### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Sutent (sunitinib malate) is a tyrosine kinase inhibitor indicated for the treatment of gastrointestinal stromal tumor (GIST) after disease progression on or intolerance to Gleevec (imatinib mesylate); treatment of advanced renal cell carcinoma (RCC); adjuvant treatment of adult patients at high risk of recurrent RCC following nephrectomy; and treatment of progressive, well-differentiated pancreatic neuroendocrine tumors (pNET) in patients with unresectable locally advanced or metastatic disease.</p> <p>The National Cancer Comprehensive Network (NCCN) recommends use of Sutent for medullary, follicular, oncocytic, or papillary thyroid carcinoma; chordoma; meningiomas; thymic carcinoma; and treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. [2] NCCN also approves the use of Sutent for</p> |

other soft tissue sarcomas: alveolar soft part sarcoma (ASPS), angiosarcoma, solitary fibrous tumor/hemangiopericytoma, and extraskeletal myxoid chondrosarcoma.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Guideline Type           | Prior Authorization       |

### Approval Criteria

1 - Documentation of positive clinical response to Synribo therapy

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

#### Background

Synribo (omacetaxine) is indicated for the treatment of adult patients with chronic or accelerated phase chronic myeloid leukemia (CML) with resistance and/or intolerance to two or more tyrosine kinase inhibitors (TKI).[1] The National Cancer Comprehensive Network (NCCN) also recommends the use of Synribo for patients with advanced phase CML with progression to accelerated phase and for patients with relapsed disease after hematopoietic stem cell transplantation with resistance and/or intolerance to two or more tyrosine kinase inhibitors.[2]

|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
|---------------------------------------------|

**Background:**

Syprine (trientine hydrochloride) and trientine hydrochloride 500mg are indicated for the treatment of patients with Wilson's disease who are intolerant of penicillamine. Syprine and trientine hydrochloride cannot be considered interchangeable with penicillamine. Syprine and trientine hydrochloride should be used when continued treatment with penicillamine is no longer possible because of intolerable or life endangering side effects. [1]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Drug Name: Tafinlar (dabrafenib)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p><b>Melanoma</b> Indicated as a single agent for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E mutation. Tafinlar is also indicated, in combination with trametinib, for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E or V600K mutations, and the adjuvant treatment of patients with melanoma with BRAF V600E or V600K mutations and involvement of lymph node(s), following complete resection.</p> <p><b>Non-small cell lung cancer</b> Indicated, in combination with trametinib, for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation.</p> <p><b>Anaplastic thyroid cancer</b> Indicated, in combination with trametinib, for the treatment of patients with locally advanced or metastatic anaplastic thyroid cancer (ATC) with BRAF V600E mutation and with no satisfactory locoregional treatment options.</p> |

**Solid Tumors** Indicated for the treatment of adult and pediatric patients 1 year of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options.

**Low-Grade Glioma** Indicated, in combination with Mekinist, for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy.

**Other Uses:** The National Cancer Comprehensive Network (NCCN) also approves the use of Tafenlar in combination with Mekinist for the adjuvant treatment of ATC with BRAF V600E mutations following resection; and as monotherapy for the treatment of follicular, oncocylic, and papillary thyroid carcinomas with a BRAF mutation; in combination with Mekinist for the treatment for recurrent, advanced, or metastatic NSCLC in patients with BRAF V600E mutation, or as single agent if the combination of Tafenlar and Mekinist is not tolerated; in the treatment of glioblastomas and other high-grade gliomas; in the treatment of central nervous system (CNS) cancer in patients with melanoma; ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease or recurrence in BRAF V600E positive tumors; pancreatic and ampullary adenocarcinomas if BRAF V600E mutation positive; and certain BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers; hairy cell leukemia; salivary gland tumor; and gastrointestinal stromal tumor.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Tafinlar® (dabrafenib) is a kinase inhibitor indicated as a single agent for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E mutation as detected by an FDA-approved test. Tafinlar is not indicated for treatment of patients with wild-type BRAF solid tumors.<sup>1</sup>

Tafinlar, in combination with Mekinist® (trametinib), is indicated for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E or BRAF V600K mutations as detected by an FDA-approved test and for the adjuvant treatment of melanoma with BRAF V600E or BRAF V600K mutations, as detected by an FDA approved test, involving the lymph node(s), following complete resection. Tafinlar, in combination with Mekinist, is indicated for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation as detected by an FDA-approved test, for the treatment of locally advanced or metastatic anaplastic thyroid cancer (ATC) with BRAF V600E mutation and with no satisfactory locoregional treatment options, and for the treatment of adult and pediatric patients 1 year of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options. The latter indication is approved under accelerated approval based on overall response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial(s). Tafinlar, in combination with Mekinist, is also indicated for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy.

The National Comprehensive Cancer Network (NCCN) also recommends use of Tafinlar in combination with Mekinist for the adjuvant treatment of ATC with BRAF V600E mutations following resection; and as monotherapy for the treatment of follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation; in combination with Mekinist for the treatment for recurrent, advanced, or metastatic NSCLC in patients with BRAF V600E

mutation, or as single agent if the combination of Tafenlar and Mekinist is not tolerated; in the treatment of glioblastomas and other high-grade gliomas; in the treatment of central nervous system (CNS) cancer in patients with melanoma; ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease or recurrence in BRAF V600E positive tumors; pancreatic and ampullary adenocarcinomas if BRAF V600E mutation positive; and certain BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers; hairy cell leukemia; salivary gland tumor; and gastrointestinal stromal tumor.

Information on FDA-approved tests for the detection of BRAF V600 mutations in melanoma may be found at: <http://www.fda.gov/CompanionDiagnostics>

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**First-line Treatment of EGFR Mutation-Positive Locally Advanced or Metastatic NSCLC**

In combination with pemetrexed and platinum-based chemotherapy is indicated for the first-line treatment of adult patients with locally advanced or metastatic NSCLC whose tumors have EGFR exon 19 deletions or exon 21 L858R mutations, as detected by an FDA-approved test

**Previously Treated EGFR T790M Mutation-Positive Metastatic NSCLC** Indicated for the treatment of adult patients with metastatic EGFR T790M mutation-positive NSCLC, as detected by an FDA-approved test, whose disease has progressed on or after EGFR tyrosine kinase inhibitor (TKI) therapy

### 3 . Background

#### Benefit/Coverage/Program Information

**Background:**

Tagrisso (osimertinib) is a kinase inhibitor indicated for first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 L858R mutations, and patients with metastatic EGFR T790M mutation-positive NSCLC, whose disease has progressed on or after EGFR tyrosine kinase inhibitor (TKI) therapy. Tagrisso is also indicated for adjuvant therapy after tumor resection in adults with NSCLC whose tumors have EGFR exon 19 deletions or exon 21 L858R mutations, and for the treatment of adult patients with locally advanced, unresectable (stage III) non-small cell lung cancer (NSCLC) whose disease has not progressed during or following concurrent or sequential platinum-based chemoradiation therapy and whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 L858R mutations. The National Cancer Comprehensive Network (NCCN) recommends the use of Tagrisso for the treatment for limited and extensive brain metastases in EGFR mutation-positive NSCLC. NCCN also recommends Tagrisso for use in leptomeningeal metastases from NSCLC that is EGFR mutation-positive.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Documentation of positive clinical response while on Takhzyro therapy</p> |                 |

**AND**

**2** - Reduction in the utilization of on-demand therapies used for acute attacks (e.g., Berinert, Ruconest, Firazyr, Kalbitor) as determined by claims information, while on Takhzyro therapy

**AND**

**3** - Prescribed by ONE of the following:

- Immunologist
- Allergist

**AND**

**4** - ALL of the following:

- For prophylaxis against HAE attacks
- Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Haegarda, Orladeyo)

**AND**

**5** - One of the following:

**5.1** Patient is less than 6 years of age

**OR**

**5.2** Documentation of the number of acute HAE attacks in the previous 6 months, while on Takhzyro therapy, therefore:

**5.2.1** Patient experienced no (zero) acute HAE attacks in the previous 6 months:

**OR**

**5.2.2** Patient experienced one or more acute HAE attacks in the previous 6 months:

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Product Name:Taltz [a]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                        |
| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Plaque Psoriasis (PsO) |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 12 month(s)            |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Initial Authorization  |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Prior Authorization    |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of chronic moderate to severe plaque psoriasis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 ALL of the following:</p> <p>2.1.1 Greater than or equal to 3 % body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis</p> <p style="text-align: center;"><b>AND</b></p> <p>2.1.2 History of failure to ONE of the following topical therapies, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):</p> <ul style="list-style-type: none"><li>• Corticosteroids (e.g., betamethasone, clobetasol, desonide)</li><li>• Vitamin D analogs (e.g., calcitriol, calcipotriene)</li><li>• Tazarotene</li><li>• Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)</li><li>• Anthralin</li><li>• Coal tar</li></ul> <p style="text-align: center;"><b>AND</b></p> <p>2.1.3 History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless</p> |                        |

contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Otezla (apremilast), Skyrizi (risankizumab-rzaa), Sotyktu (deucravacitinib), ustekinumab, Tremfya (guselkumab)]

**AND**

**3** - ONE of the following:

**3.1** History of failure, contraindication, or intolerance to ONE of the following preferred products (document drug, date, and duration of trial):

- One of the preferred adalimumab products [b]
- Skyrizi (risankizumab)
- One of the preferred ustekinumab products [c]

**OR**

**3.2** BOTH of the following:

- Patient is currently on Taltz therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Lilly sponsored Taltz Together (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Taltz\*

**AND**

**4** - Patient is not receiving Taltz in combination with another targeted immunomodulator [e.g., adalimumab, Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Ilumya (tildrakizumab), Olumiant (baricitinib), Orencia (abatacept), Otezla (apremilast), Rinvoq (upadacitinib), Siliq (brodalumab), Simponi (golimumab), Skyrizi (risankizumab), Sotyktu (deucravacitinib), ustekinumab, Tremfya (guselkumab), Xeljanz (tofacitinib)]

**AND**

**5 - Prescribed by or in consultation with a dermatologist**

**OR**

**3.2 BOTH of the following:**

- Patient is currently on Taltz therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Lilly sponsored Taltz Together (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Taltz\*

**AND**

**4** - Patient is not receiving Taltz in combination with another targeted immunomodulator [e.g., adalimumab, Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Olumiant (baricitinib), Orencia (abatacept), Otezla (apremilast), Rinvoq (upadacitinib), Simponi (golimumab), Skyrizi (risankizumab), ustekinumab, Tremfya (guselkumab), Xeljanz (tofacitinib)]

**AND**

**5** - Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Product Name:Taltz [a] |                                          |
| Diagnosis              | Non-radiographic Axial Spondyloarthritis |
| Approval Length        | 12 month(s)                              |
| Therapy Stage          | Initial Authorization                    |
| Guideline Type         | Prior Authorization                      |

## **Approval Criteria**

**1** - Diagnosis of active non-radiographic axial spondyloarthritis

**AND**

**2** - ONE of the following:

- History of failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trials)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of non-radiographic axial spondyloarthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g. Cimzia (certolizumab), Cosentyx (secukinumab), Rinvoq (upadacitinib)]

**AND**

**3** - ONE of the following:

**3.1** History of failure, contraindication, or intolerance to Rinvoq (upadacitinib) (document date and duration of trial)

**OR**

**3.2** BOTH of the following:

- Patient is currently on Taltz therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Lilly sponsored Taltz Together (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Taltz\*

**AND**

**4** - Patient is not receiving Taltz in combination with another targeted immunomodulator [e.g.,

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Olumiant (baricitinib), Orencia (abatacept), Simponi (golimumab), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]

**AND**

**5 - Prescribed by or in consultation with a rheumatologist**

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Taltz (ixekizumab) is a humanized interleukin-17A antagonist indicated for the treatment of moderate to severe plaque psoriasis in patients aged 6 years or older who are candidates for systemic therapy or phototherapy. It is also indicated for the treatment of adult patients with active psoriatic arthritis, active non-radiographic axial spondyloarthritis with objective signs of inflammation, or active ankylosing spondylitis.<sup>1</sup>

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Background:</b></p> <p>Talzenna (talazoparib) is a poly (ADP-ribose) polymerase (PARP) inhibitor indicated as a single agent for the treatment of adult patients with deleterious or suspected deleterious germline BRCA mutated (gBRCAm), human epidermal growth factor receptor 2 (HER2)-negative locally advanced or metastatic breast cancer. Appropriate patients for therapy are selected based on an FDA-approved companion diagnostic for Talzenna. [1] Talzenna is also indicated in combination with Xtandi (enzalutamide) for the treatment of adult patients with homologous recombination repair (HRR) gene-mutated metastatic castration-resistant prostate cancer (mCRPC). The National Comprehensive Cancer Network (NCCN) also supports use of Talzenna in any locally advanced metastatic breast cancer subtype associated with a germline BRCA1 or BRCA2 mutation.</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"> <li>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes</li> </ul> |

(ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class

- Supply limits may be in place.

| <p><b>Locally advanced or metastatic non-small cell lung cancer (NSCLC)</b> Indicated for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations receiving first-line, maintenance, or second or greater line treatment after progression following at least one prior chemotherapy regimen. [1]</p> <p><b>Locally advanced, unresectable, or metastatic pancreatic cancer</b> indicated as first-line treatment for locally advanced, unresectable, or metastatic pancreatic cancer in combination with gemcitabine. [1]</p> <p><b>Other Indications</b> In addition, the National Cancer Comprehensive Network (NCCN) also recommends Tarceva for the treatments of chordoma, brain, leptomeningeal, and spine metastases originating from NSCLC, relapsed or stage IV kidney cancer with non-clear cell histology, NSCLC with known sensitizing EGFR mutations, and vulvar cancer. [2]</p> |

| <p><b>Background:</b></p> <p>Tarceva (erlotinib) is a kinase inhibitor indicated for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations receiving first-line, maintenance, or second or greater line treatment after progression following at least one prior chemotherapy regimen. [1] Tarceva is also indicated as first-line treatment for locally advanced, unresectable, or metastatic pancreatic cancer in combination with gemcitabine. [1] In addition, the National Cancer Comprehensive Network (NCCN) also recommends Tarceva for the treatments of chordoma, brain, leptomeningeal, and spine metastases originating from NSCLC, relapsed or stage IV kidney cancer with non-clear cell histology, NSCLC with known sensitizing EGFR mutations, and vulvar cancer. [2]</p> <p>The safety and efficacy of Tarceva has not been established in patients with NSCLC whose tumors have other EGFR mutations. Tarceva is not recommended for use in combination with platinum-based chemotherapy. [1]</p> <p><b>Additional Clinical Rules:</b></p> |

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Tarpeyo (budesonide delayed-release capsules)</b>                                                                                                                           |
| <b>Primary immunoglobulin A nephropathy (IgAN)</b> Indicated to reduce the loss of kidney function in adults with primary immunoglobulin A nephropathy (IgAN) who are at risk for disease |

## 2 . Criteria

|                                  |               |
|----------------------------------|---------------|
| <b>Product Name: Tarpeyo [a]</b> |               |
| Approval Length                  | 9 month(s)    |
| Guideline Type                   | Non Formulary |

**Approval Criteria**

**1** - Diagnosis of primary immunoglobulin A nephropathy (IgAN) confirmed by renal biopsy

**AND**

**2** - Patient is at risk for disease progression

**AND**

**3** - Used to reduce the loss of kidney function

**AND**

**4** - Estimated glomerular filtration rate (eGFR) greater than or equal to 35 mL/min/1.73 m<sup>2</sup>

**AND**

**5** - ONE of the following:

**5.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following:

- maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)

**OR**

**5.2** Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs

**AND**

**6** - History of failure, contraindication or intolerance to a 30-day trial of a glucocorticoid (e.g., methylprednisolone, prednisone)

**AND**

**7** - Prescribed by or in consultation with a nephrologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Tarpeyo (budesonide delayed-release capsule) is indicated to reduce the loss of kidney function in adults with primary immunoglobulin A nephropathy (IgAN) who are at risk for disease.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Tegsedi (inotersen) is a transthyretin-directed antisense oligonucleotide indicated for treatment of the polyneuropathy of hereditary transthyretin-mediated amyloidosis in adults.

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

**Drug Name: Androgel (1%, 1.62%), Testim, Vogelxo, Androderm, Natesto, Fortesta, Jatenzo, Kyzatrex, Tlando, Undecatrex, testosterone 30 mg/act soln, Xyosted, Depo-Testosterone, testosterone enanthate inj.**

**Hypogonadism (congenital or acquired) or hypogonadotropic hypogonadism**  
Testosterone products are approved by the Food and Drug Administration (FDA) for testosterone replacement therapy in males with primary hypogonadism (congenital or acquired) or hypogonadotropic hypogonadism (congenital or acquired). Primary hypogonadism originates from a deficiency or disorder in the testicles. Secondary hypogonadism indicates a problem in the hypothalamus or the pituitary gland. Testosterone use has been strongly linked to improvements in muscle mass, bone density, and libido.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                       |

| <p><b>Approval Criteria</b></p> <p><b>1 - Patient has a history of ONE of the following:</b></p> <ul style="list-style-type: none"> <li>• Bilateral orchiectomy</li> <li>• Panhypopituitarism</li> <li>• A genetic disorder known to cause hypogonadism (e.g., congenital anorchia, Klinefelter's syndrome)</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p><b>2 - ALL of the following:</b></p> <p><b>2.1 ONE of the following:</b></p> <p><b>2.1.1</b> Two pre-treatment serum total testosterone levels less than 300 ng/dL (less than 10.4 nmol/L) or less than the reference range for the lab, taken at separate times (This may require treatment to be temporarily held. Document lab value and date for both levels)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>2.1.2 BOTH of the following:</b></p> <ul style="list-style-type: none"> <li>• Patient has a condition that may cause altered sex-hormone binding globulin (SHBG) (e.g., thyroid disorder, HIV disease, liver disorder, diabetes, obesity)</li> </ul> |                       |

- One pre-treatment calculated free or bioavailable testosterone level less than 50 pg/mL (<5 ng/dL or < 0.17 nmol/L) or less than the reference range for the lab (This may require treatment to be temporarily held. Document lab value and date)

**AND**

**2.2 Patient is NOT taking any of the following:**

- One of the following growth hormones, unless diagnosed with panhypopituitarism: Genotropin, Humatrope, Norditropin FlexPro, Nutropin AQ, Omnitrope, Saizen
- Aromatase inhibitor (e.g., Arimidex [anastrozole], Femara [letrozole], Aromasin [exemestane])

**AND**

**2.3 Patient was male at birth**

**AND**

**2.4 Diagnosis of hypogonadism**

**AND**

**2.5 ONE of the following:**

- Significant reduction in weight (less than 90% ideal body weight) (e.g., AIDS wasting syndrome)
- Osteopenia
- Osteoporosis
- Decreased bone density
- Decreased libido
- Organic cause of testosterone deficiency (e.g., injury, tumor, infection, or genetic defects)

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Effective 11.1.2025

|                 |                                                                   |
|-----------------|-------------------------------------------------------------------|
| Diagnosis       | Non-Gender Dysphoria (includes hypogonadism) and Gender Dysphoria |
| Approval Length | 12 month(s)                                                       |
| Therapy Stage   | Reauthorization                                                   |
| Guideline Type  | Prior Authorization                                               |

**Approval Criteria**

**1** - Patient has a history of ONE of the following:

- Bilateral orchiectomy
- Panhypopituitarism
- A genetic disorder known to cause hypogonadism (eg, congenital anorchia, Klinefelter's syndrome)

**OR**

**2** - BOTH of the following:

**2.1** ONE of the following:

**2.1.1** Follow-up total serum testosterone level drawn within the past 12 months is within or below the normal male limits of the reporting lab (document value and date)

**OR**

**2.1.2** Follow-up total serum testosterone level drawn within the past 12 months is outside of upper male limits of normal for the reporting lab and the dose is adjusted (document value and date)

**OR**

**2.1.3** BOTH of the following:

**2.1.3.1** Patient has a condition that may cause altered sex-hormone binding globulin (SHBG) (e.g., thyroid disorder, HIV disease, liver disorder, diabetes, obesity)

**AND**

**2.1.3.2 ONE of the following:**

- Follow-up calculated free or bioavailable testosterone level drawn within the past 12 months is within or below the normal male limits of the reporting lab (document lab value and date)
- Follow-up calculated free or bioavailable testosterone level drawn within the past 12 months is outside of upper male limits of normal for the reporting lab and the dose is adjusted (document value and date)

**AND**

**2.2 Patient is NOT taking any of the following:**

- One of the following growth hormones, unless diagnosed with panhypopituitarism: Genotropin, Humatrope, Norditropin FlexPro, Nutropin AQ, Omnitrope, Saizen
- Aromatase inhibitor (eg, Arimidex [anastrozole], Femara [letrozole], Aromasin [exemestane])

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Testosterone products are approved by the Food and Drug Administration (FDA) for testosterone replacement therapy in males with primary hypogonadism (congenital or acquired) or hypogonadotropic hypogonadism (congenital or acquired). Primary hypogonadism originates from a deficiency or disorder in the testicles. Secondary hypogonadism indicates a problem in the hypothalamus or the pituitary gland. Testosterone use has been strongly linked to improvements in muscle mass, bone density, and libido.

The purpose of this program is to provide coverage for androgens and anabolic steroid therapy for the treatment of conditions for which they have shown to be effective and are within the scope of the plan's pharmacy benefit. Coverage for the enhancement of athletic performance or body building will not be provided.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Non Formulary         |
| <p><b>Approval Criteria</b></p> <p><b>1 - ALL of the following:</b></p> <p><b>1.1</b> Patient has been established on therapy with Tezspire under an active UnitedHealthcare medical benefit prior authorization for the treatment of severe asthma</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Documentation of positive clinical response to Tezspire therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Reduction in the frequency of exacerbations</li> <li>• Decreased utilization of rescue medications</li> <li>• Increase in percent predicted FEV1 from pretreatment baseline</li> <li>• Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3</b> Tezspire is being used in combination with an inhaled corticosteroid (ICS)-containing controller medication [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.4</b> Patient is not receiving Tezspire in combination with ANY of the following for the treatment of the same indication:</p> <ul style="list-style-type: none"> <li>• Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]</li> <li>• Anti-IgE-therapy [e.g., Xolair (omalizumab)]</li> </ul> |                       |

- Anti-interleukin-4 therapy [e.g., Dupixent (dupilumab)]

**AND**

**1.5** Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of severe asthma

**AND**

**2.2** Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:

- Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**2.3** Tezspire will be used in combination with ONE of the following:

**2.3.1** ONE maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) product [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**OR**

**2.3.2** Combination therapy including BOTH of the following:

- ONE high-dose (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]
- ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist - montelukast (Singulair); theophylline]

**AND**

**2.4** ONE of the following:

**2.4.1** BOTH of the following:

- Tezspire will be used to treat eosinophilic asthma
- History of failure, contraindication, or intolerance to a 4-month trial of Dupixent (dupilumab)

**OR**

**2.4.2** BOTH of the following:

- Tezspire will be used to treat persistent allergic asthma
- History of failure, contraindication, or intolerance to a 4-month trial of Xolair (omalizumab)

**OR**

**2.4.3** BOTH of the following:

- Tezspire will be used to treat oral corticosteroid dependent asthma
- History of failure, contraindication, or intolerance to a 4-month trial of Dupixent (dupilumab)

**OR**

**2.4.4** Patient's asthma is not of the eosinophilic, allergic, or oral corticosteroid dependent phenotype

**AND**

**2.5** Patient is not receiving Tezspire in combination with ANY of the following for the treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

**AND**

**2.6** Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

| <p><b>Approval Criteria</b></p> <p>1 - Documentation of positive clinical response to Tezspire therapy as demonstrated by at least ONE of the following:</p> |                 |

- Reduction in the frequency of exacerbations
- Decreased utilization of rescue medications
- Increase in percent predicted FEV1 from pretreatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)

**AND**

**2** - Tezspire is being used in combination with an ICS-containing controller medication [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**AND**

**3** - Patient is not receiving Tezspire in combination with ANY of the following for the treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin-4 therapy [e.g., Dupixent (dupilumab)]

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background

Tezspire (tezepelumab) is indicated for the add-on maintenance treatment of adult and pediatric patients aged 12 years and older with severe asthma.

*Limitations of use:*

Tezspire is not indicated for relief of acute bronchospasm of status asthmaticus.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Thalomid (thalidomide) is a synthetic glutamic acid derivative indicated for the treatment of patients with newly diagnosed multiple myeloma (MM) in combination with dexamethasone. It is also indicated for the acute treatment of cutaneous manifestations of moderate to severe erythema nodosum leprosum (ENL) and as maintenance therapy for prevention and suppression of the cutaneous manifestations of ENL recurrence. It is not indicated as monotherapy for such ENL treatment in the presence of moderate to severe neuritis.

The National Cancer Comprehensive Network (NCCN) also recommends the use of Thalomid for treatment of histiocytic neoplasms – Langerhans cell histiocytosis and Rosai-Dorman disease, Castleman's disease, pediatric medulloblastoma, and kaposi sarcoma.

Because of the risk of serious malformations if given during pregnancy, the manufacturer has an extensive risk management program requiring registration by patients, prescribers and dispensing pharmacies. Additional information about the Thalomid Risk Evaluation and Mitigation Strategy (REMS) [Thalomid REMS®] program may be found at <http://www.thalidomiderems.com/>.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

- Supply limits may be in place.

| <b>Approval Criteria</b><br><br>1 - The requested medication will be used exclusively, and the previously prescribed medication will be discontinued |                |

**OR**

**2** - Special circumstances exist that necessitate the need for duplicate therapy such as a nationally recognized drug shortage (document special circumstances)

## 2 . Background

### Benefit/Coverage/Program Information

#### Background:

A concurrent DUR (cDUR) program screens all retail and mail service prescription claims at the point of service before the drug is dispensed. The cDUR system screens each prescription against the member's prescription drug history. The system evaluates drug prescribing and utilization, including therapeutic duplication, as well as drug interactions to improve quality and cost effectiveness of dispensed medications by helping to ensure that adjudicated and covered prescriptions are clinically appropriate. The program includes communication avenues through claims edits and messaging to the dispensing pharmacy at point-of-service.

The following situations would result in application of the therapeutic duplication edit:

- The requested medication has been utilized concurrently with a different drug in the same therapeutic class per recent prescription claims history.
- The requested medication has been utilized concurrently in a different dosage of the same medication per recent prescription claims history.
- The requested medication has been utilized concurrently with a different drug in a different therapeutic class per recent prescription claims history, when the two medications share the same clinical indication but lack support for concomitant use from evidence-based medicine.

#### Drug Classes Subject to a Therapeutic Duplication Edit:

##### A. Drug Classes Subject to Therapeutic Duplication Edit (Reject 88):

- Both brand and generic versions of medications are subject to edit

##### B. Diabetes Agents:

- GLP-1 Receptor Agonists

**Additional Clinical Rules:**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

| Notes                                                                                                                                                                                                                                                                                                                            | <p>*For any given member, all medications containing acetaminophen will accumulate to the total daily dose. For members who need one time overrides for acetaminophen exceeding 4 grams per day due to administrative reasons such as vacation supplies, drug changes, dosage changes, etc., please refer the prescriber/member to the Help Desk by including the following verbiage in closure letters: If you exceed the maximum FDA approved dosing of 4 grams of acetaminophen per day because you need extra medication due to reasons such as going on a vacation, replacement for a stolen medication, your doctor changed to another medication that has acetaminophen, or your doctor changed the dosing on your medication that resulted in acetaminophen exceeding 4 grams per day, please have your pharmacy contact the OptumRx Pharmacy Helpdesk at the time they are filling your prescription for a one-time override.</p> |

## 2 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>A hard safety edit assesses the total cumulative daily dose of acetaminophen based on FDA approved maximum dosing of 4 grams. The edit is triggered if total daily dose exceeds the FDA-defined maximum daily dose. This program is administered for members who have triggered the hard safety edit.</p> |

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.</p> <p>*For members in Illinois, members do not need to meet the age check or try/fail the listed alternatives.</p> |

## 2 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Tobacco cessation therapies are more likely to succeed for patients who are motivated to stop tobacco use and who are given additional advice and support. Patients should be provided with appropriate educational materials and counseling to support the quit attempt. The patient should set a quit date.</p> <p>This program is designed to meet Health Care Reform requirements for tobacco cessation coverage at zero dollar cost share.</p> |

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply |

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>TOBI is an aminoglycoside antibacterial indicated for the management of cystic fibrosis (CF) patients with <i>P. aeruginosa</i>. Safety and efficacy have not been demonstrated in patients</p> |

under the age of 6 years, patients with FEV<sub>1</sub> <25% or >75% predicted, or patients colonized with *B. cepacia*. After 28 days of therapy, patients should stop tobramycin inhalation therapy for the next 28 days, and then resume therapy for the next 28 day on and 28 day off cycle. [1,2]

#### **Additional Clinical Rules**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

|                        | Wound healing (mild)  |

**Background:**

Topical retinoid products are indicated for cosmetic and medical conditions (e.g. acne vulgaris, psoriasis, precancerous skin lesions). Prior Authorization is in place to verify the use is for the diagnosis of a medical condition.

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Tryngolza (olezarsen) is an APOC-III-directed antisense oligonucleotide (ASO) indicated as an adjunct to diet to reduce triglycerides in adults with familial chylomicronemia syndrome (FCS).</p> <p><b>Additional Clinical Programs:</b></p> |

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Tryvio (aprocitentan) is an endothelin receptor antagonist indicated for the treatment of hypertension in combination with other antihypertensive drugs, to lower blood pressure in adult patients who are not adequately controlled on other drugs. Resistant hypertension (RH) is defined as above-goal elevated blood pressure (BP) in a patient despite the concurrent use of 3 antihypertensive drug classes, commonly including a long-acting calcium channel blocker, a blocker of the renin-angiotensin system (angiotensin-converting enzyme inhibitor or angiotensin receptor blocker), and a diuretic. The antihypertensive drugs should be administered at maximum or maximally tolerated daily doses. [1]

Tryvio is only available through a restricted distribution program called the Tryvio REMS.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Tukysa</b>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>HER2-positive breast cancer</b> Indicated in combination with trastuzumab and capecitabine for treatment of adult patients with advanced unresectable or metastatic HER2-positive breast cancer, including patients with brain metastases, who have received one or more prior anti-HER2-based regimens in the metastatic setting.                                                                                                             |
| <b>Colorectal Cancer</b> Indicated in combination with trastuzumab for the treatment of adult patients with RAS wild-type HER2-positive unresectable or metastatic colorectal cancer that has progressed following treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy.                                                                                                                                             |
| <b>Other Uses:</b> The National Cancer Comprehensive Network (NCCN) recommends the use of Tukysa for the treatment of central nervous system cancers (limited and extensive brain metastases) when used in combination with capecitabine and trastuzumab in patients with HER2 positive breast cancer if previously treated with one or more anti-HER2-based regimens. The NCCN also recommends the use of Tukysa in combination with trastuzumab |

for the treatment of advanced or metastatic colorectal cancer (HER2-amplified and RAS and BRAF wild-type) if intensive therapy not recommended as well as in combination with trastuzumab as subsequent therapy for HER2-positive unresectable, resected gross residual (R2), or metastatic biliary tract cancers.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                       |

### Approval Criteria

**1** - Diagnosis of unresectable, advanced, or metastatic colorectal cancer (HER2-amplified and RAS and BRAF wild-type)

**AND**

**2** - Disease is human epidermal growth factor receptor 2 (HER2)-positive

**AND**

**3** - One of the following:

**3.1** Patient has previously been treated with ONE of the following regimens:

- Fluoropyrimidine-based chemotherapy
- Oxaliplatin-based chemotherapy
- Irinotecan-based chemotherapy

**OR**

**3.2** Patient is not appropriate for intensive therapy

**AND**

**4** - Used in combination with trastuzumab (e.g., Kanjinti, Ogivri, Trazimera)

| <b>Background:</b><br><br><p>Tukysa (tucatinib) is a kinase inhibitor indicated in combination with trastuzumab and capecitabine for treatment of adult patients with advanced unresectable or metastatic human epidermal growth factor receptor 2 (HER2)-positive breast cancer, including patients with brain metastases, who have received one or more prior anti-HER2-based regimens in the</p> |

metastatic setting. Tukysa is also indicated in combination with trastuzumab for the treatment of adult patients with RAS wild-type HER2-positive unresectable or metastatic colorectal cancer that has progressed following treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy.

The National Cancer Comprehensive Network (NCCN) recommends the use of Tukysa for the treatment of central nervous system cancers (limited and extensive brain metastases) when used in combination with capecitabine and trastuzumab in patients with HER2 positive breast cancer if previously treated with one or more anti-HER2-based regimens. The NCCN also recommends the use of Tukysa in combination with trastuzumab for the treatment of advanced or metastatic colorectal cancer (HER2-amplified and RAS and BRAF wild-type) if intensive therapy not recommended as well as in combination with trastuzumab as subsequent therapy for HER2-positive unresectable, resected gross residual (R2), or metastatic biliary tract cancers.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Turalio (pexidartinib) is a kinase inhibitor indicated for the treatment of adult patients with symptomatic tenosynovial giant cell tumor (TGCT) associated with severe morbidity or functional limitations and not amenable to improvement with surgery.

The National Cancer Comprehensive Network (NCCN) also recommends Turalio as single-agent therapy for the treatment of TGCT/ pigmented villonodular synovitis (PVNS) in patients without respect to morbidity and surgery eligibility. NCCN also recommends Turalio for colony stimulating factor 1 receptor (CSF1R) mutation positive histiocytic neoplasms.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### Approval Criteria

1 - Diagnosis of colon cancer

**AND**

2 - Disease is HER2-amplified and RAS and BRAF wild-type

**AND**

3 - ONE of the following:

3.1 Disease is proficient mismatch repair/microsatellite-stable (pMMR/MSS)

**OR**

3.2 BOTH of the following:

**3.2.1** Disease is positive for deficient mismatch repair/microsatellite instability-high (dMMR/MSI-H) or polymerase epsilon/delta (POLE/POLD1) mutation

**AND**

**3.2.2** ONE of the following:

- Ineligible for or progressed on checkpoint inhibitor immunotherapy [e.g., Opdivo (nivolumab), Keytruda (pembrolizumab), Jemperli (dostarlimab-gxly)]
- Has a contraindication to checkpoint inhibitor immunotherapy

**AND**

**4** - ONE of the following:

**4.1** BOTH of the following:

- Used as initial therapy for unresectable metachronous metastases
- Previous therapy with FOLFOX (fluorouracil, leucovorin, and oxaliplatin) or CapeOX (capecitabine and oxaliplatin) within the past 12 months

**OR**

**4.2** Intensive chemotherapy with ONE of the following is not recommended:

- Oxaliplatin
- Irinotecan
- Capecitabine

**OR**

**4.3** Used as second-line and subsequent therapy for progression of advanced or metastatic disease

**AND**

**5** - Used in combination with trastuzumab

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Tykerb (lapatinib) is a kinase inhibitor indicated for use in combination with Femara (letrozole) for the treatment of postmenopausal women with hormone receptor positive metastatic breast cancer that overexpresses the human epidermal growth factor receptor 2 (HER2) receptor for whom hormonal therapy is indicated. Tykerb is also indicated in combination with Xeloda (capecitabine) for treatment of patients with advanced or metastatic breast cancer whose tumors overexpress HER2 and who have received prior therapy, including an anthracycline, a taxane, and trastuzumab. Patients should have disease progression on trastuzumab prior to initiation of treatment with Tykerb in combination with Xeloda. The National Cancer Comprehensive Network (NCCN) also recommends the use of Tykerb in metastatic central nervous system (CNS) lesions with primary tumor of the breast, intracranial and spinal ependymomas, EGFR-positive chordoma and colon and rectal cancers not previously treated with HER2 inhibitors.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Tymlos is a human parathyroid hormone analog indicated for the treatment of postmenopausal women with osteoporosis at high risk for fracture or patients who have failed or are intolerant to other available osteoporosis therapy. Tymlos is also indicated to increase bone density in men with osteoporosis at high risk for fracture or patients who have failed or are intolerant to other available osteoporosis therapy. [1]

The American Association of Clinical Endocrinologists/American College of Endocrinology (AACE/ACE) recommend the use of abaloparatide in patients unable to use oral therapy and as initial therapy for patients at very high fracture risk defined as the following: patients with a recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture >30%, hip fracture >4.5%) or other validated fracture risk algorithm to be at very high fracture risk.[2] Additionally, the AACE/ACE and Endocrine Society both recommend to limit treatment with abaloparatide to 2 years. [2-3]

The safety and efficacy of Tymlos have not been evaluated beyond 2 years of treatment. Cumulative use of Tymlos and other parathyroid hormone analogs (e.g., Forteo, teriparatide injection) for more than 2 years during a patient's lifetime is not recommended. [1-3]

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes

(ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

### Note:

NOTE: This program applies to the subcutaneous formulations of ustekinumab

## 1 . Indications

**Drug Name:** Stelara® (ustekinumab), Imuldosa™ (ustekinumab-slrf), Otulfi™ (ustekinumab-aaaz), Pyzchiva™ (ustekinumab-ttwe), Selarsdi™ (ustekinumab-aekn), Steqeyma (ustekinumab-stba), ustekinumab-aekn (unbranded Selarsdi), ustekinumab-kfce (unbranded Yesintek), ustekinumab-stba (unbranded Steqeyma), ustekinumab-ttwe (unbranded Pyzchiva), Wezlana (ustekinumab-auub), Yesintek™ (ustekinumab-kfce)

**Plaque Psoriasis** Indicated for the treatment of adult and pediatric patients 6 years of age or older with moderate to severe plaque psoriasis who are candidates for phototherapy or

systemic therapy.

**Psoriatic Arthritis** Indicated for the treatment of adult and pediatric patients 6 years of age or older with active psoriatic arthritis.

**Crohn's Disease** Indicated in adult patients with moderately to severely active Crohn's disease.

**Ulcerative Colitis** Indicated in adults for moderately to severely active ulcerative colitis.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                       |

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderate to severe plaque psoriasis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 ALL of the following:</p> <p>2.1.1 Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis</p> <p style="text-align: center;"><b>AND</b></p> <p>2.1.2 History of failure to ONE of the following topical therapies, unless contraindicated or</p> |                       |

clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Coal tar

**AND**

**2.1.3** History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), Tremfya (guselkumab)]

**OR**

**2.3** BOTH of the following:

- Patient is currently on ustekinumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of ustekinumab\*

**AND**

**3** - If the request is for a non-formulary ustekinumab product, the patient has a history of failure to all formulary ustekinumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary ustekinumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**5** - Prescribed by or in consultation with a dermatologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of active psoriatic arthritis</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - ONE of the following:</p> |                           |

**2.1** History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Tremfya (guselkumab) Xeljanz (tofacitinib), Otezla (apremilast), Rinvoq (upadacitinib)]

**OR**

**2.3** BOTH of the following:

- Patient is currently on ustekinumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of ustekinumab\*

**AND**

**3** - If the request is for a non-formulary ustekinumab product, the patient has a history of failure to all formulary ustekinumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary ustekinumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**3 - ONE of the following:**

**3.1** History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

**OR**

**3.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Otezla (apremilast), Rinvoq (upadacitinib)]

**OR**

**3.3 BOTH of the following:**

- Patient is currently on ustekinumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of ustekinumab\*

**AND**

**4 -** If the request is for a non-formulary ustekinumab product, the patient has a history of failure to all formulary ustekinumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary ustekinumab product (please document reason/special circumstances) [b]

**AND**

**5 -** Patient is not receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**2.3** Patient has been established on therapy with ustekinumab under an active UnitedHealthcare medical benefit prior authorization for treatment of moderately to severely active Crohn's disease

**OR**

**2.4** BOTH of the following:

- Patient is currently on ustekinumab therapy for moderately to severely active Crohn's disease as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of ustekinumab\*

**AND**

**3** - If the request is for a non-formulary ustekinumab product, the patient has a history of failure to all formulary ustekinumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary ustekinumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Skyrizi (risankizumab)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist

| <p><b>Approval Criteria</b></p>       |                       |

**1 - Diagnosis of moderately to severely active ulcerative colitis**

**AND**

**2 - ONE of the following:**

**2.1** Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Simponi (golimumab), Xeljanz (tofacitinib)]

**OR**

**2.3** Patient has been established on therapy with ustekinumab under an active UnitedHealthcare medical benefit prior authorization for treatment of moderately to severely active ulcerative colitis

**OR**

**2.4 BOTH of the following:**

- Patient is currently on ustekinumab therapy for moderately to severely active ulcerative colitis as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of ustekinumab\*

**AND**

**3 - If the request is for a non-formulary ustekinumab product, the patient has a history of failure to all formulary ustekinumab products unless the prescriber has given a clinical reason**

or special circumstance why the patient is unable to use a formulary ustekinumab product (please document reason/special circumstances) [b]

**AND**

**4** - Patient is not receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Skyrizi (risankizumab)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Ustekinumab is a human interleukin-12 and -23 antagonist indicated for the treatment of adult and pediatric patients 6 years of age or older with active psoriatic arthritis and for moderate to severe plaque psoriasis who are candidates for phototherapy or systemic therapy. It is also indicated in adult patients with moderately to severely active Crohn's disease and for moderately to severely active ulcerative colitis.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.
- The intravenous infusion is typically covered under the medical benefit. Please refer to the UnitedHealthcare Drug Policy for Stelara.

| <p><b>Background:</b></p> <p>Valchlor gel for topical use (mechlorethamine) is an alkylating drug indicated for the topical treatment of Stage IA and IB mycosis fungoides-type cutaneous T-cell lymphoma in patients who have received prior skin-directed therapy. [1]. The National Cancer Comprehensive Network (NCCN) recommends use of topical mechlorethamine in T-cell leukemia/lymphoma, primary cutaneous B-cell lymphoma, primary cutaneous CD30+ T-cell lymphoproliferative disorders, and Langerhans Cell Histiocytosis (LCH).[2]</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"><li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program.</li><li>• Supply limits may be in place.</li></ul> |

| Notes                                                                                                                             | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Vanrafia (atrasentan) is indicated to reduce proteinuria in adults with primary immunoglobulin A nephropathy (IgAN) at risk of rapid disease progression, generally a urine protein-to-creatinine ratio (UPCR)  $\geq 1.5$  g/g.

This indication is approved under accelerated approval based on a reduction of proteinuria. It has not been established whether Vanrafia slows kidney function decline in patients with IgAN. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory clinical trial.

#### Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.</p> |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Velsipity (etrasimod) is a sphingosine 1-phosphate receptor modulator indicated for the treatment of moderately to severely active ulcerative colitis in adults.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p>1.1 Diagnosis of newly-diagnosed acute myeloid leukemia (AML)</p> <p style="text-align: center;"><b>AND</b></p> <p>1.2 ONE of the following:</p> <ul style="list-style-type: none"> <li>• Used as treatment induction in candidates for intensive induction therapy</li> <li>• Used as treatment induction in candidates for lower-intensity induction therapy</li> <li>• Used as follow-up after induction therapy following response to previous lower intensity therapy with the same regimen</li> <li>• Used as consolidation therapy as continuation of lower-intensity regimen used for induction</li> </ul> <p style="text-align: center;"><b>AND</b></p> |                              |

**1.3** Used in combination with decitabine, azacitidine, or low-dose cytarabine

**OR**

**2** - ALL of the following:

- Diagnosis of relapsed/refractory acute myeloid leukemia (AML)
- Used as a component of repeating the initial successful induction regimen
- Greater than or equal to 12 months since induction regimen if not administered continuously
- Therapy was not stopped due to development of clinical resistance

**OR**

**3** - ALL of the following:

- Diagnosis of blastic plasmacytoid dendritic cell neoplasm (BPDCN) - acute myeloid leukemia (AML)
- Considered systemic disease and therapy is given as palliative intent
- Patient has low performance and/or nutritional status (i.e., serum albumin less than 3.2 g/dL; not a candidate for intensive remission therapy or Elzonris)
- Venclexta therapy to be given in combination with azacitidine, decitabine, or low-dose cytarabine

| <p><b>Background:</b></p> <p>Venclexta (venetoclax) is a BCL-2 inhibitor indicated for the treatment of adult patients with chronic lymphocytic leukemia (CLL) or small lymphocytic lymphoma (SLL). Venclexta is also indicated in combination with azacitidine, or decitabine, or low-dose cytarabine for the treatment of newly diagnosed acute myeloid leukemia (AML) in adults who are age 75 years or older, or who have comorbidities that preclude use of intensive induction chemotherapy.</p> <p>In addition, the National Cancer Comprehensive Network (NCCN) recommends the use of Venclexta in in acute lymphoblastic leukemia (ALL); in newly diagnosed, relapsed/refractory, and blastic plasmacytoid dendritic cell neoplasm (BPDCN) AML; relapsed/refractory hairy cell leukemia; mantle cell lymphoma as second line or subsequent therapy; in relapsed or progressive multiple myeloma with t(11;14) translocation; for relapsed/refractory systemic light chain amyloidosis with t(11;14) translocation; in previously treated Waldenstrom macroglobulinemia/lymphoplasmacytic lymphoma; in accelerated/blast phase myeloproliferative neoplasm (MPN) with disease progression; and in chronic myelomonocytic leukemia (CMML); and in higher risk myelodysplastic syndromes.</p> <p><b>Additional Clinical Rules:</b></p> |

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

### Approval Criteria

**1** - Diagnosis of moderate to severe vasomotor symptoms due to menopause

**AND**

**2** - History of failure (after a 30-day trial), contraindication or intolerance to one of the following:

- Hormonal therapy (e.g., estradiol, Premarin, Prempro)
- Non-hormonal therapy [e.g., clonidine, gabapentin, selective serotonin inhibitors (e.g., paroxetine), serotonin and norepinephrine reuptake inhibitors (e.g., venlafaxine)]

**AND**

**3** - Patient has received baseline hepatic laboratory tests to rule out the presence of underlying liver disease

| <h3>Approval Criteria</h3> <p><b>1</b> - Documentation of positive clinical response to therapy (e.g., decrease in frequency and severity of vasomotor symptoms from baseline)</p> <p><b>AND</b></p> |                 |

**2** - Patient has received periodic evaluation of hepatic laboratory tests to rule out liver injury associated with Veozah use

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Veozah (fezolinetant) is a neurokinin 3 (NK3) receptor antagonist indicated for the treatment of moderate to severe vasomotor symptoms due to menopause.

Veozah use has been associated with reports of hepatotoxicity in post marketing studies that gradually resolve after discontinuation of Veozah. Baseline hepatic laboratory tests should be evaluated prior to initiation of Veozah.

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**OR**

**4.1.2.2** ALL of the following:

- Used as monotherapy
- Patient has disease progression following endocrine therapy
- Patient has already received at least one prior chemotherapy regimen

**OR**

**4.2** ALL of the following:

**4.2.1** Disease is early breast cancer at high risk of recurrence defined by one of the following (confirmed preoperatively and/or at surgery):

**4.2.1.1** Greater than or equal to 4 positive lymph nodes

**OR**

**4.2.1.2** BOTH of the following:

- 1-3 positive lymph nodes
- Grade 3 disease or tumor size  $\geq 5$  cm)

**AND**

**4.2.2** Used in combination with an aromatase inhibitor (e.g., anastrozole, letrozole, exemestane) or tamoxifen

**AND**

**4.2.3** Use has not exceeded two years in duration

## 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Background:</b><br>Verzenio® (abemaciclib) is a kinase inhibitor indicated in combination with endocrine therapy (tamoxifen or an aromatase inhibitor) for the adjuvant treatment of adult patients with hormone receptor (HR)-positive, human epidermal growth factor 2 (HER2)-negative, node-positive, early breast cancer at high risk of recurrence; in combination with an aromatase inhibitor as initial endocrine-based therapy for the treatment of adult patients with HR- |

positive, HER2-negative advanced or metastatic breast cancer; in combination with fulvestrant for the treatment of adult patients with HR-positive, HER2-negative advanced or metastatic breast cancer with disease progression following endocrine therapy; and as monotherapy for the treatment of adult patients with HR-positive, HER2-negative advanced or metastatic breast cancer with disease progression following endocrine therapy and prior chemotherapy in the metastatic setting.

The National Comprehensive Cancer Network (NCCN) recommends the use of Verzenio similarly for men and premenopausal women treated with ovarian ablation/suppression with recurrent or metastatic HR-positive, HER2-negative breast cancer disease, in combination with an aromatase inhibitor or Faslodex (fulvestrant). The use of an aromatase inhibitor in men with breast cancer is ineffective without concomitant suppression of testicular steroidogenesis. The NCCN recommends the use of Verzenio for 2 years as adjuvant therapy in combination with endocrine therapy in patients with HR-positive, HER2-negative, high risk (i.e.,  $\geq 4$  positive lymph nodes, or 1-3 positive lymph nodes with one or more of the following: Grade 3 disease, tumor size  $\geq 5$  cm) disease. The NCCN also recommends Verzenio for estrogen receptor (ER)-positive recurrent or metastatic endometrial carcinoma in combination with letrozole.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Vijoice (alpelisib) is a kinase inhibitor indicated for the treatment of adult and pediatric patients 2 years of age and older with severe manifestations of PIK3CA-Related Overgrowth Spectrum (PROS) who require systemic therapy. This indication is approved under accelerated approval based on response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial(s).

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## Approval Criteria

1 - Documentation of positive clinical response to Vitrakvi therapy

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

#### Background

Vitrakvi® (larotrectinib) is a kinase inhibitor indicated for the treatment of adult and pediatric patients with solid tumors that:

- have a neurotrophic receptor tyrosine kinase (NTRK) gene fusion without a known acquired resistance mutation,
- are metastatic or where surgical resection is likely to result in severe morbidity, and
- have no satisfactory alternative treatments or that have progressed following treatment.

This indication is approved under accelerated approval based on overall response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trials.[1]

| <b>Recurrent vulvovaginal candidiasis</b> Indicated to reduce the incidence of recurrent vulvovaginal candidiasis (RVVC) in females with a history of RVVC who are not of reproductive potential. |

## 2 . Criteria

|                                 |               |
|---------------------------------|---------------|
| <b>Product Name:</b> Vivjoa [a] |               |
| Approval Length                 | 4 month(s)    |
| Guideline Type                  | Non Formulary |

### Approval Criteria

1 - Diagnosis of recurrent vulvovaginal candidiasis

**AND**

2 - Patient is not of reproductive potential (i.e., persons who are biological females who are postmenopausal or have another reason for permanent infertility [(e.g., tubal ligation, hysterectomy, salpingo-oophorectomy)])

**AND**

3 - Both of the following:

- Other causes (including but not limited to bacterial vaginosis or trichomoniasis) have been ruled out
- Failure of a maintenance course of oral fluconazole defined as 100-mg, 150-mg, or 200-mg taken weekly for 6 months.

**AND**

4 - Prescribed by or in consultation with one of the following:

- Infectious disease physician
- Obstetrician/Gynecologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

**Background:**

Vivjoa (oteseconazole) is an azole antifungal indicated to reduce the incidence of recurrent vulvovaginal candidiasis (RVVC) in females with a history of RVVC who are not of reproductive potential.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Guideline Type                                     | Prior Authorization       |

### Approval Criteria

1 - Documentation of positive clinical response to Votrient therapy

#### Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Votrient (pazopanib) is a kinase inhibitor indicated for the treatment of advanced renal cell carcinoma and advanced soft tissue sarcoma in patients who have received prior chemotherapy. [1]

Additionally, the National Comprehensive Cancer Network (NCCN) recommends use of Votrient in treatment of medullary, follicular, oncocytic, and papillary thyroid carcinomas; ovarian cancer; additional soft tissue sarcomas, chondrosarcoma, uterine sarcoma, merkel cell carcinoma, and gastrointestinal stromal tumors (GIST).

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Clostridioides difficile infection (CDI)</b> Indicated indicated to prevent the recurrence of Clostridioides difficile infection (CDI) in individuals 18 years of age and older following antibacterial treatment for recurrent CDI (rCDI). |

## 2 . Criteria

|                               |               |
|-------------------------------|---------------|
| <b>Product Name:Vowst [a]</b> |               |
| Approval Length               | 1 month(s)    |
| Guideline Type                | Non Formulary |

### **Approval Criteria**

**1** - Diagnosis of recurrent *Clostridioides difficile* infection (rCDI) as defined by BOTH of the following:

- Presence of diarrhea defined as a passage of 3 or more loose bowel movements within a 24-hour period for 2 consecutive days
- A positive stool test for *Clostridioides difficile* toxin

**AND**

**2** - Patient is 18 years of age or older

**AND**

**3** - Patient has had one or more recurrences of CDI following an initial episode of CDI

**AND**

**4** - Patient has completed at least 10 days of oral vancomycin for rCDI 2 to 4 days prior to initiating Vowst^:

**AND**

**5** - Previous episode of CDI is under control [e.g., less than 3 unformed/loose (i.e., Bristol Stool Scale type 6-7) stools/day for 2 consecutive days]

**AND**

**6** - Patient will drink magnesium citrate on the day before and at least 8 hours prior to taking the first dose of Vowst

**AND**

7 - Prescribed by or in consultation with ONE of the following:

- Gastroenterologist
- Infectious disease specialist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. ^Tried/failed alternative(s) are supported by FDA labeling and/or treatment guidelines.

| <p><b>Background:</b></p> <p>Voxzogo (vosoritide) is a C type natriuretic peptide (CNP) analog indicated to increase linear growth in pediatric patients with achondroplasia with open epiphyses. This indication is approved under accelerated approval based on an improvement in annualized growth velocity. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trial(s).</p> <p><b>Additional Clinical Programs:</b></p> <ul style="list-style-type: none"> <li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li> <li>• Supply Limits may also be in place</li> </ul> |

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
|---------------------------------------------|

**Background:**

Vtama cream is an aryl hydrocarbon receptor agonist indicated for the topical treatment of plaque psoriasis in adults and the topical treatment of atopic dermatitis in adults and pediatric patients 2 years of age and older. [1]

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

**AND**

**3** - Patient has New York Heart Association (NYHA) Functional Class I, II, or III heart failure

**AND**

**4** - Physician attests that the patient has an N-terminal pro-B-type natriuretic peptide (NT-proBNP) level that, when combined with signs and symptoms, is considered definitive for a diagnosis of ATTR-CM

**AND**

**5** - ONE of the following:

- History of heart failure, with at least one prior hospitalization for heart failure
- Presence of clinical signs and symptoms of heart failure (e.g., dyspnea, edema)

**AND**

**6** - Prescribed by or in consultation with a cardiologist

**AND**

**7** - Patient is not receiving Vyndaqel/Vyndamax in combination with an RNA-targeted therapy for ATTR amyloidosis [i.e., Amvuttra (vutrisiran), Attruby (acoramadis), Onpattro (patisiran), Tegsedi (inotersen), or Wainua (eplontersen)]

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.  
\*May require prior authorization and notification.

Product Name:Vyndaqel, Vyndamax [a]

Diagnosis

Transthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM)

### 3 . Background

|                                             |
|---------------------------------------------|
| <b>Benefit/Coverage/Program Information</b> |
| <b>Background:</b>                          |

Vyndaqel® (tafamidis meglumine) and Vyndamax™ (tafamidis) are transthyretin stabilizers indicated for the treatment of the cardiomyopathy of wild type or hereditary transthyretin-mediated amyloidosis in adults to reduce cardiovascular mortality and cardiovascular-related hospitalization.<sup>1</sup>

**Additional Clinical Programs:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Patient has required four or more courses of plasmapheresis/plasma exchanges and/or immune globulin over the course of at least 12 months without symptom control

**AND**

**6** - Patient is NOT receiving Vyvgart Hytrulo in combination with ANY of the following for treatment of the same indication:

- A complement inhibitor [e.g., eculizumab, Ultomiris (ravulizumab), Zilbrysq (zilucoplan)]
- Another FcRn blocker [e.g., Imaavy (nipocalimab), Rystiggo (rozanolixizumab)]
- Immune globulin (e.g., Gammagard, Privigen, Hizentra)

**AND**

**7** - Prescribed by or in consultation with a neurologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records (e.g., chart notes, laboratory tests) demonstrating ALL of the following:</p> <ul style="list-style-type: none"> <li>• Improvement and/or maintenance of at least a 2-point improvement (reduction in score) in the MG-ADL score from pre-treatment baseline</li> <li>• Reduction in signs and symptoms of myasthenia gravis</li> <li>• Maintenance, reduction, or discontinuation of dose(s) of baseline immunosuppressive therapy (IST) prior to starting Vyvgart Hytrulo. Note: Add on, dose escalation of IST, or</li> </ul> |                               |

additional rescue therapy from baseline to treat myasthenia gravis or exacerbation of symptoms while on Vyvgart Hytrulo therapy will be considered as treatment failure

**AND**

**2** - Patient is NOT receiving Vyvgart Hytrulo in combination with ANY of the following for treatment of the same indication:

- A complement inhibitor [e.g., eculizumab, Ultomiris (ravulizumab), Zilbrysq (zilucoplan)]
- Another FcRn blocker [e.g., Imaavy (nipocalimab), Rystiggo (rozanolixizumab)]
- Immune globulin (e.g., Gammagard, Privigen, Hizentra)

**AND**

**3** - Prescribed by or in consultation with a neurologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of chronic inflammatory demyelinating polyneuropathy (CIDP)</p> <p><b>AND</b></p> <p><b>2</b> - ALL of the following:</p> <p><b>2.1</b> Progressive symptoms present for at least 2 months</p> |                                                          |

**AND**

**2.2** Symptomatic polyradiculoneuropathy as indicated by progressive or relapsing motor or sensory impairment of more than one limb

**AND**

**2.3** Electrodiagnostic findings (consistent with EFNS/PNS guidelines for definite CIDP) indicating the presence of at least ONE of the following:

- Motor distal latency prolongation in 2 nerves
- Reduction of motor conduction velocity in 2 nerves
- Prolongation of F-wave latency in 2 nerves
- Absence of F-waves in at least 1 nerve
- Partial motor conduction block of at least 1 motor nerve
- Abnormal temporal dispersion in at least 2 nerves
- Distal CMAP duration increase in at least 1 nerve

**AND**

**3** - Trial and failure (after a trial of at least two months b), contraindication, or intolerance to a corticosteroid (e.g., prednisone, methylprednisolone)

**AND**

**4** - ONE of the following:

**4.1** Trial and failure (after a trial of at least three months b) to an immune globulin (e.g., Gammagard, Privigen, Hizentra) with the maximally allowable and/or tolerated dose

**OR**

**4.2** BOTH of the following:

- Intolerance to ALL immune globulins (e.g., Gammagard, Privigen, Hizentra)
- Dose has been adjusted or escalated to the maximally allowable and/or tolerated dose

Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

#### Benefit/Coverage/Program Information

**Background:**

Wainua (eplontersen) is a transthyretin-directed antisense oligonucleotide indicated for the treatment of the polyneuropathy of hereditary transthyretin-mediated (hATTR) amyloidosis in adults.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <p><b>Approval Criteria</b></p> <p>1 - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of narcolepsy without cataplexy (i.e., Narcolepsy Type 2) with BOTH of the following:</p> <ul style="list-style-type: none"> <li>The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months</li> <li>A mean sleep latency of <math>\leq 8</math> minutes and two or more sleep onset REM periods (SOREMPs) are found on a MSLT performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep</li> </ul> |                                                        |

onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT

**AND**

**2 - Physician attestation to the following:**

- Other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)

**AND**

**3 - ONE of the following:**

**3.1 History of failure, contraindication, or intolerance of ALL of the following:**

- an amphetamine (e.g., amphetamine, dextroamphetamine) or methylphenidate based stimulant
- modafinil (generic Provigil) or armodafinil (generic Nuvigil)
- Sunosi

**OR**

**3.2 History of or potential for a substance abuse disorder**

**AND**

**4 - Prescribed by ONE of the following:**

- Neurologist
- Psychiatrist
- Pulmonologist
- Sleep Medicine Specialist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Treatment is being requested to reduce the risk of major adverse cardiovascular events</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Patient is 45 years of age or older</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - Submission of medical records documenting ALL the following:</p> <p><b>3.1</b> BMI <math>\geq</math> 27 kg/m<sup>2</sup></p> <p style="text-align: center;"><b>AND</b></p> <p><b>3.2</b> Established cardiovascular disease as evidenced by ONE of the following:</p> <p><b>3.2.1</b> Prior myocardial infarction (MI)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>3.2.2</b> Prior ischemic or hemorrhagic stroke</p> <p style="text-align: center;"><b>OR</b></p> <p><b>3.2.3</b> Symptomatic peripheral arterial disease (PAD) evidenced by one of the following:</p> <ul style="list-style-type: none"><li>• Intermittent claudication with ankle-brachial index (ABI) less than 0.85 (at rest)</li><li>• Peripheral arterial revascularization procedure</li><li>• Amputation due to atherosclerotic disease</li></ul> |                     |

**AND**

**4** - Used in combination with a reduced calorie diet and increased physical activity

**AND**

**5** - ONE of the following:

**5.1** For patients with history of MI, ONE of the following:

**5.1.1** Patient is on therapy from each of the following classes (as confirmed by claims history or submission of medical records):

- cholesterol lowering medication (e.g. statin, PCSK9i)
- beta blocker (i.e., carvedilol, metoprolol, or bisoprolol)
- angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)
- antiplatelet (e.g. aspirin, clopidogrel)

**OR**

**5.1.2** Patient has a history of intolerance or contraindication to all of the following therapeutic classes (please specify intolerance or contraindication):

- cholesterol lowering medication (e.g. statin, PCSK9i)
- beta blocker (i.e., carvedilol, metoprolol, or bisoprolol)
- angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)
- antiplatelet (e.g. aspirin, clopidogrel)

**OR**

**5.2** For patients with history of ischemic or hemorrhagic stroke, ONE of the following:

**5.2.1** Patient is on therapy from each of the following classes (as confirmed by claims history or submission of medical records):

- cholesterol lowering medication (e.g. statin, PCSK9i)
- angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)

- antiplatelet (e.g. aspirin, clopidogrel)

**OR**

**5.2.2** Patient has a history of intolerance or contraindication to all of the following therapeutic classes (please specify intolerance or contraindication):

- cholesterol lowering medication (e.g. statin, PCSK9i)
- angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)
- antiplatelet (e.g. aspirin, clopidogrel)

**OR**

**5.3** For patients with history of symptomatic PAD, ONE of the following:

**5.3.1** Patient is on therapy from each of the following classes (as confirmed by claims history or submission of medical records):

- cholesterol lowering medication (e.g. statin, PCSK9i)
- angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)
- antiplatelet (e.g. aspirin, clopidogrel)

**OR**

**5.3.2** Patient has a history of intolerance or contraindication to all of the following therapeutic classes (please specify intolerance or contraindication):

- cholesterol lowering medication (e.g. statin, PCSK9i)
- angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)
- antiplatelet (e.g. aspirin, clopidogrel)

**AND**

**6** - Patient does NOT have either of the following:

- Diagnosis of diabetes or HgA1c > 6.5%
- New York Heart Association class IV heart failure

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | <p>[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.</p> <p>* Note: Wegovy when used solely for the treatment of weight loss is excluded and is to be denied as a benefit exclusion. Wegovy will not be covered for any treatment other than to reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke). Any request outside this indication is an exclusion.</p> |

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background

Wegovy is a glucagon-like peptide-1 (GLP-1) receptor agonist indicated in combination with a reduced calorie diet and increased physical activity to reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke) in adults with established cardiovascular disease and either obesity or overweight.

Wegovy is also indicated to reduce excess body weight and maintain weight reduction long term in adults and pediatric patients aged 12 years and older with obesity, and in adults with overweight in the presence of at least one weight-related comorbid condition.

Medications for the purpose of weight loss are typically a benefit exclusion. The program allows for coverage of Wegovy for the cardiovascular risk reduction indication.

##### Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Guideline Type              | Non Formulary   |
| Approval Criteria           |                 |

**1** - Documentation of a positive clinical response to Winrevair therapy [e.g., improvement in symptoms of right heart failure, exercise tolerance, six-minute walk distance (6MWD), resting and ambulatory oximetry]

**AND**

**2** - Prescribed by, or in consultation with, a cardiologist, pulmonologist, or rheumatologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Winrevair (sotatercept-csrk) is an activin signaling inhibitor indicated for the treatment of adults with pulmonary arterial hypertension (PAH, WHO Group 1) to increase exercise capacity, improve WHO functional class (FC) and reduce the risk of clinical worsening events. [1]

##### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Demodex blepharitis</b> Indicated for the treatment of Demodex blepharitis. |

## 2 . Criteria

|                                 |               |
|---------------------------------|---------------|
| <b>Product Name:</b> Xdemvy [a] |               |
| <b>Approval Length</b>          | 3 month(s)    |
| <b>Guideline Type</b>           | Non Formulary |

### Approval Criteria

**1** - Diagnosis of DEMODEX blepharitis

**AND**

**2** - Patient demonstrates ONE of the following signs of DEMODEX infestation:

- Cylindrical cuff at the root of the eyelashes
- Lid margin erythema
- Eyelash anomalies (eyelash misdirection)

**AND**

**3** - Patient demonstrates TWO of the following symptoms of DEMODEX infestation

- Itching/Burning
- Foreign body sensation
- Crusting/matter lashes
- Blurry vision
- Discomfort/irritation

**AND**

**4** - Patient is practicing good eye-lid hygiene (e.g., non-prescription tree-tea oil)

**AND**

**5** - Prescribed by, or in consultation with, ONE of the following:

- Ophthalmologist
- Optometrist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 1 . Indications

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Xeljanz /Xeljanz XR (tofacitinib)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p><b>Rheumatoid Arthritis</b> Indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response or intolerance to one or more TNF blockers. It may be used as monotherapy or in combination with methotrexate or other non-biologic disease-modifying antirheumatic drugs (DMARDs).</p> <p><b>Psoriatic Arthritis</b> Indicated for the treatment of adult patients with active psoriatic arthritis who have an inadequate response or intolerance to one or more TNF blockers.</p> <p><b>Ulcerative Colitis</b> Indicated for the treatment of adult patients with moderately to severely active ulcerative colitis, who have an inadequate response or intolerance to one or more TNF blockers.</p> |

**Ankylosing Spondylitis** Indicated for the treatment of active ankylosing spondylitis in patients who have an inadequate response or intolerance to one or more TNF blockers.

**Drug Name: Xeljanz / Xeljanz Solution (tofacitinib)**

**Polyarticular Course Juvenile Idiopathic Arthritis** Indicated for the treatment of active polyarticular course juvenile idiopathic arthritis in patients 2 years of age and older who have had an inadequate response or intolerance to one or more TNF blockers.

## 2 . Criteria

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Prior Authorization       |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of moderately to severely active RA</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 BOTH of the following:</p> <p>2.1.1 ONE of the following:</p> <p>2.1.1.1 History of failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)</p> <p style="text-align: center;"><b>OR</b></p> |                           |

**2.1.1.2** Patient has been previously treated with targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.1.2** ONE of the following:

- History of failure, contraindication, or intolerance to at least ONE TNF inhibitor^
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5])

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is currently on Xeljanz or Xeljanz XR therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)

**AND**

**2.2.2** Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer sponsored XELSOURCE program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Xeljanz or Xeljanz XR\*

**AND**

**3** - Patient is not receiving Xeljanz or Xeljanz XR in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of active PsA</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> <p>2.1 BOTH of the following:</p> <p>2.1.1 ONE of the following:</p> <p>2.1.1.1 History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)</p> <p style="text-align: center;"><b>OR</b></p> <p>2.1.1.2 Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]</p> <p style="text-align: center;"><b>AND</b></p> <p>2.1.2 ONE of the following:</p> |                           |

**2.1.2.1** History of failure, contraindication, or intolerance to at least one TNF inhibitor^

**OR**

**2.1.2.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5])

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is currently on Xeljanz or Xeljanz XR therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)

**AND**

**2.2.2** Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer sponsored XELSOURCE program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Xeljanz or Xeljanz XR\*

**AND**

**3** - Patient is not receiving Xeljanz or Xeljanz XR in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Rinvoq (upadacitinib), Olumiant (baricitinib), Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Rheumatologist

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

|                                         |                         |
|-----------------------------------------|-------------------------|
| Product Name: Xeljanz or Xeljanz XR [a] |                         |
| Diagnosis                               | Ulcerative Colitis (UC) |
| Approval Length                         | 12 month(s)             |
| Therapy Stage                           | Initial Authorization   |
| Guideline Type                          | Prior Authorization     |

**Approval Criteria**

1 - Diagnosis of moderately to severely active UC

**AND**

2 - ONE of the following:

2.1 BOTH of the following:

2.1.1 ONE of the following:

2.1.1.1 Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine)

**OR**

2.1.1.2 Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Simponi (golimumab), ustekinumab, Rinvoq (upadacitinib)]

**AND**

2.1.2 ONE of the following:

2.1.2.1 History of failure, contraindication, or intolerance to at least ONE TNF inhibitor^

**OR**

**2.1.2.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5])

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is currently on Xeljanz or Xeljanz XR therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)

**AND**

**2.2.2** Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer sponsored XELSOURCE program (e.g. sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Xeljanz or Xeljanz XR\*

**AND**

**3** - Patient is not receiving Xeljanz or Xeljanz XR in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib), ustekinumab, Skyrizi (risankizumab)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with a gastroenterologist

Notes

\*Patients requesting initial authorization who were established on therapy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from the Pfizer sponsored XELSOURCE program shall be required to meet initial authorization criteria as if patient were new to therapy.

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

^Tried/Failed alternatives(s) are supported by FDA labeling.

**AND**

**2 - ONE of the following:**

**2.1 BOTH of the following:**

**2.1.1 ONE of the following:**

**2.1.1.1** History of failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

**OR**

**2.1.1.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Rinvoq (upadacitinib)]

**AND**

**2.1.2 ONE of the following:**

**2.1.2.1** History of failure, contraindication, or intolerance to at least ONE TNF inhibitor<sup>^</sup>

**OR**

**2.1.2.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5])

**OR**

**2.2 BOTH of the following:**

- Patient is currently on Xeljanz or Xeljanz XR therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer sponsored XELSOURCE program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Xeljanz or Xeljanz XR\*

**AND**

**3** - Patient is not receiving Xeljanz or Xeljanz XR in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

### Approval Criteria

**1** - Diagnosis of active polyarticular course juvenile idiopathic arthritis

**AND**

**2** - ONE of the following:

**2.1** History of failure, contraindication, or intolerance to one of the preferred adalimumab products [b] (document date and duration of trial)

**OR**

**2.2** Patient has a documented needle-phobia to the degree that the patient has previously

refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria 5)

**OR**

**2.3 BOTH of the following:**

- Patient is currently on Xeljanz or Xeljanz XR therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer sponsored XELSOURCE program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Xeljanz or Xeljanz XR\*

**AND**

**3 -** Patient is not receiving Xeljanz or Xeljanz Solution in combination with EITHER of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Olumiant (baricitinib), Rinvoq (upadacitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4 -** Prescribed by or in consultation with a rheumatologist

| Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Background:</b></p> <p>Xeljanz/Xeljanz XR (tofacitinib) is an inhibitor of Janus Kinases (JAKs) indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response or intolerance to one or more tumor necrosis factor (TNF) blockers. It may be used as monotherapy or in combination with methotrexate or other non-biologic disease-modifying antirheumatic drugs (DMARDs). [1] Examples of non-biologic DMARDs commonly used in the treatment of rheumatoid arthritis include methotrexate, leflunomide, and sulfasalazine. [2,3] Xeljanz/Xeljanz XR is also indicated for the treatment of adult patients with active psoriatic arthritis, active ankylosing spondylitis, and moderately to severely active ulcerative colitis, who have an inadequate response or intolerance to one or</p> |

more TNF blockers. Xeljanz/Xeljanz Solution is indicated for the treatment of active polyarticular juvenile idiopathic arthritis in patients 2 years of age and older who have had an inadequate response or intolerance to one or more TNF blockers

**Limitations of Use:**

The use of Xeljanz/Xeljanz XR/Xeljanz Solution in combination with biologic DMARDs or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Asthma                |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 12 month(s)           |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Initial Authorization |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p>1 - Xolair for self-administration will be approved based on ONE of the following:</p> <p><b>1.1 ALL of the following:</b></p> <p><b>1.1.1</b> Patient has been established on therapy with Xolair for moderate to severe persistent asthma under an active UnitedHealthcare medical benefit prior authorization</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.1.2</b> Documentation of positive clinical response to Xolair therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Reduction in the frequency of exacerbations</li> <li>• Decreased utilization of rescue medications</li> <li>• Increase in percent predicted FEV1 from pretreatment baseline</li> </ul> |                       |

- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)

**AND**

**1.1.3** Xolair is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

**AND**

**1.1.4** Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**OR**

**1.2** ALL of the following:

**1.2.1** Diagnosis of moderate or severe asthma

**AND**

**1.2.2** Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:

- Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**1.2.3** Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting a baseline (pre-omalizumab treatment) serum total IgE (immunoglobulin E) level greater than or equal to 30 IU/mL (international units/milliliter) and less than or equal to 1300 IU/mL

**AND**

**1.2.4** Positive skin test or in vitro reactivity to a perennial aeroallergen

**AND**

**1.2.5** Used in combination with ONE of the following:

**1.2.5.1** One maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2-agonist (LABA) product [e.g., fluticasone propionate/salmeterol (AirDuo/Advair), budesonide/formoterol (Symbicort)]

**OR**

**1.2.5.2** Combination therapy including BOTH of the following:

- One maximally-dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]
- One additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist - montelukast (Singulair); theophylline]

**AND**

**1.2.6** Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**3** - Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Xolair prefilled syringe and prefilled autoinjector [a]

Diagnosis Chronic Urticaria

Approval Length 12 month(s)

Therapy Stage Initial Authorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - Xolair for self-administration will be approved based on ONE of the following:

**1.1** ALL of the following:

**1.1.1** Patient has been established on therapy with Xolair for chronic urticaria under an active UnitedHealthcare medical benefit prior authorization

**AND**

**1.1.2** Documentation of positive clinical response to Xolair therapy (e.g., reduction in exacerbations, itch severity, hives)

**AND**

**1.1.3** Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**OR**

**1.2** ALL of the following:

**1.2.1** Diagnosis of chronic urticaria

**AND**

**1.2.2** ONE of the following:

**1.2.2.1** Patient remains symptomatic despite at least a 2-week trial of, or history of contraindication or intolerance to, TWO H1-antihistamines [e.g., Allegra (fexofenadine), Benadryl (diphenhydramine), Claritin (loratadine)]\*^

**OR**

**1.2.2.2** Patient remains symptomatic despite at least a 2-week trial of, or history of contraindication or intolerance to BOTH of the following taken in combination: ^

**1.2.2.2.1** Second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

**AND**

**1.2.2.2.2** ONE of the following:

- Different second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]
- First generation H1-antihistamine [e.g., Benadryl (diphenhydramine), Chlor-Trimeton (chlorpheniramine), Vistaril (hydroxyzine)]\*
- H2-antihistamine [e.g., Pepcid (famotidine), Tagamet HB (cimetidine), Zantac (ranitidine)]

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

- Leukotriene modifier [e.g., Singulair (montelukast)]

**AND**

**1.2.3** Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**1.2.4** Prescribed by ONE of the following:

- Allergist
- Dermatologist
- Immunologist

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

**Approval Criteria**

**1** - Xolair for self-administration will be approved based on ONE of the following:

**1.1** ALL of the following:

**1.1.1** Patient has been established on therapy with Xolair for nasal polyps under an active UnitedHealthcare medical benefit prior authorization

**AND**

**1.1.2** Documentation of positive clinical response to Xolair therapy

**AND**

**1.1.3** Patient will continue to receive Xolair as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

**AND**

**1.1.4** Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**OR**

**1.2** ALL of the following:

**1.2.1** Diagnosis of nasal polyps

**AND**

**1.2.2** TWO OR MORE of the following symptoms for longer than 12 weeks duration:

- Nasal mucopurulent discharge
- Nasal obstruction, blockage, or congestion
- Facial pain, pressure, and/or fullness
- Reduction or loss of sense of smell

**AND**

**1.2.3** ONE of the following findings using nasal endoscopy and/or sinus computed tomography (CT):

- Purulent mucus or edema in the middle meatus or ethmoid regions
- Polyps in the nasal cavity or the middle meatus

- Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

**AND**

**1.2.4 ONE of the following:**

**1.2.4.1 Patient has required prior sinus surgery**

**OR**

**1.2.4.2 Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for nasal polyps in the previous 2 years**

**OR**

**1.2.4.3 Patient has been unable to obtain symptom relief after trial of BOTH of the following:**

- Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)^
- ONE other therapy used in the management of nasal polyps [i.e., nasal saline irrigations. antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)]

**AND**

**1.2.5 Patient will receive Xolair as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)**

**AND**

**1.2.6 Patient is not receiving Xolair in combination with any of the following:**

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-interleukin-4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

|                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                 |

| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | IgE-Mediated Food Allergy |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 12 month(s)               |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Initial Authorization     |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Prior Authorization       |
| <p><b>Approval Criteria</b></p> <p>1 - ALL of the following:</p> <p>1.1 Patient has been established on therapy with Xolair for IgE-mediated food allergy under an active UnitedHealthcare medical benefit prior authorization</p> <p style="text-align: center;"><b>AND</b></p> <p>1.2 Documentation of positive clinical response to Xolair therapy (e.g., reduction in type I allergic reactions)</p> <p style="text-align: center;"><b>AND</b></p> <p>1.3 Xolair will be used in conjunction with food allergen avoidance</p> <p style="text-align: center;"><b>AND</b></p> <p>1.4 Patient has access to epinephrine</p> <p style="text-align: center;"><b>AND</b></p> <p>1.5 Patient is not receiving Xolair in combination with ANY of the following:</p> |                           |

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**1.6** Prescribed by an allergist or immunologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of IgE-mediated food allergy to one or more foods

**AND**

**2.2** Patient is aged greater than or equal to 1 year

**AND**

**2.3** IgE-mediated food allergy to specific food(s) has been confirmed by BOTH of the following:

**2.3.1** History of type I allergic reactions (e.g., nausea, vomiting, cramping, diarrhea, flushing, pruritus, urticaria, swelling of the lips, face or throat, wheezing, lightheadedness, syncope)

**AND**

**2.3.2** ONE of the following:

- Skin prick testing (SPT)
- IgE antibody in vitro testing
- Oral food challenge (OFC)

**AND**

**2.4** Xolair will be used in conjunction with food allergen avoidance

**AND**

**2.5** Patient has access to epinephrine

**AND**

**2.6** Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**2.7** Prescribed by an allergist or immunologist

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background

Xolair (omalizumab) is an anti-IgE antibody indicated for:

- Moderate to severe persistent asthma in adults and pediatric patients 6 years of age and older with a positive skin test or in vitro reactivity to a perennial aeroallergen and symptoms that are inadequately controlled with inhaled corticosteroids
- Chronic rhinosinusitis with nasal polyps (CRSwNP) in adult patients 18 years of age and older with inadequate response to nasal corticosteroids, as add-on maintenance treatment
- IgE-mediated food allergy in adult and pediatric patients aged 1 year and older for the reduction of allergic reactions (Type I), including anaphylaxis, that may occur with accidental exposure to one or more foods. To be used in conjunction with food allergen avoidance.
- Chronic spontaneous urticaria (CSU) in adults and adolescents 12 years of age and older who remain symptomatic despite H1 antihistamine treatment

This policy refers to Xolair (omalizumab) subcutaneous injection for self-administered subcutaneous injection. Xolair (omalizumab) for administration by a healthcare professional is obtained under the medical benefit.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| Product Name:Xolremdi [a] |                 |
| Approval Length           | 12 month(s)     |
| Therapy Stage             | Reauthorization |
| Guideline Type            | Non Formulary   |

### Approval Criteria

1 - Documentation of positive clinical response [e.g., improvement in absolute neutrophil counts (ANC), improvement in absolute lymphocyte counts (ALC), reduction in infections] to Xolremdi therapy

**AND**

2 - Prescribed by or in consultation with one of the following:

- Allergist
- Geneticist
- Hematologist
- Immunologist

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Xolremdi™ (mavorixafor) is a CXC chemokine receptor 4 antagonist indicated in patients 12 years of age and older with WHIM syndrome (warts, hypogammaglobulinemia, infections and myelokathexis) to increase the number of circulating mature neutrophils and lymphocytes.

#### Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limit may be in place.

| <b>Drug Name: Xospata (gilteritinib)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p><b>Acute myeloid leukemia</b> Indicated for the treatment of adult patients who have relapsed or refractory acute myeloid leukemia (AML) with an FMS-like tyrosine kinase 3 (FLT3) mutation as detected by an FDA-approved test.</p> <p><b>Other Uses</b> The National Cancer Comprehensive Network (NCCN) recommends the use of Xospata for the treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. NCCN also recommends Xospata for treatment of AML for relapsed/refractory disease as targeted therapy in patients with FLT3 mutation (ITD or TKD), in patients with FLT3 mutation for low-intensity treatment induction when not a candidate for intensive induction therapy, follow-up treatment after induction therapy following response to previous lower intensity therapy with the same regimen, consolidation therapy as continuation therapy as continuation of low-intensity regimen used for induction in patients with poor-risk AML, or for maintenance therapy as a single agent in patients who are post-</p> |

allogeneic hematopoietic cell transplantation, in remission, and have a history of FLT3 mutation.

| <p><b>Background</b></p> <p>Xospata (gilteritinib) is a kinase inhibitor indicated for the treatment of adult patients who have relapsed or refractory acute myeloid leukemia (AML) with an FMS-like tyrosine kinase 3 (FLT3) mutation as detected by an FDA-approved test.</p> <p>The National Cancer Comprehensive Network (NCCN) recommends the use of Xospata for the treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. NCCN also recommends Xospata for treatment of AML for relapsed/refractory disease as targeted therapy in patients with FLT3 mutation (ITD or TKD), in patients with FLT3 mutation for low-intensity treatment induction when not a candidate for intensive induction therapy, follow-up treatment after induction therapy following response to previous lower intensity therapy with the same regimen, consolidation therapy as continuation therapy as continuation of low-intensity regimen used for induction in patients with poor-risk AML, or for maintenance therapy as a single agent in patients who are post-allogeneic hematopoietic cell transplantation, in remission, and have a history of FLT3 mutation.</p> |

#### **Additional Clinical Rules**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Benefit/Coverage/Program Information</b>                                                                                                                                                                                                                                            |
| <b>Background:</b><br><br>Xtandi® (enzalutamide) is an androgen receptor inhibitor indicated for the treatment of patients with castration-resistant prostate cancer (CRPC), metastatic castration-sensitive prostate cancer (mCSPC), and non-metastatic castration-sensitive prostate |

cancer (nmCSPC) with biochemical recurrence at high risk for metastasis (high-risk BCR).

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

**1 - Documentation demonstrating reduction in symptoms of excessive daytime sleepiness associated with therapy**

|       |                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Product Name:**Xywav [a]

|                 |                        |
|-----------------|------------------------|
| Diagnosis       | Idiopathic Hypersomnia |
| Approval Length | 12 month(s)            |
| Therapy Stage   | Initial Authorization  |
| Guideline Type  | Prior Authorization    |

**Approval Criteria**

**1 - Submission of medical records (e.g. chart notes, lab values) documenting a diagnosis of idiopathic hypersomnia with BOTH of the following:**

- The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months
- A mean sleep latency of less than 8 minutes and fewer than two REM periods (SOREMPs) are found on a MSLT performed according to standard techniques following a normal overnight polysomnogram, or no SOREMPs if the REM sleep latency on the preceding polysomnogram was less than 15 minutes

**AND**

**2 - Physician attestation to the following:**

- Other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)

**AND**

**3 - History of failure, contraindication, or intolerance of BOTH of the following:**

**3.1 ONE of the following:**

- Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)
- Methylphenidate based stimulant

**AND**

**3.2 ONE of the following:**

- modafinil (generic Provigil)
- armodafinil (generic Nuvigil)

**AND**

**4 - Prescribed by ONE of the following:**

- Neurologist
- Psychiatrist
- Pulmonologist
- Sleep Medicine Specialist

### 3 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Additional Clinical Rules</b></p> <ul style="list-style-type: none"><li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li><li>• Supply limits may be in place.</li></ul> <p><b>Background</b></p> <p>Lumryz, Xyrem (sodium oxybate) and Xywav are central nervous system depressants indicated for the treatment of excessive daytime sleepiness (EDS) or cataplexy in patients with narcolepsy. Xywav is also indicated for idiopathic hypersomnia (IH) in adults.</p> <p>Lumryz, Xyrem and Xywav are classified as a Schedule III controlled substance by Federal law. The active ingredient, sodium oxybate or gamma-hydroxybutyrate (GHB), is listed in the most restrictive schedule of the Controlled Substances Act (Schedule I). Thus, non-medical uses are classified under Schedule I.</p> <p>Lumryz, Xyrem and Xywav are available only through a REMS program with restricted distribution. The REMS Program provides educational materials to the prescriber and the patient explaining the risks and proper use of Lumryz, Xyrem and Xywav, and the required prescription form. Once it is documented that the patient has read and/or understood the materials, the drug will be shipped to the patient. The REMS Program also recommends patient follow-up every 3 months. Physicians are expected to report all serious adverse events to the manufacturer.</p> |

- Patient has symptomatic disease

**OR**

**2.3** ALL of the following:

**2.3.1** Disease is non-metastatic

**AND**

**2.3.2** Life expectancy > 5 years

**AND**

**2.3.3** ONE of the following:

- Positive pelvic persistence/recurrence after radical prostatectomy (RP)
- Lymph node metastases after RP
- Studies positive for regional lymph nodes after radiation therapy

**AND**

**3** - Used in combination with methylprednisolone

**AND**

**4** - ONE of the following:

- Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g. Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Firmagon (degarelix)]
- Patient has had bilateral orchiectomy

**AND**

**5** - ONE of the following:

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Background:</b><br><br><p>Yonsa (abiraterone acetate) is a CYP 17 inhibitor indicated for use in combination with methylprednisolone for the treatment of patients with metastatic castration-resistant prostate cancer. Patients should also receive a gonadotropin-releasing hormone (GnRH) analog concurrently while taking Yonsa or should have had bilateral orchiectomy.</p> <p>The National Comprehensive Cancer Network (NCCN) recommends the use of Yonsa in combination with methylprednisolone and androgen deprivation therapy (ADT) as initial therapy for patients with metastatic or regional node positive prostate cancer if life expectancy is greater than 5 years or symptomatic. Yonsa is recommended in combination with ADT and radiation therapy as initial therapy in patients with very-high-risk group if life expectancy is greater than 5 years or</p> |

symptomatic. Yonsa is also recommended in combination with methylprednisolone and ADT for M0 if life expectancy > 5 years for: prostate-specific antigen (PSA) persistence/recurrence after radical prostatectomy in combination with external beam radiation therapy (EBRT) if studies are positive for pelvic recurrence, undetectable PSA after RP as a treatment consideration if lymph node metastases, PSA recurrence or positive DRE after radiation therapy (RT) if studies positive for regional lymph nodes. Yonsa is recommended for treatment of castration-resistant distant metastatic (M1) disease as secondary hormone therapy or in certain circumstances in combination with methylprednisolone, ADT, and either niraparib or olaparib.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

| <b>Benefit/Coverage/Program Information</b>                                                                                                         |
| <p><b>Background:</b></p> <p>Yorvipath is a parathyroid hormone analog (PTH(1-34)) indicated for the treatment of hypoparathyroidism in adults.</p> |

**Additional Clinical Rules:**

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

| <p><b>The National Cancer Comprehensive Network (NCCN):</b></p> <p>Zelboraf™ (vemurafenib) is a kinase inhibitor indicated for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E mutation as detected by an FDA-approved test. It is also indicated for the treatment of patients with Erdheim-Chester Disease with BRAF V600 mutation. Zelboraf is not recommended for use in patients with wild-type BRAF melanoma.[1]</p> <p>The National Cancer Comprehensive Network (NCCN) guideline recommends use of Zelboraf in combination with Cotellic (cobimetinib) for treatment of central nervous system (CNS) cancer and metastatic or unresectable melanoma with a BRAF V600 mutation (or as a single agent if BRAF/MEK inhibitor combination therapy is contraindicated). Zelboraf is also recommended for the treatment of hairy cell leukemia, non-small cell lung cancer (NSCLC), Langerhans cell histiocytosis (LCH), and follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation. **Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

## 1 . Indications

|                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------|
| <b>Drug Name: Zepbound (tirzepatide)</b>                                                                                   |
| <b>Obstructive sleep apnea</b> Indicated to treat moderate to severe obstructive sleep apnea (OSA) in adults with obesity. |

## 2 . Criteria

|                                   |                       |
|-----------------------------------|-----------------------|
| <b>Product Name:</b> Zepbound [a] |                       |
| Approval Length                   | 6 month(s)            |
| Therapy Stage                     | Initial Authorization |
| Guideline Type                    | Prior Authorization   |

**Approval Criteria**

**1** - Treatment is being requested for obstructive sleep apnea (OSA)

**AND**

**2** - Patient is 18 years of age or older

**AND**

**3** - Submission of medical records confirming ALL of the following:

**3.1** Moderate-to-severe obstructive sleep apnea evidenced by BOTH of the following:

**3.1.1** Sleep study

**AND**

**3.1.2** ONE of the following:

- Apnea Hypopnea Index (AHI)  $\geq 15$
- Respiratory Disturbance Index (RDI)  $\geq 15$
- Respiratory Event Index (REI)  $\geq 15$

**AND**

**3.2** BMI  $\geq 30$  kg/m<sup>2</sup> in the past 6 months

**AND**

**3.3** At least one previous unsuccessful dietary effort to lose weight

**AND**

**3.4 ONE of the following:**

**3.4.1 BOTH of the following:**

- Patient is currently on positive airway pressure (PAP) therapy for at least 3 consecutive months
- Patient is adherent to PAP therapy, defined as  $\geq 4$  hours of use per night for  $\geq 70$  percent of nights

**OR**

**3.4.2** Patient is not a candidate for, or is intolerant to, PAP therapy (e.g., upper airway anatomic abnormalities, etc.)

**AND**

**4 -** Used in combination with a reduced calorie diet and increased physical activity

**AND**

**5 -** Provider attests to BOTH of the following:

- Patient counseled on appropriate positional therapy
- Patient counseled on avoidance of alcohol and/or sedatives before bedtime

**AND**

**6 -** Patient does not have a diagnosis of diabetes or HgA1c  $> 6.5\%$

**AND**

**7 -** Prescriber attests the patient does not have ANY of the following:

- Planned surgery for sleep apnea or obesity
- Significant craniofacial abnormalities
- A diagnosis of central or mixed sleep apnea

**OR**

**1.2** BOTH of the following:

**1.2.1** Patient has been on Zepbound for greater than or equal to 52 weeks of consecutive therapy

**AND**

**1.2.2** Submission of medical records confirming a 50% decrease from baseline in one of the following:

- Apnea Hypopnea Index (AHI)
- Respiratory Disturbance Index (RDI)
- Respiratory Event Index (REI)

**AND**

**2** - Patient has had a weight loss of greater than or equal to 10% of baseline body weight

**AND**

**3** - Used in combination with a reduced calorie diet and increased physical activity

**AND**

**4** - Patient does not have a diagnosis of diabetes or HgA1c > 6.5%

**AND**

**5** - Patient continues to require treatment for obstructive sleep apnea

Notes

[a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.  
Note: Zepbound when used solely for the treatment of weight loss is e

|  |                                                                                                                                                                                             |

| <p><b>Background:</b></p> <p>Zepbound is a glucose-dependent insulintropic polypeptide (GIP) receptor and glucagon-like peptide-1 (GLP-1) receptor agonist indicated to treat moderate to severe obstructive sleep apnea (OSA) in adults with obesity.</p> <p>Zepbound is also indicated in combination with a reduced-calorie diet and increased physical activity to reduce excess body weight and maintain weight reduction long term in adults with obesity or adults with overweight in the presence of at least one weight-related comorbid condition.</p> <p>Medications for the purpose of weight loss are typically a benefit exclusion. The program allows for coverage of Zepbound for obesity with obstructive sleep apnea.</p> <p><b>Additional Clinical Rules:</b></p> <ul style="list-style-type: none"><li>• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</li><li>• Supply limits may be in place.</li></ul> |

**AND**

**2 - ONE of the following:**

**2.1** Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Simponi (golimumab), ustekinumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**AND**

**3 - ONE of the following:**

**3.1** History of failure, contraindication, or intolerance to TWO of the following preferred products (document drug, date, and duration of trial):

- One of the preferred adalimumab products [b]
- Rinvoq (upadacitinib)
- Simponi (golimumab)
- Skyrizi (risankizumab-rzaa)
- One of the preferred ustekinumab products [c]
- Xeljanz/Xeljanz XR (tofacitinib)

**OR**

**3.2 BOTH of the following:**

**3.2.1** Patient is currently on Zeposia therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)

**AND**

**3.2.2** Patient has NOT received a manufacturer supplied sample at no cost in the

2025 UnitedHealthcare Individual and Family Plan Clinical Criteria – Wyoming  
Effective 11.1.2025

prescriber's office, or any form of assistance from the Bristol Myers Squibb sponsored Zeposia 360 Support Program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Zeposia\*

**AND**

**4** - Patient is not receiving Zeposia in combination with a targeted immunomodulator [e.g., adalimumab, Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab), Omvoh (mirikizumab-mrkz), Entyvio (vedolizumab)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist

### 3 . Background

#### **Benefit/Coverage/Program Information**

**Background:**

Zeposia (ozanimod) is a sphingosine 1-phosphate receptor modulator indicated for the treatment of relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults and moderately to severely active ulcerative colitis (UC) in adults.

**Additional Clinical Rules:**

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

|------------------------------------------------------------------------------|----------------|
| Product Name:OTC and Prescription Non-Formulary and Formulary Contraceptives |                |
| Approval Length                                                              | 12 month(s)    |
| Guideline Type                                                               | Administrative |
| <b>Approval Criteria</b>                                                     |                |

**1** - Requests to waive cost-sharing for a medication not included on a zero-cost-sharing coverage list must meet ALL of the following:

**1.1** Patient is using the prescribed drug for contraception

**AND**

**1.2** If the request is for a prescription product that is non-formulary, one of the following:

**1.2.1** There must be an appropriate clinical reason why the patient cannot take TWO (2) products that are covered at the \$0 preventative medications cost share+ (i.e., the patient has had an allergic reaction or intolerance to an inactive ingredient or has experienced an inadequate response)

**OR**

**1.2.2** Provider attests the non-formulary contraceptive drug is the preferred product for this patient (e.g., provider attestation that the non-formulary contraceptive is medically necessary, patient is stable on the requested non-formulary contraceptive, patient requires continuation of therapy to complete the course of treatment, transition to another agent could result in destabilization)

|       |                                                                                                                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | <p>If approved, authorizations should have overrides to allow for \$0 cost share for non-formulary or formulary drugs.</p> <p>+Products covered at the \$0 preventative medications cost share can be identified under the Status column of the Formulary Lookup Tool as having a status of “Zero Cost Share Preventative Drug”.</p> |

**Background:**

The Patient Protection and Affordable Care Act (PPACA) provides for \$0 cost share conditional coverage for contraceptives when used for contraception. Examples of covered products include: OTC contraceptive products (with prescription) including male and female condoms, spermicides, or sponges; OTC emergency contraceptive (with prescription) or prescription emergency contraceptive drug; Contraceptive patch; Contraceptive ring; Injectable contraceptives; Diaphragm or cervical caps; Contraceptive implant; Non-emergency oral contraceptives.

This policy applies to formulary drugs that process at a non-\$0 cost share or are non-formulary.

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Patient is 40 to 75 years old</p> |                |

**AND**

**2** - Patient has one or more cardiovascular disease (CVD) risk factors (e.g., dyslipidemia, diabetes, hypertension, smoking, etc.)

**AND**

**3** - Patient has a calculated 10-year risk of a cardiovascular event of 10% or greater

**AND**

**4** - Patient has no history of cardiovascular disease (i.e., symptomatic coronary artery disease or ischemic stroke)

**AND**

**5** - ONE of the following:

**5.1** The request is for a FORMULARY medication

**OR**

**5.2** BOTH of the following:

**5.2.1** The request is for a NON-FORMULARY medication

**AND**

**5.2.2** The patient must try and fail, or have specific medical reason(s) why the number of alternatives specified by the Non-Formulary Alternatives Table is not appropriate (see technician note for NF Alts Table URL)

### 3 . Background

#### Benefit/Coverage/Program Information

##### Background:

Zilbrysq (zilucoplan) is a complement inhibitor indicated for the treatment of generalized myasthenia gravis (gMG) in adult patients who are antiacetylcholine receptor (AChR) antibody positive. [1]

##### Additional Clinical Rules:

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.  
Supply limit may be in place.

## Approval Criteria

**1** - Diagnosis of seborrheic dermatitis

**AND**

**2** - Minimum duration of a 4-week trial and failure, contraindication, or intolerance to at least ONE of the following therapies:

Topical corticosteroids (e.g., betamethasone, hydrocortisone)

Topical, shampoo, or systemic antifungals (e.g., ketoconazole, ciclopirox, itraconazole)

Topical calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)

**AND**

**3** - Patient is not receiving Zoryve foam in combination with ANY of the following:

Biologic immunomodulator [e.g., Dupixent (dupilumab), Adbry (tralokinumab-ldrm)]

Janus kinase inhibitor [e.g., Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib), Opzelura (topical ruxolitinib), Cibinqo (abrocitinib)]

## 3 . Background

### Benefit/Coverage/Program Information

#### Background:

Zurzuva<sup>™</sup> is a neuroactive steroid gamma-aminobutyric acid (GABA) A receptor positive modulator indicated for the treatment of postpartum depression (PPD) in adults.

#### Additional Clinical Programs:

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.  
Supply limits may be in place.

### 3 . Background

#### Benefit/Coverage/Program Information

**Background:**

Zydelig (idelalisib) is a kinase inhibitor indicated for the treatment of patients with relapsed chronic lymphocytic leukemia (CLL), in combination with rituximab, in patients for whom rituximab alone would be considered appropriate therapy due to other co-morbidities. [1,2] The National Cancer Comprehensive Network (NCCN) also recommends the use of Zydelig as second-line and subsequent therapy as a single agent or in combination with rituximab for CLL/SLL with del(17p)/TP53 mutation in patients who have indications for treatment.[2]

**Additional Clinical Rules:**

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Supply limits may be in place.

| <p><b>Background</b></p> <p>Zykadia® (ceritinib) is a kinase inhibitor indicated for the treatment of patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC) as detected by an FDA-approved test. The National Cancer Comprehensive Network (NCCN) also recommends Zykadia as first-line therapy for ALK-positive advanced or metastatic NSCLC, for the treatment of inflammatory myofibroblastic tumor (IMT) with ALK translocation, in treatment of ALK-positive brain metastases from NSCLC, in the treatment of ALK-positive Erdheim-Chester Disease, advanced, recurrent, metastatic, or inoperable inflammatory myofibroblastic tumor (IMT) with positive ALK translocation, and ALK-positive relapsed or refractory anaplastic large cell lymphoma as palliative intent therapy or second-line and subsequent therapy.</p> <p><b>Additional Clinical Rules:</b></p> <p>Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.</p> <p>Supply limits may be in place.</p> |

| 2/6/2025 | Annual review. Removed ROS positive criteria from NSCLC as this is no longer an NCCN recommendation. Removed criteria for IMT which was duplicative as this is covered under soft tissue sarcomas. Updated background and reference. |
