated liver disease. Patients who have been serum HBsAg positive for at least 6 months and have evidence of HBV replication (serum HBeAg positive) with elevated serum ALT are candidates for treatment. Intron A is indicated for the treatment of patients 18 years of age or older with hairy cell leukemia. Intron A is indicated as adjuvant to surgical treatment in patients 18 years of age or older with malignant melanoma who are free of disease but a high risk for systemic recurrence, within 56 days of surgery. It is also indicated for the initial treatment of clinically aggressive follicular Non-Hodgkin's lymphoma in conjunction with anthracycline-containing combination chemotherapy in patients 18 years of age or older. Intron A is indicated for intralesional treatment of selected patients 18 years of age or older with condylomata acuminata involving external surfaces of the genital and perianal areas. It is also indicated for the treatment of selected patients 18 years of age or older with AIDS-Related Kaposi's Sarcoma. [1]

The National Comprehensive Cancer Network (NCCN) also recommends use of Intron A (interferon alfa-2b) for giant cell tumors of the bone, mycosis fungoides / Sézary syndrome, primary cutaneous CD30+ T-cell lymphoproliferative disorders, and adult T-cell leukemia/lymphoma [2]

Pegasys (peginterferon alfa-2a) is an inducer of the innate immune response indicated for the treatment of chronic hepatitis C (CHC) as part of a combination regimen with other hepatitis C virus (HCV) antiviral drugs in patients 5 years of age and older with compensated liver disease. Pegasys monotherapy is indicated for CHC only if patient has contraindication to or significant intolerance to other HCV antiviral drugs. Pegasys is indicated in the treatment of adult patients with HBeAg positive and HBeAg negative chronic hepatitis B (CHB) infection who have compensated liver disease and evidence of viral replication and liver inflammation. It is also indicated for the treatment of non-cirrhotic pediatric patients 3 years of age and older with HBeAg-positive CHB and evidence of viral replication and elevations in serum alanine aminotransferase (ALT). [3]

The National Comprehensive Cancer Network (NCCN) also recommends the use of Pegasys (peginterferon alfa-2a) in patients with chronic myeloid leukemia (CML), Erdheim-Chester disease (ECD), myeloproliferative neoplasms (MPNs) such as essential thrombocytopenia (ET), polycythemia vera (PV), and myelofibrosis (PM), and systemic mastocytosis, as well as mycosis fungoides/Sézary syndrome, hairy cell leukemia, primary cutaneous CD30+ T-cell lymphoproliferative disorders, and adult T-cell leukemia/lymphoma. [2,6-9]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes

(ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Iqirvo (elafibranor) is a peroxisome proliferator-activated receptor (PPAR) agonist indicated for the treatment of primary biliary cholangitis (PBC) in combination with ursodeoxycholic acid (UDCA) in adults who have an inadequate response to UDCA, or as monotherapy in patients unable to tolerate UDCA.</p> <p>This indication is approved under accelerated approval based on reduction of alkaline phosphatase (ALP). Improvement in survival or prevention of liver decompensation events have not been demonstrated. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trial(s). Use of Iqirvo is not recommended in patients who have or develop decompensated cirrhosis (e.g., ascites, variceal bleeding, hepatic encephalopathy). [1]</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>• Supply limits may be in place.</li> <li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> </ul> |

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Iressa (gefitinib)</b>                                                                                                                                                                                                                                                                                                               |
| <b>Non-small cell lung cancer (NSCLC)</b> Indicated as first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations.                                                                                  |
| <b>Off Label Uses: National Cancer Comprehensive Network (NCCN)</b> The National Cancer Comprehensive Network (NCCN) also recommends the use of Iressa in patients with NSCLC with EGFR S768I, L861Q, and/or G719X mutation positive tumors as well as patients with NSCLC with a known sensitizing EGFR mutation and associated brain metastases. |

## 2 . Criteria

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Iressa (gefitinib) is a tyrosine kinase inhibitor indicated as first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations [1] The National Cancer Comprehensive Network (NCCN) also recommends the use of Iressa in patients with NSCLC with EGFR S768I, L861Q, and/or G719X mutation positive tumors as well as patients with NSCLC with a known sensitizing EGFR mutation and associated brain metastases.[2]

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Exjade (deferasirox) and Jadenu (deferasirox) are iron chelating agents indicated for the treatment of chronic iron overload due to blood transfusions (transfusional hemosiderosis) in patients 2 years of age and older. The safety and efficacy of deferasirox, when administered with other iron chelation therapy, have not been established. It is recommended that therapy with deferasirox be started when a patient has evidence of chronic transfusional iron overload, such as the transfusion of approximately 100 mL/kg of packed red blood cells (approximately 20 units for a 40-kg patient) and a serum ferritin consistently &gt;1000 mcg/L. Deferasirox is also indicated for the treatment of chronic iron overload in patients 10 years of age and older with non-transfusion dependent thalassemia (NTDT) syndromes and with a liver iron (Fe) concentration (LIC) of at least 5 mg Fe per gram of dry weight (mg Fe/g dw) and a serum ferritin greater than 300 mcg/L. This indication is based on achievement of an LIC less than 5 mg Fe/g dw.</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>• Step therapy may be in place.</li> </ul> |

## **Approval Criteria**

**1 - BOTH of the following:**

**1.1** Diagnosis of ONE of the following:

- Peripheral T-Cell Lymphoma not otherwise specified (PTCL-NOS)
- Enteropathy-associated T-cell lymphoma (EATL)
- Monomorphic epitheliotropic intestinal T-cell lymphoma (MEITL)
- Angioimmunoblastic T-cell lymphoma (AITL)
- Nodal peripheral T-cell lymphoma with T-follicular helper phenotype (PTCL, TFH)
- Follicular T-cell lymphoma (FTCL)
- Anaplastic large cell lymphoma (ALCL)

**AND**

**1.2** Used as initial palliative intent therapy or second-line and subsequent therapy for relapsed/refractory disease

**OR**

**2 - BOTH of the following:**

**2.1** ONE of the following diagnoses:

- T-cell large granular lymphocytic leukemia
- T-cell prolymphocytic leukemia

**AND**

**2.2** Used as second-line or subsequent therapy

**OR**

**3 - BOTH of the following:**

- Diagnosis of hepatosplenic T-cell lymphoma

| <b>Benefit/Coverage/Program Information</b><br><br><p>Jakafi (ruxolitinib) is a kinase inhibitor indicated for treatment of patients with intermediate or high-risk myelofibrosis, including primary myelofibrosis (PMF), post-polycythemia vera myelofibrosis and post-essential thrombocythemia myelofibrosis. It is also indicated in patients with polycythemia vera who have had an inadequate response to or are intolerant of hydroxyurea. It is also indicated for the treatment of steroid-refractory acute graft-versus-host disease and chronic graft-versus-host disease after failure of one or two lines of systemic therapy in adult and pediatric patients 12 years and older.</p> <p>The National Cancer Comprehensive Network (NCCN) also recommends Jakafi for the treatment of polycythemia vera, essential thrombocythemia, accelerated/blast phase myeloproliferative neoplasm, lymphoid, myeloid/lymphoid neoplasms with eosinophilia and JAK2 rearrangement and myelodysplastic syndromes, pediatric acute lymphoblastic leukemia, T-Cell Lymphomas, and management of CAR-T-cell and immunotherapy-related toxicities.</p> |

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Joenia (leniolisib) is a kinase inhibitor indicated for the treatment of activated phosphoinositide 3-kinase delta (PI3K $\delta$ ) syndrome (APDS) in adult and pediatric patients 12 years of age and older.[1]

APDS is a rare primary immunodeficiency caused by variations in the genes encoding subunits of the PI3K $\delta$  enzyme complex and PI3K $\delta$  hyperactivity. PI3K $\delta$  hyperactivity results in altered development of B and T-cell which can lead to severe lymphoproliferation, recurrent infections, autoimmune disorders, and malignancies. APDS can be characterized by a variety of symptoms, including recurrent respiratory tract infections (e.g., pneumonia, otitis media, rhinosinusitis), recurrent herpesvirus infections (e.g., Epstein Barr virus, cytomegalovirus, herpes simplex virus), lymphoproliferation (e.g., lymphadenopathy, hepatosplenomegaly), autoimmune cytopenia and glomerulonephritis, and neurodevelopmental delay. A definitive diagnosis can be made through genetic testing. Current standard of care includes antimicrobial prophylaxis (e.g., trimethoprim/sulfamethoxazole, azithromycin), immunoglobulin replacement therapy (IRT), immunosuppressive therapy (e.g., glucocorticoids, rituximab), and hematopoietic stem cell transplant (HSCT).[4]

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

**Benefit/Coverage/Program Information**

**Background:**

Juxtapid (lomitapide) is a microsomal triglyceride transfer protein inhibitor indicated as an adjunct to a low-fat diet and other lipid lowering treatments, including LDL apheresis where available, to reduce low-density lipoprotein cholesterol (LDL-C), total cholesterol (TC), apolipoprotein B (apo B), and non-high-density lipoprotein cholesterol (non-HDL-C) in patients with homozygous familial hypercholesterolemia (HoFH). The safety and efficacy of Juxtapid have not been established in patients with hypercholesterolemia who do not have HoFH including those with heterozygous familial hypercholesterolemia (HeFH). The effect of Juxtapid on cardiovascular morbidity and mortality has not been determined.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**5.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following:

- Maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- Maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)

**OR**

**5.2** Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs

**AND**

**6** - Prescriber attests the patient's diabetes is being managed with a diabetes medication with proven CKD benefit [e.g., SGLT2 inhibitor (e.g., Jardiance), GLP1 receptor agonist (e.g., Ozempic)]

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Kerendia (finerenone) is indicated to reduce the risk of sustained estimated glomerular filtration rate (eGFR) decline, end-stage kidney disease, cardiovascular death, non-fatal myocardial infarction, and hospitalization for heart failure in adult patients with chronic kidney disease (CKD) associated with type 2 diabetes (T2D). Kerendia is also indicated to reduce the risk of cardiovascular death, hospitalization for heart failure, and urgent heart failure visits in adult patients with heart failure with left ventricular ejection fraction (LVEF)  $\geq$  40%.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Kisqali (ribociclib) is a kinase inhibitor indicated for the treatment of adult patients with hormone receptor (HR)- positive, human epidermal growth factor receptor 2 (HER2)-negative advanced or metastatic cancer in combination with an aromatase inhibitor as initial endocrine-based therapy or fulvestrant as initial endocrine-based therapy or following disease progression on endocrine therapy. Kisqali is also indicated for use in combination with an aromatase inhibitor for the adjuvant treatment of adults with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative stage II and III early breast cancer at high risk of recurrence.</p> <p>The National Comprehensive Cancer Network (NCCN) recommends the use of Kisqali similarly for men and premenopausal women receiving ovarian ablation/suppression with recurrent unresectable (local or regional) or metastatic HR-positive HER2-negative breast cancer disease, in combination with an aromatase inhibitor or Faslodex®(fulvestrant). The use of an aromatase inhibitor in men with breast cancer is ineffective without concomitant suppression of testicular steroidogenesis. The NCCN also recommends Kisqali for estrogen receptor (ER)-positive recurrent or metastatic endometrial carcinoma in combination with letrozole.</p> |

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Kisqali Femara Co-Pack is a co-packaged product containing ribociclib, a kinase inhibitor, and letrozole, an aromatase inhibitor, and is indicated as initial endocrine-based therapy for the treatment of adult patients with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative advanced or metastatic breast cancer. Kisqali is also indicated for use in combination with an aromatase inhibitor for the adjuvant treatment of adults with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative stage II and III early breast cancer at high risk of recurrence.

The National Comprehensive Cancer Network (NCCN) recommends the use of Kisqali similarly for men and premenopausal women receiving ovarian ablation/suppression with recurrent unresectable (local or regional) or metastatic HR-positive HER2-negative breast cancer disease in combination with an aromatase inhibitor or fulvestrant. The use of an aromatase inhibitor in men with breast cancer is ineffective without concomitant suppression of testicular steroidogenesis. The NCCN also recommends Kisqali for estrogen receptor (ER)-positive recurrent or metastatic endometrial carcinoma in combination with letrozole.

##### Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

## 1 . Indications

|                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Lenvima (lenvatinib)</b>                                                                                                                                                                                                                                                              |
| <b>Thyroid Carcinoma</b> Indicated for the treatment of patients with locally recurrent or metastatic, progressive, radioactive iodine-refractory differentiated thyroid cancer.                                                                                                                    |
| <b>Renal Cell Cancer</b> Indicated in combination with everolimus for the treatment of patients with advanced renal cell carcinoma (RCC) following one prior anti-angiogenic therapy. Indicated in combination with pembrolizumab for the first-line treatment of adult patients with advanced RCC. |
| <b>Hepatocellular Carcinoma</b> Indicated for the first-line treatment of patients with unresectable hepatocellular carcinoma.                                                                                                                                                                      |
| <b>Endometrial Carcinoma</b> Indicated in combination with pembrolizumab, for the treatment of patients with advanced endometrial carcinoma that is not microsatellite instability-high (MSI-H) or mismatch repair deficient (pMMR), who have disease progression following prior                   |

systemic therapy and are not candidates for curative surgery or radiation.

**Other Uses:** The National Cancer Comprehensive Network (NCCN) also recommends Lenvima for the treatment of medullary thyroid carcinoma in patients who have experienced disease progression while on Caprelsa (vandetanib) or Cometriq (cabozantinib), as a systemic therapy for recurrent adenoid cystic carcinoma, and for the treatment of metastatic hepatocellular carcinoma, thymic carcinoma, and cutaneous melanoma.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                  |

| <b>Benefit/Coverage/Program Information</b>                                                                                                                                                                                                                                                                        |
| <b>Background:</b><br><br>Lenvima (lenvatinib) is a kinase inhibitor indicated for the treatment of patients with locally recurrent or metastatic, progressive, radioactive iodine-refractory differentiated thyroid cancer in combination with Afinitor (everolimus), for the treatment of patients with advanced |

renal cell carcinoma (RCC) following one prior anti-angiogenic therapy, in combination with Keytruda (pembrolizumab), for the first-line treatment of patients with advanced RCC, for the first-line treatment of patients with unresectable hepatocellular carcinoma, and in combination with pembrolizumab, for the treatment of patients with advanced endometrial carcinoma that is not microsatellite instability-high (MSI-H) or mismatch repair deficient (pMMR), who have disease progression following prior systemic therapy in any setting and are not candidates for curative surgery or radiation.

In addition, the National Cancer Comprehensive Network (NCCN) also recommends Lenvima for the treatment of medullary thyroid carcinoma in patients who have experienced disease progression while on Caprelsa (vandetanib) or Cometriq (cabozantinib), as a systemic therapy for recurrent adenoid cystic carcinoma, and for the treatment of metastatic hepatocellular carcinoma, thymic carcinoma, and cutaneous melanoma.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Product Name:</b> Leqembi IQLIK [a] |                       |
| Approval Length                        | 12 month(s)           |
| Therapy Stage                          | Initial Authorization |
| Guideline Type                         | Non Formulary         |

### **Approval Criteria**

**1** - ONE of the following [Note: diagnoses based on National Institute on Aging and the Alzheimer's Association (NIA-AA) criteria]:

**1.1** Patient has mild cognitive impairment (MCI) due to Alzheimer's disease

**OR**

**1.2** Patient has mild dementia due to Alzheimer's disease

**OR**

**1.3** BOTH of the following:

- Patient has progressed into moderate or severe stages of dementia due to Alzheimer's disease
- Prescriber attests that the patient has shared in decision-making to continue Leqembi IQLIK therapy

**AND**

**2** - Presence of amyloid beta pathology has been confirmed

**AND**

**3** - Patient has been established on intravenous Leqembi therapy under an active UnitedHealthcare medical benefit prior authorization

**AND**

**4** - BOTH of the following:

**4.1** Submission of medical records (e.g., chart notes) confirming follow-up brain magnetic resonance imaging (MRI) has been completed after the initiation of intravenous Leqembi therapy

**AND**

**4.2** ONE of the following:

**4.2.1** Amyloid-related imaging abnormalities (ARIA) have not been observed on MRI

**OR**

**4.2.2** ALL of the following:

**4.2.2.1** ARIA has been observed on MRI

**AND**

**4.2.2.2** Prescriber attests that continuation of therapy with Leqembi IQLIK is appropriate based on the severity of the patient's clinical symptoms

**AND**

**4.2.2.3** ONE of the following:

- Follow-up MRI demonstrates radiographic resolution and/or stabilization
- Prescriber attests that continuation of therapy with Leqembi IQLIK is appropriate based on the radiographic severity of ARIA

**AND**

**5** - Not used in combination with other A $\beta$  monoclonal antibodies (mAbs) for Alzheimer's Disease (e.g., Kisunla)

**AND**

**6** - Prescribed by a neurologist, geriatric psychiatrist, or geriatrician who specializes in treating dementia

| <p><b>Approval Criteria</b></p> <p><b>1 - ONE</b> of the following [Note: diagnoses based on National Institute on Aging and the Alzheimer's Association (NIA-AA) criteria]:</p> <p><b>1.1</b> Patient has mild cognitive impairment (MCI) due to Alzheimer's disease</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2</b> Patient has mild dementia due to Alzheimer's disease</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.3 BOTH</b> of the following:</p> <ul style="list-style-type: none"> <li>• Patient has progressed into moderate or severe stages of dementia due to Alzheimer's disease</li> <li>• Prescriber attests that the patient has shared in decision-making to continue Leqembi IQLIK therapy</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Not used in combination with other A<math>\beta</math> monoclonal antibodies (mAbs) for Alzheimer's Disease (e.g., Kisunla)</b></p> |                 |

**AND**

**3** - Prescribed by a neurologist, geriatric psychiatrist, or geriatrician who specializes in treating dementia

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

**Background:** Leqembi is an amyloid beta-directed antibody indicated for the treatment of Alzheimer's disease. Treatment with Leqembi should be initiated in patients with mild cognitive impairment or mild dementia stage of disease, the population in which treatment was initiated in clinical trials.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

| <b>Benefit/Coverage/Program Information</b>                                                                                                                                                                   |
| <p><b>Background:</b></p> <p>Leqselvi (deuruxolitinib) is a Janus kinase (JAK) inhibitor indicated for the treatment of adults with severe alopecia areata. Use of Leqselvi in combination with other JAK</p> |

inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

**Additional Clinical Rules:**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

## 1 . Indications

**Drug Name: Subcutaneously (SC) administered leuprolide acetate (Camcevi, Eligard, Lutrate Depot)**

**Advanced prostate cancer** Indicated for the palliative treatment of advanced prostate cancer.

**Central precocious puberty (CPP)** While a depot formulation of leuprolide (Lupron Depot-Ped) is FDA labeled for the treatment of central precocious puberty (CPP), clinical evidence supports the use of daily SC administered leuprolide acetate for the same indication. CPP is defined as early onset of secondary sexual characteristics, generally earlier than 8 years of age in girls and 9 years of age in boys, associated with pubertal pituitary gonadotropin activation. Leuprolide prescribing information states that prior to initiation of treatment, a clinical diagnosis of CPP should be confirmed by blood concentration of luteinizing hormone (LH) (basal or stimulated with a GnRH analog) and assessment of bone age versus chronological age. Once therapy is initiated, CPP patients should be evaluated every 3 to 6 months for pubertal development and growth, and bone age should be measured

radiographically every 6 to 12 months.

**Gender dysphoria** Clinical evidence supporting the use of GnRH analogs for the treatment of gender dysphoria is limited and lacks long-term safety data. Statistically robust randomized controlled trials are needed to address the issue of whether the benefits outweigh the clinical risk in its use.

**Salivary gland tumors and uterine sarcoma** The National Cancer Comprehensive Network (NCCN) recommends leuprolide acetate for the treatment of salivary gland tumors and uterine sarcoma

**Drug Name: Intramuscular (IM) administered leuprolide acetate 22.5 mg injection**

**Advanced prostate cancer** Indicated for the treatment of advanced prostate cancer.

### Approval Criteria

1 - Diagnosis of infertility

**AND**

2 - Used as part of an assisted reproductive technology (ART) protocol

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

\*\*Requests for an infertility related diagnosis other than ovulation induction for members in Iowa, New Jersey, North Carolina, Kansas and Texas should be denied as a benefit exclusion.

Product Name: Eligard, leuprolide acetate inj kit 1 mg/0.2 mL, Lutrate Depot [a]

Diagnosis Salivary Gland Tumors

Approval Length 12 month(s)

Therapy Stage Initial Authorization

Guideline Type Prior Authorization

### Approval Criteria

1 - Diagnosis of salivary gland tumor

**AND**

2 - Disease is ONE of the following:

- Recurrent
- Unresectable
- Metastatic

**AND**

3 - Disease is androgen receptor positive (AR+)

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Coverage Criteria:</b><br><br>These criteria provides parameters for coverage of oncology indications based upon the National Comprehensive Cancer Network (NCCN) Drugs & Biologics Compendium. The Compendium lists the appropriate drugs and biologics for specific cancers using US Food and Drug Administration (FDA)-approved disease indications and specific NCCN panel recommendations. Each recommendation is supported by a level of evidence category. |

UnitedHealthcare recognizes indications and uses of leuprolide acetate listed in the NCCN Drugs and Biologics Compendium with Categories of Evidence and Consensus of 1, 2A, and 2B as proven and Categories of Evidence and Consensus of 3 as unproven.

Clinical evidence supporting the use of GnRH analogs for the treatment of gender dysphoria is limited and lacks long-term safety data. Statistically robust randomized controlled trials are needed to address the issue of whether the benefits outweigh the clinical risk in its use.

Some states mandate benefit coverage for off-label use of medications for some diagnoses or under some circumstances. Some states also mandate usage of other Compendium references. Where such mandates apply, they supersede language in the benefit document or in the notification criteria.

**Additional Clinical Rules:**

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Supply limitations may be in place.

**Background:**

Leuprolide acetate is a synthetic nonapeptide analog of naturally occurring gonadotropin releasing hormone (GnRH) or luteinizing hormone-releasing hormone (LH-RH) which acts as a potent inhibitor of gonadotropin secretion when given continuously in therapeutic doses. Leuprolide acetate is indicated in the palliative treatment of advanced prostatic cancer

Subcutaneously (SC) administered leuprolide acetate (Eligard, Lutrate Depot) is FDA-labeled for the palliative treatment of advanced prostate cancer.[1,2]

Intramuscular (IM) administered leuprolide acetate 22.5 mg injection is FDA-labeled for the treatment of advanced prostate cancer.[18]

In addition to prostate cancer, the National Cancer Comprehensive Network (NCCN) recommends leuprolide acetate for the treatment of salivary gland tumors and uterine sarcoma. [2]

While a depot formulation of leuprolide (Lupron Depot-Ped) is FDA labeled for the treatment of central precocious puberty (CPP),[4] clinical evidence supports the use of daily SC administered leuprolide acetate for the same indication.[5] CPP is defined as early onset of secondary sexual characteristics, generally earlier than 8 years of age in girls and 9 years of

age in boys, associated with pubertal pituitary gonadotropin activation. Leuprolide prescribing information states that prior to initiation of treatment, a clinical diagnosis of CPP should be confirmed by blood concentration of luteinizing hormone (LH) (basal or stimulated with a GnRH analog) and assessment of bone age versus chronological age. [4] Once therapy is initiated, CPP patients should be evaluated every 3 to 6 months for pubertal development and growth, and bone age should be measured radiographically every 6 to 12 months.[5]

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Lidoderm is indicated for the relief of pain associated with post-herpetic neuralgia (PHN). The American Academy of Neurology recommends the use of lidocaine patch as an option for the management of PHN. Evidence also exists in support of using lidocaine patch for non-PHN neuropathies.</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>• Supply limits may be in place</li> </ul> |

### Background

Linzess (linaclotide) is indicated for the treatment of chronic idiopathic constipation and irritable bowel syndrome with constipation in adults aged 18 years and older and for the treatment of functional constipation (FC) in pediatric patients 6 to 17 years of age. Symproic (naldemedine) is an opioid antagonist indicated for the treatment of opioid-induced constipation in adult patients with chronic non-cancer pain including patients with chronic pain related to prior cancer or its treatment who do not require frequent (e.g., weekly) opioid dosage escalation. Physicians and patients should periodically assess the need for continued treatment with these agents.

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background</b>                           |

Litfulo® (ritlecitinib) is an oral kinase inhibitor indicated for the treatment of severe alopecia areata in adults and adolescents 12 years and older. Use of Litfulo in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Livdelzi (seladelpar) is a peroxisome proliferator-activated receptor (PPAR)-delta agonist indicated for the treatment of primary biliary cholangitis (PBC) in combination with ursodeoxycholic acid (UDCA) in adults who have an inadequate response to UDCA, or as monotherapy in patients unable to tolerate UDCA.</p> <p>This indication is approved under accelerated approval based on a reduction of alkaline phosphatase (ALP). Improvement in survival or prevention of liver decompensation events have not been demonstrated. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trial(s).<sup>1</sup></p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>• Supply limits may be in place.</li> <li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> </ul> |

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Livmarli (maralixibat) is an ileal bile acid transporter inhibitor indicated for the treatment of cholestatic pruritis in patients 12 months of age and older with progressive familial intrahepatic cholestasis (PFIC). Livmarli is also indicated for the treatment of cholestatic pruritis in patients 3 months of age and older with Alagille syndrome (ALGS).

Conventional treatments for pruritis associated with PFIC or Alagille syndrome include ursodeoxycholic acid (UCDA), antihistamines (e.g., diphenhydramine), bile acid sequestrants (e.g., cholestyramine), rifampin, naltrexone and sertraline.

#### Limitation of Use:

Livmarli is not recommended in a subgroup of PFIC type 2 patients with specific ABCB11 variants resulting in non-functional or complete absence of bile salt export pump (BSEP) protein.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

## 1 . Indications

|                                                                                  |
|----------------------------------------------------------------------------------|
| <b>Drug Name: Lokelma (sodium zirconium cyclosilicate), Veltassa (patiromer)</b> |
| <b>Hyperkalemia</b> Indicated for the treatment of hyperkalemia.                 |

## 2 . Criteria

|                                            |                       |
|--------------------------------------------|-----------------------|
| <b>Product Name:</b> Lokelma, Veltassa [a] |                       |
| Approval Length                            | 12 month(s)           |
| Therapy Stage                              | Initial Authorization |
| Guideline Type                             | Prior Authorization   |

### Approval Criteria

**1** - Diagnosis of non-life threatening hyperkalemia

**AND**

**2** - Where clinically appropriate, loop or thiazide diuretic therapy for potassium removal has failed

**AND**

**3** - Patient follows a low potassium diet (less than or equal to 3 grams per day)

## 1 . Indications

**Drug Name:** MS Contin (morphine sulfate controlled-release tablets), Duragesic (fentanyl transdermal), Zohydro ER (hydrocodone extended-release), oxymorphone extended-release tablets, morphine sulfate extended-release capsules

**Management of moderate to severe pain** Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

**Drug Name:** Hydromorphone extended-release tablets (generic Exalgo), Hysingla ER (hydrocodone extended-release), Kadian (morphine sulfate sustained-release capsules), Nucynta ER (tapentadol extended-release)

**Management of moderate to severe pain** Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of

time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

**Drug Name: OxyContin (oxycodone controlled-release, includes authorized generic), Xtampza ER (oxycodone extended-release), Dolophine (methadone), tramadol extended release tablets**

**Management of moderate to severe pain** Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

**Drug Name: Conzip (tramadol extended release capsules), levorphanol, methadone 5mg/5mL and 10mg/5mL solution, Methadose (methadone)**

**Management of moderate to severe pain** Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

## 2 . Criteria

Product Name: Brand Hysingla ER, Oxycodone ER tabs, Xtampza ER, generic fentanyl patches, generic methadone tabs/tbso, generic methadone 5mg/5mL and 10mg/5mL soln, Brand Methadose tbso, generic morphine sulfate ER caps/tabs, generic oxymorphone ER, Conzip, Brand Tramadol ER caps, generic tramadol ER tabs, generic hydrocodone ER tabs, generic hydromorphone ER, generic hydrocodone ER caps, Brand MS Contin, Oxycontin, Nucynta ER, generic methadone intensol, generic methadone conc, Brand Methadose conc, generic morphine sulfate CR, generic levorphanol tartrate [a]

|           |                                                               |

### Approval Criteria

1 - ONE of the following:

**1.1** Patient is being treated for cancer related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance)

**OR**

**1.2** Patient is in hospice or is receiving end of life care

**OR**

**1.3** Patient is being treated for pain related to Sickle Cell Disease

**AND**

**2** - If the request is for fentanyl transdermal, hydrocodone extended-release capsules, hydromorphone extended-release tablets (generic Exalgo), morphine sulfate sustained-release capsules (generic Kadian), Nucynta ER (tapentadol extended-release), methadone (generic Dolophine), levorphanol tablets, methadone 5mg/5mL and 10mg/5mL solution, or Methadose (methadone), ONE of the following:

**2.1** The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)\*

**OR**

**2.2** Patient is established on pain therapy with the requested medication for cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance), Sickle Cell Disease related pain, hospice related pain, or end of life care related pain, and the medication is not a new regimen for treatment of cancer-related pain, hospice, or end of life care pain. (Document date regimen was started)

**AND**

**3** - If the request is for oxymorphone extended-release tablets, Hysingla ER (hydrocodone extended-release), OxyContin (oxycodone controlled-release), oxycodone ER (Oxycontin authorized generic), or Xtampza ER (oxycodone extended-release), ONE of the following:

**3.1** The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)\*

**OR**

**3.2** The physician attests the patient has risk factors for substance abuse

**OR**

**3.3** Patient is established on pain therapy with the requested medication for cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance), Sickle Cell Disease related pain, hospice related pain, or end of life care related pain, and the medication is not a new regimen for treatment of cancer-related pain, hospice, or end of life care pain. (Document date regimen was started)

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Approval Criteria**

**1 - The prescriber attests to BOTH of the following:**

- Patient has been screened for substance abuse/opioid dependence
- Pain is moderate to severe and expected to persist for an extended period of time (chronic)

**AND**

**2 - Treatment goals are defined and include estimated duration of treatment (must document treatment goals)**

**AND**

**3 - Patient has been screened for underlying depression and/or anxiety. If applicable, any underlying conditions have been or will be addressed**

**AND**

**4 - ONE of the following:**

**4.1** Prior to the start of therapy with the long-acting opioid, the patient has failed an adequate (minimum of 2 week) trial of a short-acting opioid within the last 30 days (document drug(s), and date of trial), unless the patient is already receiving chronic opioid therapy prior to surgery for postoperative pain, or in the postoperative pain is expected to be moderate to severe and persist for an extended period of time

**OR**

**4.2** Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

**AND**

**5 - If the request is for neuropathic pain (examples of neuropathic pain include neuralgias and neuropathies), ONE of the following:**

**5.1 BOTH of the following:**

**5.1.1** Unless it is contraindicated, the patient has not exhibited an adequate response to 8 weeks of treatment with gabapentin titrated to a therapeutic dose (document date of trial)

**AND**

**5.1.2** Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose (document drug and duration of trial)

**OR**

**5.2** The patient is new to the plan and is currently established on the requested long-acting opioid therapy for at least the past 30 days

**AND**

**6** - If the request is for fentanyl transdermal, hydrocodone extended-release capsules, hydromorphone extended-release tablets (generic Exalgo), morphine sulfate sustained-release capsules (generic Kadian), Nucynta ER (tapentadol extended-release), methadone (generic Dolophine), levorphanol, methadone 5mg/5mL and 10mg/5mL solution, or Methadose (methadone), the patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)\*

**AND**

**7** - If the request is for oxymorphone extended-release tablets, Hysingla ER (hydrocodone extended-release), OxyContin (oxycodone controlled-release), oxycodone ER (Oxycontin authorized generic), Xtampza ER (oxycodone extended-release), ONE of the following:

**7.1** The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)\*

**OR**

**7.2** The physician attests the patient has risk factors for substance abuse

Notes

- Pain is moderate to severe and expected to persist for an extended period of time (chronic)

**AND**

**4** - If the request is for fentanyl transdermal, hydrocodone extended-release capsules, hydromorphone extended-release tablets (generic Exalgo), morphine sulfate sustained-release capsules (generic Kadian), Nucynta ER (tapentadol extended-release), methadone (generic Dolophine), levorphanol, methadone 5mg/5mL and 10mg/5mL solution, or Methadose (methadone), the patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)\*

**AND**

**5** - If the request is for oxymorphone extended-release tablets, Hysingla ER (hydrocodone extended-release), OxyContin (oxycodone controlled-release), oxycodone ER (Oxycontin authorized generic), or Xtampza ER (oxycodone extended-release), ONE of the following:

**5.1** The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)\*

**OR**

**5.2** The physician attests the patient has risk factors for substance abuse

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.  
If the patient is currently taking the requested long-acting opioid for at least 30 days and does not meet the medical necessity authorization criteria requirements for long-acting opioids, a denial should be issued and a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quantity for transition to an alternative treatment.  
\*morphine sulfate ER (generic MS Contin) may require prior authorization.

### 3 . Background

## Benefit/Coverage/Program Information

### Background:

Long-acting opioid analgesics are indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic

Long-acting opioids are not indicated for pain in the immediate postoperative period (the first 12-24 hours following surgery), or if the pain is mild, or not expected to persist for an extended period of time. They are only indicated for postoperative use if the patient is already receiving the drug prior to surgery or if the postoperative pain is expected to be moderate to severe and persist for an extended period of time. Physicians should individualize treatment, moving from parenteral to oral analgesics as appropriate.

Long-acting opioids should not be used in treatment naïve patients. Physicians should individualize treatment in every case, initiating therapy at the appropriate point along a progression from non-opioid analgesics, such as non-steroidal anti-inflammatory drugs and acetaminophen to opioids in a plan of pain management.

UnitedHealthcare employs opioid safety edits at point-of-sale (POS) to prompt prescribers and pharmacists to conduct additional safety reviews to determine if the member's opioid use is appropriate and medically necessary. Development of opioid safety edit specifications, to include cumulative MME thresholds, are determined by the plan taking into consideration clinical guidelines, regulatory/state requirements, utilization and P&T Committee feedback.

### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Background:</b><br><br>Lonsurf (trifluridine/tipiracil) is a combination of trifluridine, a nucleoside metabolic inhibitor, and tipiracil, a thymidine phosphorylase inhibitor, indicated for the treatment of adult patients with: <ul style="list-style-type: none"> <li>Metastatic colorectal cancer as a single agent or in combination with bevacizumab who have been previously treated with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, an anti-VEGF biological therapy, and if RAS wild-type, an anti-EGFR therapy.</li> <li>Metastatic gastric or gastroesophageal junction adenocarcinoma previously treated with at least two prior lines of chemotherapy that included a fluoropyrimidine, a</li> </ul> |

platinum, either a taxane or irinotecan, and if appropriate, HER2/neu-targeted therapy.

In addition, the National Cancer Comprehensive Network (NCCN) also recommends the use of colon, appendiceal, or rectal cancer as second-line and subsequent therapy as a single agent, or in combination with bevacizumab (preferred), for advanced or metastatic disease (proficient mismatch repair/microsatellite-stable [pMMR/MSS], or ineligible for, or progressed on, checkpoint inhibitor immunotherapy for deficient mismatch repair/microsatellite instability-high [dMMR/MSI-H] or polymerase epsilon/delta [POLE/POLD1] mutation not previously treated with Lonsurf in patients who have progressed through all available regimens besides Fruzaqla, Stivarga, or Lonsurf with or without bevacizumab.

**Additional Clinical Programs:**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Background:</b><br><br>Lorbrena (lorlatinib) is a kinase inhibitor indicated for the treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC). |

In addition, the National Cancer Comprehensive Network (NCCN) recommends Lorbrena for the treatment of patients with ALK-positive recurrent and advanced NSCLC and in patients with ROS1 rearrangement positive recurrent, advanced, or metastatic NSCLC.

The use of Lorbrena is also recommended by the NCCN for the treatment of Erdheim-Chester Disease (ECD) with symptomatic or relapsed/refractory disease, treatment of advanced, recurrent/metastatic, or inoperable uterine sarcoma, treatment of limited and extensive brain metastases in patients with ALK rearrangement-positive NSCLC, treatment of inflammatory myofibroblastic tumor (IMT) with ALK translocation, and treatment of relapsed or refractory ALK-positive peripheral T-Cell and large B-Cell lymphoma.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Lovaza (omega-3-acid ethyl esters)</b>                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Severe Hypertriglyceridemia</b> Indicated as adjunctive therapy to diet and exercise to reduce triglyceride (TG) levels in adult patients with severe ( $\geq 500$ mg/dL) hypertriglyceridemia.                                                                                                                                                                                                                                                  |
| <b>Drug Name: Vascepa (icosapent ethyl)</b>                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Cardiovascular Risk Reduction</b> Indicated as an adjunct to maximally tolerated statin therapy to reduce the risk of myocardial infarction, stroke, coronary revascularization, and unstable angina requiring hospitalization in adult patients with elevated triglyceride (TG) levels ( $\geq 150$ mg/dL) and either established cardiovascular disease or diabetes mellitus and 2 or more additional risk factors for cardiovascular disease. |
| <b>Severe Hypertriglyceridemia</b> Indicated as adjunctive therapy to diet and exercise to reduce triglyceride (TG) levels in adult patients with severe ( $\geq 500$ mg/dL) hypertriglyceridemia.                                                                                                                                                                                                                                                  |

## 2 . Criteria

|                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                 |

| Diagnosis       | Cardiovascular Risk Reduction |
| Approval Length | 12 month(s)                   |
| Therapy Stage   | Initial Authorization         |
| Guideline Type  | Prior Authorization           |

**Approval Criteria**

**1 - Diagnosis of hypertriglyceridemia (pre-treatment triglyceride level of greater than or equal to 150 mg/dL)**

**AND**

**2 - Patient currently has or is considered high or very high risk for cardiovascular disease (CVD) as evidenced by ONE of the following:**

**2.1 BOTH of the following:**

**2.1.1 Age is greater than or equal to 45**

**AND**

**2.1.2 Established CVD confirmed by ONE of the following:**

- Acute coronary syndrome

- History of myocardial infarction
- Stable or unstable angina
- Coronary or other arterial revascularization
- Stroke
- Transient ischemic attack
- Peripheral arterial disease

**OR**

**2.2** ALL of the following:

**2.2.1** Diagnosis of Type 2 diabetes

**AND**

**2.2.2** TWO of the following risk factors for developing cardiovascular disease:

- Men greater than or equal to 55 years and women greater than or equal to 65 years
- Cigarette smoker or stopped smoking within the past 3 months
- Hypertension (pretreatment blood pressure greater than or equal to 140 mmHg systolic or greater than or equal to 90 mmHg diastolic)
- HDL-C less than or equal to 40 mg/dL for men or less than or equal to 50 mg/dL for women
- High-sensitivity C-reactive protein greater than 3.0 mg/L
- Creatinine clearance greater than 30 and less than 60 mL/min
- Retinopathy
- Micro- or macro-albuminuria
- Ankle-brachial index (ABI) less than 0.9 without symptoms of intermittent claudication

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration):

**3.1** Patient has been receiving at least 12 consecutive weeks of high- intensity statin therapy (i.e. atorvastatin 40-80 mg, rosuvastatin 20-40 mg) and will continue to receive a high-intensity statin at maximally tolerated dose

**OR**

**3.2 BOTH of the following:**

**3.2.1** Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms:

- Myalgia (muscle symptoms without CK elevations)
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

**AND**

**3.2.2** Patient has been receiving at least 12 consecutive weeks of low-intensity or moderate-intensity statin therapy [i.e. atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin  $\geq$  10 mg, pravastatin  $\geq$  10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40mg twice daily or Livalo (pitavastatin)  $\geq$  1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose

**AND**

**4 -** Submission of medical record (e.g., chart notes, laboratory values) documenting ONE of the following (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration):

- Patient has been receiving at least 12 consecutive weeks of ezetimibe (Zetia®) therapy as adjunct to maximally tolerated statin therapy
- Patient has a history of contraindication or intolerance to ezetimibe
- Patient has a LDL-C less than 100 mg/dL while on maximally tolerated statin therapy

**AND**

**5 -** Used as an adjunct to a low-fat diet and exercise

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Lovaza (omega-3-acid ethyl esters) and Vascepa are indicated as adjunctive therapy to diet and exercise to reduce triglyceride (TG) levels in adult patients with severe (greater than or equal to 500 mg/dL) hypertriglyceridemia. Vascepa is also indicated as an adjunct to maximally tolerated statin therapy to reduce the risk of myocardial infarction, stroke, coronary revascularization, and unstable angina requiring</p> |

hospitalization in adult patients with elevated triglyceride (TG) levels (greater than or equal to 150 mg/dL) and either established cardiovascular disease or diabetes mellitus and 2 or more additional risk factors for cardiovascular disease.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Drug Name: Lynparza (olaparib)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Adjuvant Treatment of Germline BRCA-mutated HER2-negative High Risk Early Breast Cancer</b> Indicated for the adjuvant treatment of adult patients with deleterious or suspected deleterious gBRCAm human epidermal growth factor receptor 2 (HER2)-negative high risk early breast cancer who have been treated with neoadjuvant or adjuvant chemotherapy.                                                                                                                    |
| <b>Germline BRCA-mutated HER2-negative Metastatic Breast Cancer</b> Indicated for the treatment of adult patients with deleterious or suspected deleterious gBRCAm, HER2-negative metastatic breast cancer, who have been treated with chemotherapy in the neoadjuvant, adjuvant, or metastatic setting. Patients with hormone receptor (HR)-positive breast cancer should have been treated with a prior endocrine therapy or be considered inappropriate for endocrine therapy. |
| <b>First-Line Maintenance Treatment of BRCA-mutated Advanced Ovarian Cancer</b> Indicated for the maintenance treatment of adult patients with deleterious or suspected deleterious germline or somatic BRCA-mutated advanced epithelial ovarian, fallopian tube or                                                                                                                                                                                                               |

primary peritoneal cancer who are in complete or partial response to first-line platinum-based chemotherapy.

**First-line Maintenance Treatment of HRD-positive Advanced Ovarian Cancer in Combination with Bevacizumab** Indicated in combination with bevacizumab for the maintenance treatment of adult patients with advanced epithelial ovarian, fallopian tube or primary peritoneal cancer who are in complete or partial response to first-line platinum-based chemotherapy and whose cancer is associated with homologous recombination deficiency (HRD)-positive status defined by either: • a deleterious or suspected deleterious BRCA mutation, and/or • genomic instability.

**Maintenance Treatment of BRCA-mutated Recurrent Ovarian Cancer** Indicated for the maintenance treatment of adult patients with deleterious or suspected deleterious gBRCAm or sBRCAm recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer, who are in complete or partial response to platinum-based chemotherapy.

**HRR Gene-mutated Metastatic Castration-Resistant Prostate Cancer** Indicated for the treatment of adult patients with deleterious or suspected deleterious germline or somatic homologous recombination repair (HRR) gene-mutated metastatic castration-resistant prostate cancer (mCRPC) who have progressed following prior treatment with enzalutamide or abiraterone.

**Treatment of BRCA-mutated Metastatic Castration-Resistant Prostate Cancer in Combination with Abiraterone and Prednisone or Prednisolone** Indicated in combination with abiraterone and prednisone or prednisolone for the treatment of adult patients with deleterious or suspected deleterious BRCA-mutated (BRCAm) metastatic castration-resistant prostate cancer (mCRPC).

**AND**

**2** - Presence of deleterious or suspected deleterious germline BRCA-mutations (gBRCAm)

**AND**

**3** - Disease is human growth factor receptor 2 (HER2)-negative

**AND**

**4** - ONE of the following:

**4.1** Patient is hormone receptor (HR) negative

**OR**

**4.2** BOTH of the following:

- Patient is hormone receptor (HR) positive
- Patient is continuing concurrent treatment with endocrine therapy

**AND**

**5** - Patient has been treated with neoadjuvant or adjuvant chemotherapy

**AND**

**6** - Treatment duration has not exceeded 12 months of therapy

Notes

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Lynparza (olaparib) is a poly (ADP-ribose) polymerase (PARP) inhibitor indicated for the maintenance treatment of adult patients with deleterious or suspected deleterious germline or somatic *BRCA*-mutated (g*BRCA*m or s*BRCA*m) advanced epithelial ovarian, fallopian tube or primary peritoneal cancer who are in complete or partial response to first-line platinum-based chemotherapy. Lynparza is also indicated for the maintenance treatment of adult patients with deleterious or suspected deleterious g*BRCA*m or s*BRCA*m recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer, who are in complete or partial response to platinum-based chemotherapy. Lynparza is also indicated in combination with bevacizumab for the maintenance treatment of adult patients with advanced epithelial ovarian, fallopian tube, or primary peritoneal cancer who are in complete or partial response to first-line platinum-based chemotherapy and whose cancer is associated with homologous recombination deficiency (HRD)-positive status defined by either: a deleterious or suspected deleterious *BRCA* mutation or genomic instability.

Lynparza is also indicated in patients with deleterious or suspected deleterious g*BRCA*m, human epidermal growth factor receptor 2 (HER2)-negative high risk early, or metastatic breast cancer who have been treated with chemotherapy in the neoadjuvant, adjuvant or, in the setting of metastatic breast cancer, the metastatic setting. Patients with hormone receptor (HR)-positive breast cancer should have been treated with a prior endocrine therapy or be considered inappropriate for endocrine treatment. The National Comprehensive Cancer Network (NCCN) also recommends Lynparza therapy in patients with deleterious or suspected deleterious g*BRCA*m human epidermal growth factor receptor 2 (HER2)-positive recurrent unresectable or metastatic breast cancer. Patients with high risk early breast cancer should continue treatment for a total of 1 year, or until disease recurrence, or unacceptable toxicity, whichever occurs first.

Lynparza is indicated for the treatment of adult patients with deleterious or suspected deleterious germline or somatic homologous recombination repair (HRR) gene-mutated metastatic castration-resistant prostate cancer (mCRPC) who have progressed following prior treatment with enzalutamide or abiraterone. Lynparza is also indicated in combination with abiraterone and prednisone or prednisolone for the treatment of adult patients with deleterious or suspected deleterious *BRCA*-mutated (BRCAm) mCRPC.

Patients receiving Lynparza for mCRPC should also receive a gonadotropin-releasing hormone (GnRH) analog concurrently or should have had a bilateral orchiectomy.

Lynparza is indicated for the maintenance treatment of adult patients with deleterious or suspected deleterious *gBRCA*m metastatic pancreatic adenocarcinoma whose disease has not progressed on at least 16 weeks of a first-line platinum-based chemotherapy regimen.

The NCCN also recommends Lynparza therapy in patients with uterine sarcoma as single-agent second-line therapy.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**1 - Being used as part of disease or disorder specific treatment**

**AND**

**2 - Requested product has been proven effective for the patient's specific disease or disorder. This includes, but is not limited to:**

**2.1** Inherited diseases of amino acid and/or organic acid metabolism (e.g., glutaric aciduria type I, vitamin B6-nonresponsive homocystinuria or hypermethioninemia, hyperlysinemia, histidinemia, disorder of leucine catabolism, PKU, maternal PKU, branched chain ketonuria/MSUD, propionic or methylmalonic acidemia, tyrosinemia types I, II, or III)

**OR**

**2.2** Patients who require a formula modified in carbohydrate, fat, and/or increased protein (e.g. abetalipoproteinemia; cholestasis; chylothorax; fatty acid oxidation defects; galactosemia, glutaric acidemia type II; hyperlipoproteinemia type I (fasting chylomicronemia); hypobetalipoproteinemia; lymphangiectasis, intestinal malabsorption of carbohydrate and/or fat; supplement for any patient who requires increased protein, minerals, and vitamins; X-linked adrenoleukodystrophy)

**OR**

**2.3** Hypercalcemia, as may occur in infants with Williams syndrome, osteopetrosis, and primary neonatal hyperparathyroidism

**OR**

**2.4** Urea cycle disorder, gyrate atrophy of the choroid and retina, or HHH syndrome

**OR**

**2.5** Infants or children who cannot tolerate intact or hydrolyzed protein, or unable to tolerate the type or amount of carbohydrate in milk or infant formulas

**OR**

**2.6** Infants or children with severe food or protein allergies

**OR**

**2.7** Immunoglobulin E and non-immunoglobulin E-mediated allergies to multiple food proteins

**OR**

**2.8** Severe food protein induced enterocolitis syndrome

**OR**

**2.9** Eosinophilic disorders

**OR**

**2.10** Chronic intestinal pseudo-obstruction

**OR**

**2.11** Impaired absorption of nutrients caused by disorders affecting the absorptive surface, function, length, and motility of the gastrointestinal tract (e.g., Crohn's disease, ulcerative colitis, gastroesophageal reflux)

**OR**

**2.12** BOTH of the following:

- Multiple food protein intolerance
- The child has not been responsive to trials of standard non-cow milk-based formulas, including soybean and goat milk.

| <b>Drug Name: Mekinist (trametinib)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p><b>Melanoma</b> Indicated, as a single agent in BRAF-inhibitor treatment-naïve patients or in combination with dabrafenib, for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E or V600K mutations. Mekinist is also indicated, in combination with dabrafenib, for the adjuvant treatment of patients with melanoma with BRAF V600E or V600K mutations and involvement of lymph node(s) following complete resection.</p> <p><b>Non-small cell lung cancer</b> Indicated, in combination with dabrafenib, for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation.</p> <p><b>Anaplastic thyroid cancer</b> Indicated, in combination with dabrafenib, for the treatment of patients with locally advanced or metastatic anaplastic thyroid cancer (ATC) with BRAF V600E mutation and with no satisfactory locoregional treatment options.</p> <p><b>Solid Tumors</b> Indicated for the treatment of adult and pediatric patients 1 year of age and</p> |

older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options.

**BRAF V600E Mutation-Positive Low-Grade Glioma** Indicated, in combination with Tafenlar, for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy

**Other Uses:** The National Comprehensive Cancer Network (NCCN) also recommends use of Mekinist in combination with Tafenlar for the adjuvant treatment of anaplastic thyroid cancer with BRAF V600E mutations following resection; for the treatment of follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation; for the treatment of central nervous system (CNS) cancer in patients with melanoma or infiltrative supratentorial astrocytoma/oligodendroglioma; distant metastatic uveal melanoma; epithelial ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease, recurrence in BRAF V600E positive tumors, or recurrence of low-grade serous carcinoma; pancreatic and ampullary adenocarcinomas if BRAF V600E mutation positive; and BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers.

| <p><b>Background:</b></p> <p>Mekinist (trametinib) is a kinase inhibitor indicated as a single agent or in combination with Tafenlar (dabrafenib) for treatment of patients with unresectable or metastatic melanoma with BRAF V600E or BRAF V600K mutations as detected by an FDA-approved test. It is also indicated in combination with Tafenlar for the treatment of metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation as detected by an FDA approved test, for the adjuvant treatment of melanoma with BRAF V600E or BRAF V600K mutations, as detected by an FDA-approved test, involving the lymph nodes following resection, and for the treatment of locally advanced or metastatic anaplastic thyroid cancer with BRAF V600E mutation with no satisfactory locoregional treatment options, and for the treatment of adult and pediatric patients 6 years of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options. The latter indication is approved under accelerated approval based on overall response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial(s). [1] Mekinist, in combination with Tafenlar, is also indicated for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy.</p> <p>The National Comprehensive Cancer Network (NCCN) also recommends use of Mekinist in combination with Tafenlar for the adjuvant treatment of anaplastic thyroid cancer with BRAF V600E mutations following resection; for the treatment of follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation; for the treatment of central nervous system (CNS) cancer in patients with melanoma or infiltrative supratentorial astrocytoma/oligodendroglioma; distant metastatic uveal melanoma; epithelial ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease, recurrence in BRAF V600E positive tumors, or recurrence of low-grade serous carcinoma; pancreatic and</p> |

ampullary adenocarcinomas if BRAF V600E mutation positive; and BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers. [2]

Information on FDA-approved tests for the detection of BRAFV600 mutations in melanoma may be found at: <http://www.fda.gov/CompanionDiagnostics>

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>The body produces two types of gonadotropins, follicle-stimulating hormone (FSH) and luteinizing hormone (LH), both of which play a role in fertility and human reproduction. After they are produced by the pituitary gland, gonadotropins trigger production of other sex hormones which then promote production of egg and sperm. Gonadotropins include hMG (human menopausal gonadotropin –Menopur) and follicle stimulating hormone. Gonadotropins are used in the treatment of infertility, a disease of the reproductive system defined as one of the following:</p> <ul style="list-style-type: none"> <li>• inability to achieve a successful pregnancy due to an individual's medical, sexual, or reproductive history;</li> <li>• failure to achieve a pregnancy after 12 months or more of regular unprotected sexual intercourse when the female partner is less than 35 years;</li> <li>• failure to achieve a pregnancy after 6 months or more of regular unprotected sexual intercourse when the female partner is 35 years or older</li> </ul> <p>Menopur (menotropins) is indicated for the development of multiple follicles and pregnancy in ovulatory women participating in an assisted reproductive technology (ART) program. hMG is used for the treatment of ovulation induction in women with ovulatory dysfunction including polycystic ovary syndrome (PCOS) who failed on clomiphene as well as for ovulation induction in the setting of hypogonadotropic hypogonadism. hMG is also used for induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism in whom the cause of infertility is not due to primary testicular failure.</p> <p>The clinically appropriate dosing for hMG agents when used in an ART cycle without an FSH product is 450 IU/day or less for not more than 14 days of treatment. When used as part of a mixed stimulation protocol (hMG + FSH) or when used alone for ovulation induction or</p> |

controlled ovarian stimulation the clinically appropriate maximum dosing for hMG agents is 225 IU/day and 150 IU/day respectively. Exceeding this daily dose and duration of treatment has not been proven to be efficacious in terms of pregnancy outcome.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

Effective January 3, 2023, the Risk Evaluation and Mitigation Strategy (REMS) program for Mifeprex (mifepristone) was revised to allow the product to be dispensed by certified retail and mail order pharmacies. Previously, this product was only available when ordered, prescribed, and dispensed by or under the supervision of a healthcare provider.

These products are standardly covered without prior authorization. The purpose of this program is to determine coverage of Mifeprex 200mg and mifepristone (generic Mifeprex) 200mg when variations to our standard are present in plan benefit documents (e.g., required by state mandate, etc.). The Hyde amendment prohibits federal funding for most abortions with the exception of abortion of pregnancies that are the result of rape, incest, or where the life of the mother is at risk. [1]

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

| Product Name:Miplyffa [a] |                 |
| Approval Length           | 12 month(s)     |
| Therapy Stage             | Reauthorization |
| Guideline Type            | Non Formulary   |

### Approval Criteria

1 - Documentation of positive clinical response to Miplyffa therapy (e.g., slowed disease progression from baseline based on assessment with NPC–specific scales)

**AND**

2 - Miplyffa continues to be prescribed in combination with miglustat

**AND**

3 - Patient is not receiving Miplyffa in combination with Aqneursa (levacetylleucine)

**AND**

4 - Miplyffa is prescribed by or in consultation with a provider with expertise in the treatment of NPC

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Miplyffa (arimoclomol) is indicated for use in combination with miglustat for the treatment of neurological manifestations of Niemann-Pick disease type C (NPC) in adult and pediatric patients 2 years of age and older.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Aubagio (teriflunomide), Avonex (interferon  $\beta$ -1a), Bafiertam (monomethyl fumarate), Betaseron (interferon  $\beta$ -1b), Copaxone (glatiramer acetate), Extavia (interferon  $\beta$ -1b), Glatopa (glatiramer acetate), Kesimpta (ofatumumab), Mayzent (siponimod), Plegridy (Peginterferon Beta-1a), Ponvory (ponesimod), Rebif (interferon  $\beta$ -1a), Tecfidera (dimethyl fumarate), and Vumerity (diroximel fumarate) are indicated for the treatment of relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults. [1-3, 5, 6]

Mavenclad (cladribine) is indicated for the treatment of relapsing forms of multiple sclerosis, including relapsing-remitting (RRMS) and active secondary progressive disease in adults who have had inadequate response or are intolerant to other therapies for multiple sclerosis. Mavenclad is also indicated for the treatment of active hairy cell leukemia as defined by clinically significant anemia, neutropenia, thrombocytopenia, or disease-related symptoms.

Gilenya (fingolimod) is indicated for the treatment of patients with relapsing forms of multiple sclerosis, to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in patients 10 years of age and older. [4] Tascenso ODT™ (fingolimod) is indicated for the treatment of relapsing forms of multiple sclerosis, to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in pediatric patients 10 years of age and older. [16] Due to the risk of a decrease in heart rate and/or atrioventricular conduction after the first dose of Gilenya, all patients should be observed for signs and symptoms of bradycardia for at least 6 hours after their first dose. First-dose monitoring should also be performed when restarting Gilenya after discontinuation for more than 14 days and with dose increases. Novartis, the manufacturer of Gilenya, provides a First-Dose Observation program at no cost to the patient through the GILENYA Go Program. To find a first-dose observation center, visit <http://www.gilenya.com/c/ms-pill/first-day>

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Approval Length         | 12 month(s)         |
| Guideline Type          | Prior Authorization |

### Approval Criteria

1 - ALL of the following criteria:

1.1 Diagnosis of a history of ONE of the following:

- Paroxysmal atrial fibrillation (AF)
- Persistent AF defined as AF less than 6 months duration

**AND**

1.2 ONE of the following:

- Patient is in sinus rhythm
- Patient is planned to undergo cardioversion to sinus rhythm

**AND**

1.3 Patient has NONE of the following:

- NYHA Class IV heart failure
- Symptomatic heart failure with recent decompensation requiring hospitalization

**OR**

2 - For continuation of current therapy

|       |                                                                                                                                                                                                                 |

## 3 . Background

### Benefit/Coverage/Program Information

**Background:**

Multaq is an antiarrhythmic drug indicated to reduce the risk of hospitalization for atrial fibrillation in patients in sinus rhythm with a history of paroxysmal or persistent atrial fibrillation.

Multaq carries a black box warning for increased risk of death, stroke, and heart failure in patients with decompensated heart failure or permanent atrial fibrillation. It is contraindicated in patients with symptomatic heart failure with recent decompensation requiring hospitalization or NYHA Class IV heart failure, as Multaq doubles the risk of death in these patients. Multaq is also contraindicated in patients in atrial fibrillation who will not or cannot be cardioverted into normal sinus rhythm. In patients with permanent atrial fibrillation, Multaq doubles the risk of death, stroke and hospitalization for heart failure.

Patients currently on Multaq therapy will be allowed to remain on therapy.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>Supply limits may be in place.</li> </ul> |

### Background:

Myalept (metreleptin) is a leptin analog indicated as an adjunct to diet as replacement therapy to treat the complications of leptin deficiency in patients with congenital or acquired generalized lipodystrophy.

#### Limitations of Use:

- The safety and effectiveness of Myalept for the treatment of complications of partial lipodystrophy have not been established.
- The safety and effectiveness of Myalept for the treatment of liver disease, including nonalcoholic steatohepatitis (NASH), have not been established.
- Myalept is not indicated for use in patients with HIV-related lipodystrophy.
- Myalept is not indicated for use in patients with metabolic disease, without concurrent evidence of generalized lipodystrophy.

Myalept is available only through a restricted distribution program under a Risk Evaluation and Mitigation Strategy (REMS), called the Myalept REMS program, because of the risks associated with the development of anti-metreleptin antibodies that neutralize endogenous leptin and the risk of lymphoma.

| Diagnosis       | Atopic Dermatitis     |
| Approval Length | 12 month(s)           |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Non Formulary         |

## Approval Criteria

**1** - Diagnosis of moderate-to-severe chronic atopic dermatitis

**AND**

**2** - ONE of the following:

**2.1** History of inadequate response, contraindication or intolerance to BOTH of the following therapeutic classes of topical therapies^ (document drug, date of trial, and/or contraindication to medication):

- One medium, high or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of atopic dermatitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Adbry (tralokinumab-ldrm), Cibinqo (abrocitinib), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Opzelura (ruxolitinib), Rinvoq (upadacitinib)].

**AND**

**3** - ONE of the following:

**3.1** History of failure, contraindication, or intolerance to BOTH of the following preferred products (document drug, date, and duration of trial):

- Dupixent (dupilumab)

- Rinvoq (upadacitinib)

**OR**

**3.2** Patient is currently on Nemluvio therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

**AND**

**4** - Nemluvio will be used in combination with a topical corticosteroid and/or topical calcineurin inhibitor

**AND**

**5** - Patient is NOT receiving Nemluvio in combination with either of the following:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupxient (dupilumab), Ebglyss (lebrikizumab-lbkz)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

**6** - Prescribed by, or in consultation with, ONE of the following:

- Dermatologist
- Allergist
- Immunologist

### **Benefit/Coverage/Program Information**

#### **Background:**

Nemluvio is an interleukin-31 receptor alpha antagonist indicated for the treatment of adults with prurigo nodularis and for the treatment of adults and pediatric patients 12 years of age and older with moderate-to-severe atopic dermatitis in combination with topical corticosteroids and/or calcineurin inhibitors when the disease is not adequately controlled with topical prescription therapies.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limitations may be in place

| Approval Length                                                              | Authorization for cancer-related pain, end of life, palliative care, or sickle cell pain will be issued for 12 months. All other approvals will be issued for the requested duration, not to exceed one month.    |
| Guideline Type                                                               | Administrative                                                                                                                                                                                                    |
|                                                                              |                                                                                                                                                                                                                   |

## Approval Criteria

1 - Opioid naïve members (defined as not having filled an opioid in the past 60 days) may receive greater than the supply limit based on the following:

1.1 If the request is for greater than the supply limit ONE of the following:

- Cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance)
- End of life care, including hospice care
- Palliative care
- Sickle cell anemia
- Long term care
- A written or verbal statement is received from the requesting prescriber saying that it is medically necessary for the patient to take the opioid drug for more than 7 days

Notes

NOTE: This section applies to all formulary and non-formulary medications

| Guideline Type  | Administrative                                                                                   |

## Approval Criteria

1 - Doses exceeding the cumulative morphine mg equivalent (MME) of 90 mg will be approved up to the requested amount for all opioid products if one of the following conditions is met:

- Cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance)
- End of life diagnosis, including hospice
- Sickle cell anemia diagnosis
- Long-term care
- Palliative care

Notes

^The authorization should be entered for an MME of 99999.99 so as to prevent future disruptions in therapy if the patient's dose is increase

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**Approval Criteria**

1 - Diagnosis of hepatocellular carcinoma

**AND**

2 - ONE of the following:

- Disease is unresectable
- Used as subsequent-line therapy

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Brand Nexavar, generic sorafenib [a]

Diagnosis Hepatocellular Carcinoma

Approval Length 12 month(s)

Therapy Stage Reauthorization

Guideline Type Prior Authorization

**Approval Criteria**

1 - Patient does not show evidence of progressive disease while on Nexavar therapy

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Brand Nexavar, generic sorafenib [a]

Diagnosis Thyroid Cancer

Approval Length 12 month(s)

| Date     | Notes                                                                                                                                                                                                                                                                                                                                                                           |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9/4/2025 | Annual review. Updated criteria for renal cell carcinoma per FDA label. Updated hepatocellular carcinoma, thyroid cancer, soft tissue sarcoma, acute myeloid leukemia, salivary gland tumor, and myeloid/lymphoid neoplasms based on NCCN recommendations. Moved gastrointestinal stromal tumors out of soft tissue sarcoma into its own section and updated per NCCN guidance. |

|---------------------------|-----------------|
| Product Name:Nocdurna [a] |                 |
| Approval Length           | 12 month(s)     |
| Therapy Stage             | Reauthorization |
| Guideline Type            | Non Formulary   |

### Approval Criteria

1 - Documentation of positive clinical response to Nocdurna therapy

**AND**

2 - Patient has routine monitoring for serum sodium levels

**AND**

3 - Prescriber attests that the risks of hyponatremia have been assessed and benefits outweigh the risks

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background

Nocdurna (desmopressin acetate) sublingual tablets are indicated for the treatment of nocturia due to nocturnal polyuria in adults who awaken at least 2 times per night to void. In clinical trials, nocturnal polyuria was defined as nighttime urine production exceeding one-third of the 24-hour urine production. Prior to initiating treatment with Nocdurna, patients should be evaluated for possible causes of nocturia and to optimize the treatment of underlying conditions that may be contributing to the nocturia.

Desmopressin should be avoided in older adults (those 65 or older) due to the risk of hyponatremia. This medication is included in the American Geriatrics Society Beers Criteria. Nocdurna have a Black Box Warning for hyponatremia listed in the FDA prescribing information. Nocdurna use is contraindicated in patients with hyponatremia or a history of hyponatremia, SIADH, eGFR <50 mL/min/1.7m<sup>2</sup>, uncontrolled hypertension, and New York

Heart Association Class II – IV congestive heart failure. See package insert for full listing of contraindications and safety warnings.

This prior authorization program is intended to ensure appropriate prescribing of Nocdurna prior to initiating therapy.

#### **Additional Clinical Rules**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|--------------------------------------------------------------------------------|----------------|
| Product Name:Non-Formulary Medications (other than contraceptive products) [a] |                |
| Approval Length                                                                | 12 month(s)    |
| Guideline Type                                                                 | Administrative |
| <b>Approval Criteria</b>                                                       |                |

**1** - In the absence of a drug-specific non-formulary guideline that has been approved by the P&T Committee to guide the non-formulary exceptions process, the following guideline will be used to establish medical necessity:

**1.1** One of the following:

**1.1.1** Both of the following:

**1.1.1.1** Requested drug is FDA-approved for the condition being treated

**AND**

**1.1.1.2** Additional requirements listed in the "Indications and Usage" sections of the prescribing information (or package insert) have been met (e.g.: first line therapies have been tried and failed, any testing requirements have been met, etc.)

**OR**

**1.1.2** Meets Off-Label Administrative guideline criteria

**AND**

**1.2** One of the following:

**1.2.1** If the target drug is NOT listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why a maximum of five (5) equivalent formulary drugs, as determined by the PA pharmacist are not appropriate

**OR**

**1.2.2** If the target drug is listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why the number of alternatives\* specified by the Non-Formulary Alternatives Table is not appropriate (see technician note for NF Alts Table URL)

**OR**

**1.2.3** No formulary drug is appropriate to treat the patient's condition\*\*

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

|                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Administrative |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - In the absence of a drug-specific non-formulary guideline that has been approved by the P&amp;T Committee to guide the non-formulary exceptions process, the following guideline will be used to establish medical necessity:</p> <p><b>1.1</b> One of the following:</p> <p><b>1.1.1</b> Both of the following [a]:</p> <p><b>1.1.1.1</b> Diagnosis of contraception</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.1.1.2</b> One of the following:</p> |                |

- If the contraceptive drug is NOT listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why a maximum of two (2) equivalent formulary drugs, as determined by the PA pharmacist are not appropriate
- If the contraceptive drug is listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why two (2) alternatives\* specified by the Non-Formulary Alternatives Table is not appropriate (see technician note for NF Alts Table URL)
- Provider attests the non-formulary contraceptive drug is the preferred product for this patient (e.g., provider attestation that the non-formulary contraceptive is medically necessary, patient is stable on the requested non-formulary contraceptive, patient requires continuation of therapy to complete the course of treatment, transition to another agent could result in destabilization)

**OR**

**1.1.2** All of the following [b]:

**1.1.2.1** Drug is requested for a non-contraception use

**AND**

**1.1.2.2** One of the following:

- Requested drug is FDA-approved for the condition being treated
- Meets Off-Label Administrative guideline criteria

**AND**

**1.1.2.3** One of the following\*\*:

- If the target drug is NOT listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why a maximum of five (5) equivalent formulary drugs, as determined by the PA pharmacist are not appropriate
- If the target drug is listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why the number of alternatives\* specified by the Non-Formulary Alternatives Table is not appropriate (see technician note for NF Alts Table URL)
- No formulary drug is appropriate to treat the patient's condition

This guideline applies to these Tier 8 medications. If a medication has a non-formulary status and a PA flag of yes, apply the criteria within the drug-specific guideline as well as the non-formulary alternatives grid in the link in the technician note.</p> |

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**AND**

**1.3** Patient is not receiving Nucala in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**1.4** Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist
- Rheumatologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of relapsing or refractory EGPA as defined by ALL of the following:

**2.1.1** Diagnosis of EGPA

**AND**

**2.1.2** Past medical history or presence of asthma

**AND**

**2.1.3** Presence of at least TWO of the following characteristics typical of EGPA:

- Histopathological evidence of: Eosinophilic vasculitis, Perivascular eosinophilic infiltration, Eosinophil-rich granulomatous inflammation
- Neuropathy, mono or poly (motor deficit or nerve conduction abnormality)
- Pulmonary infiltrates, non-fixed

- Sino-nasal abnormality
- Cardiomyopathy (established by echocardiography or MRI)
- Glomerulonephritis (hematuria, red cell casts, proteinuria)
- Alveolar hemorrhage
- Palpable purpura
- Anti-neutrophil cytoplasmic antibody (ANCA) positive

**AND**

**2.1.4** History of relapsing or refractory disease defined as ONE of the following:

- Relapsing disease as defined as a past history (within the past 2 years) of at least one EGPA relapse (requiring additional or dose escalation of corticosteroids or immunosuppressant, or hospitalization)
- Refractory disease as defined as failure to attain remission within the prior 6 months following induction treatment with standard therapy regimens

**AND**

**2.2** Patient is currently taking standard therapy [i.e., systemic glucocorticoids (e.g., prednisone, methylprednisolone)] with or without immunosuppressive therapy (e.g., cyclophosphamide, rituximab)]

**AND**

**2.3** Patient is not receiving Nucala in combination with ANY of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.4** Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Non Formulary         |
| <p><b>Approval Criteria</b></p> <p><b>1 - ALL of the following:</b></p> <p><b>1.1</b> Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of severe asthma</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Documentation of positive clinical response to Nucala therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Reduction in the frequency of exacerbations</li> <li>• Decreased utilization of rescue medications</li> <li>• Increase in percent predicted FEV1 from pretreatment baseline</li> <li>• Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)</li> <li>• Reduction in oral corticosteroid requirements</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3</b> Nucala is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.4</b> Patient is not receiving Nucala in combination with any of the following for treatment of the same indication:</p> <ul style="list-style-type: none"> <li>• Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]</li> </ul> |                       |

- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**1.5** Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of severe asthma

**AND**

**2.2** Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:

- Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**2.3** Submission of medical records (e.g., chart notes, laboratory values, etc.) confirming asthma is an eosinophilic phenotype as defined by a baseline (pre-treatment) peripheral blood eosinophil level  $\geq 150$  cells/ $\mu$ L

**AND**

**2.4** Nucala will be used in combination with ONE of the following:

**2.4.1** ONE maximally dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**OR**

**2.4.2** Combination therapy including BOTH of the following:

- ONE maximally dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]
- ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist – montelukast (Singulair); theophylline]

**AND**

**2.5** Patient is not receiving Nucala in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.6** Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

| Product Name:Nucala prefilled autoinjector and prefilled syringe [a]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                  |
| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Hypereosinophilic Syndrome (HES) |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 12 month(s)                      |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Initial Authorization            |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Non Formulary                    |
| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p><b>1.1</b> Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of HES</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Documentation of positive clinical response to Nucala therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Reduction in frequency of HES flares</li> <li>• Maintenance or reduction in background HES therapy requirements</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3</b> Patient is not receiving Nucala in combination with ANY of the following for treatment of the same indication:</p> <ul style="list-style-type: none"> <li>• Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]</li> <li>• Anti-IgE therapy [e.g., Xolair (omalizumab)]</li> <li>• Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]</li> <li>• Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]</li> </ul> <p style="text-align: center;"><b>AND</b></p> |                                  |

**1.4 Prescribed by ONE of the following:**

- Allergist
- Cardiologist
- Hematologist
- Immunologist
- Pulmonologist

**OR**

**2 - ALL of the following:**

**2.1 Diagnosis of HES greater than or equal to 6 months ago**

**AND**

**2.2 BOTH of the following:**

- There is no identifiable non-hematologic secondary cause of the patient's HES (e.g., drug hypersensitivity, parasitic helminth infection, HIV infection, non-hematologic malignancy)
- HES is not FIP1L1-PDGFR $\alpha$  kinase-positive

**AND**

**2.3 Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting BOTH of the following:**

- Baseline (pre-mepolizumab treatment) blood eosinophil level greater than or equal to 1000 cells/ $\mu$ L within the past 4 weeks
- Patient is currently receiving a stable dose of background HES therapy (e.g., oral corticosteroid, immunosuppressor, or cytotoxic therapy)

**AND**

**2.4 Patient is not receiving Nucala in combination with ANY of the following for treatment of the same indication:**

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.5** Prescribed by ONE of the following:

- Allergist
- Cardiologist
- Hematologist
- Immunologist
- Pulmonologist

| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Initial Authorization                             |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Non Formulary                                     |
| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p>1.1 Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of CRSwNP</p> <p style="text-align: center;"><b>AND</b></p> <p>1.2 Documentation of positive clinical response to Nucala therapy</p> <p style="text-align: center;"><b>AND</b></p> <p>1.3 Patient will continue to receive Nucala as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)</p> <p style="text-align: center;"><b>AND</b></p> <p>1.4 Patient is NOT receiving Nucala in combination with ANY of the following for treatment of the same indication:</p> |                                                   |

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**1.5** Prescribed by ONE of the following:

- Allergist
- Immunologist
- Otolaryngologist
- Pulmonologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of chronic rhinosinusitis with nasal polyps (CRSwNP) defined by ALL of the following:

**2.1.1** TWO OR MORE of the following symptoms for longer than 12 weeks duration:

- Nasal mucopurulent discharge
- Nasal obstruction, blockage, or congestion
- Facial pain, pressure, and/or fullness
- Reduction or loss of sense of smell

**AND**

**2.1.2** ONE of the following findings using nasal endoscopy and/or sinus computed tomography (CT):

- Purulent mucus or edema in the middle meatus or ethmoid regions
- Polyps in the nasal cavity or the middle meatus
- Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

**AND**

**2.1.3 ONE of the following:**

- Presence of bilateral nasal polyposis
- Patient has previously required surgical removal of bilateral nasal polyps

**AND**

**2.1.4 ONE of the following:**

**2.1.4.1 Patient has required prior sinus surgery**

**OR**

**2.1.4.2 Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for CRSwNP in the previous 2 years**

**OR**

**2.1.4.3 Patient has been unable to obtain symptom relief after trial of two of the following classes of agents:**

- Nasal saline irrigations
- Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)
- Antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)

**AND**

**2.2 Patient will receive Nucala as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)**

**AND**

**2.3 Patient is NOT receiving Nucala in combination with ANY of the following for treatment of the same indication:**

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.4 Prescribed by ONE of the following:**

- Allergist
- Immunologist
- Otolaryngologist
- Pulmonologist
